Abstract	ix
Contents	xi
1 Introduction	1
2 Theory of kinetic models	5
2.1 Fundamentals	5
2.1.1 Models in different regimes	5
2.1.2 Transport equation	20
2.1.3 Boltzmann equation(s)	24
2.1.4 BGK equation(s) and their extensions	32
2.2 Multi-species BGK models with ν -dependent collision frequency	43
2.2.1 Motivation	43
2.2.2 A consistent BGK model with velocity-dependent collision frequency for gas mixtures	45
2.2.3 Cross sections and collision frequencies	53
2.3 Quantum multi-species BGK models	61
2.3.1 Fundamentals	61
2.3.2 A consistent multi-species quantum BGK model	66
3 Numerical schemes	81
3.1 Fundamentals	81
3.1.1 Time discretization	81
3.1.2 Space discretization	90
3.1.3 Velocity discretization	94
3.1.4 Existing schemes for BGK equations	99
3.2 Basic idea of our scheme	101
3.3 Time discretization	105
3.3.1 First-order splitting	106
3.3.2 First-order IMEX Runge-Kutta	106
3.3.3 Second-order Strang splitting	107
3.3.4 Second-order IMEX Runge-Kutta	108
3.3.5 General implicit solver	109
3.4 Space discretization	112
3.4.1 Numerical fluxes	113

3.5	Velocity discretization	114
3.5.1	Velocity grid	114
3.5.2	Quadrature and discrete moments	114
3.5.3	Optimization algorithm	115
4	Properties of the numerical scheme	117
4.1	Order and stability	117
4.2	Positivity of distribution functions	117
4.3	Time step restrictions	122
4.4	Conservation of mass, total momentum and total energy	123
4.5	Entropy inequality	126
5	Numerical Results	131
5.1	Proof of order	131
5.1.1	Transport equation	131
5.1.2	Relaxation test case	133
5.2	Num. results for the classic multi-species BGK model with const. coll. frequencies	134
5.2.1	Decay rates	134
5.2.2	Hydrogen-Carbon test case 1	134
5.2.3	Sulfur-Fluorine-Electrons test case	136
5.3	Num. results for the classic multi-species BGK model with v-dep. coll. frequencies	139
5.3.1	Illustrative toy problem	139
5.3.2	Hydrogen-Carbon test case 2	140
5.3.3	Sod problem	144
5.3.4	Mach 1.7 Shock wave problem	147
5.3.5	Mach 4 Shock wave problem	149
5.3.6	Interpenetration problem: high density	150
5.3.7	Interpenetration problem: low density	152
5.4	Numerical results for the quantum multi-species BGK model	154
5.4.1	Quantum decay rates	155
5.4.2	Sulfur-Fluorine-electrons quantum test case	157
6	Conclusions and Outlook	161
	Appendices	165
A	On damping of the electric field	165
A.1	Numerical fluxes	166
A.2	Determination of the force	167
A.3	Time step restrictions	167
A.4	Numerical tests	168
B	General implicit solver for 3 species	173
C	Pseudo codes	175
D	Units	178
D.1	CGS system	178
D.2	Units in the quantum case	179

E	List of symbols	180
F	Glossary of abbreviations	183
Bibliography		185
