

Contents

1. Introduction	1
2. Languages, Automata and Monadic Second-Order Logic	7
2.1. Words and Formal Languages	7
2.2. Finite Automata	14
2.3. Kleene's Theorem	21
2.4. Monadic Second-Order Logic for Words	26
2.5. The Büchi–Elgot–Trakhtenbrot Theorem	33
3. Weighted Automata	55
3.1. Semirings and Formal Power Series	56
3.2. Weighted Automata and Their Behavior	62
3.3. Linear Representations	76
4. The Kleene–Schützenberger Theorem	85
4.1. Operations on Formal Power Series	85
4.2. Rational Formal Power Series	95
4.3. The Kleene–Schützenberger Theorem	99
Closure Properties of Recognizable Formal Power Series	99
Weighted Automata and Linear Systems of Equations	108
5. Weighted Monadic Second-Order Logic and Weighted Automata	119
5.1. Syntax and Semantics	120
5.2. Results of Droste and Gastin	136
From Weighted Formulas to Weighted Automata	139
From Weighted Automata to Weighted Formulas	146
Locally Finite Semirings	153
6. Summary and Further Research	157
6.1. Summary	157
6.2. Further Research	164
A. Appendix	167
A.1. Model Theory and Monadic Second-Order Logic	167
A.2. Monadic Second-Order Logic for Words	176
References	181
Index	185
