Preface of the Book — IX

About the Authors — XI

Introduction to integral transforms — 1

- 1 Brief historical introduction — 1
- 2 Basic concepts and definitions — 2
- 3 Basic properties of integral transforms 3 — 3

1 Laplace transforms — 5

- 1.1 Introduction — 5
- 1.2 Definition of Laplace transforms — 5
- 1.3 Laplace transform of some elementary functions using definition — 6
 - 1.3.1 Linearity of Laplace transforms — 9
- 1.4 Existence conditions of Laplace transforms — 15
 - 1.4.1 Piecewise continuous functions — 15
 - 1.4.2 Sufficient conditions for existence of Laplace transforms — 16
- 1.5 Basic properties of Laplace transforms — 17
 - 1.5.1 Heaviside first shifting theorem (s -shifting theorem, first translation) — 17
 - 1.5.2 Change of scale property — 21
 - 1.5.3 Second shifting theorem — 23
- 1.6 Differentiation and integration of Laplace transform — 24
 - 1.6.1 Differentiation of Laplace transform (multiplication by t) — 24
 - 1.6.2 Integration of Laplace transform (division by t) — 27
- 1.7 Laplace transform of derivatives and integrals — 30
 - 1.7.1 Laplace transforms of derivatives — 30
 - 1.7.2 Laplace transform of integrals — 32
- 1.8 Initial and final value theorems — 33
 - 1.8.1 Initial value theorem — 33
 - 1.8.2 Final value theorem — 35
- 1.9 Laplace transform of periodic, Dirac delta, and unit step functions — 37
 - 1.9.1 Laplace transform of periodic functions — 37
 - 1.9.2 Unit step function or Heaviside's unit function — 40
 - 1.9.3 Dirac's delta function — 45
- 1.10 Inverse Laplace transform — 48
 - 1.10.1 Linearity property of inverse Laplace transform — 48

- 1.10.2 Standard results — 49
- 1.10.3 Partial fraction expansion — 52
- 1.10.4 Second shifting property for inverse Laplace transform — 56
- 1.10.5 Differentiation of $F(s)$ — 59
- 1.10.6 Inverse Laplace transform of integral — 61
- 1.10.7 Multiplication by s — 62
- 1.10.8 Division by s — 63
- 1.11 Convolution theorem — 64
- 1.11.1 Convolution of two functions — 64
- 1.11.2 Convolution theorem — 65

2 Applications of Laplace transforms — 71

- 2.1 Introduction — 71
- 2.2 Evaluation of definite integral using Laplace transforms — 71
- 2.3 Applications of Laplace transforms — 74
- 2.3.1 Solutions of ordinary differential equations — 74
- 2.3.2 Laplace transform in simple electric circuits — 84
- 2.3.3 Theory of automatic control — 86
- 2.3.4 Laplace transform in nuclear physics — 88
- 2.3.5 Laplace transform in control engineering — 88
- 2.3.6 Laplace transform in mechanics — 90
- 2.4 Solution of a system of linear ordinary differential equations — 93
- 2.4.1 System of first-order ordinary differential equations — 93
- 2.5 Solution of partial differential equations, and initial and boundary value problems — 101
- 2.6 Solution of integral equations — 107

3 Fourier series — 113

- 3.1 Introduction — 113
- 3.2 Periodic functions — 113
- 3.3 Orthogonality of functions — 113
- 3.3.1 Orthogonality of trigonometric functions — 113
- 3.4 Dirichlet's conditions for representation by a Fourier series — 117
- 3.5 Trigonometric Fourier series — 117
- 3.5.1 Fourier series of functions of period $2l$ — 119
- 3.5.2 Fourier series for discontinuous functions — 121
- 3.6 Fourier series of even and odd functions — 168
- 3.6.1 Even and odd functions — 169
- 3.7 Half-range Fourier series — 178

4	Fourier integral and Fourier transforms — 189
4.1	Introduction — 189
4.2	Fourier integral theorem — 189
4.3	Fourier integral — 191
4.3.1	Conditions of convergence — 192
4.4	Fourier sine and cosine integrals — 192
4.4.1	Fourier sine integral — 192
4.4.2	Fourier cosine integral — 192
4.5	Fourier's complex integral — 193
4.6	Fourier transforms — 202
4.6.1	Condition for convergence of Fourier transform — 203
4.7	Fourier sine and cosine transforms — 203
4.7.1	Fourier transforms of derivative of a function — 204
4.7.2	Some important properties of Fourier transforms — 205
4.8	Convolution theorem or Faltung theorem — 210
4.9	Relationship between Fourier transform and Laplace transform — 211
4.10	Inverse Laplace transforms by the method of residues — 221
5	Applications of Fourier transforms — 223
5.1	Introduction — 223
5.1.1	Some standard partial differential equations — 223
5.2	Procedure for the choice of transforms — 224
6	Z-transforms — 239
6.1	Introduction — 239
6.2	Definition and properties of Z-transforms — 240
6.2.1	Definition of Z-transforms — 240
6.2.2	Some important properties of Z-transforms — 240
6.2.3	Shifting to the right and left — 250
6.2.4	Derivative of Z-transforms — 251
6.3	Initial and final value theorem for Z-transform — 253
6.3.1	Initial value theorem — 253
6.3.2	Final value theorem — 253
6.4	Some useful Z-transforms — 255
6.5	Inverse Z-transforms — 256
6.5.1	Some useful inverse Z-transforms — 257

VIII — Contents

6.5.2	Inverse Z-transforms by partial fraction method —	257
6.6	Convolution theorem for Z-transforms —	258
6.6.1	Convolution of two sequences f_n and g_n —	258
6.6.2	Convolution theorem —	258
6.7	Inverse Z-transform using residue technique (the inversion integral method) —	260
6.8	Application of Z-transforms —	261

References — 265

Index — 267
