Preface — V

Preface for the 2nd edition — VII

1 The atom's structure I: Electrons and shells — 1

- 1.1 The philosophy of atoms — 1
- 1.2 The inner structure of the atom — 4
- 1.3 The shell and the nucleus — 7
- 1.4 Quantum mechanics — 17
- 1.5 Mathematical explanations of the BOHR atom model — 25
- 1.6 Outlook — 32

2 The atom's structure II: Nucleons and nucleus — 37

- 2.1 The neutron — 37
- 2.2 Nuclide notations and isotopes — 39
- 2.3 Conventional parameters of the nucleus — 42
- 2.4 Mass vs. energy of the nucleus: The mass defect — 52
- 2.5 Outlook — 57

3 Nucleons: Binding energy and shell structure — 59

- 3.1 Stable nuclides and the Chart of Nuclides — 59
- 3.2 Mass, mass defect, nucleon binding energy — 62
- 3.3 The liquid drop model — 68
- 3.4 The nuclear shell model — 77
- 3.5 Outlook — 91

4 From stable to unstable nuclides — 95

- 4.1 Unstable nuclei and the Chart of Nuclides — 95
- 4.2 Unstable nuclides on earth — 100
- 4.3 Outlook — 104

5 From stable to unstable nuclides: Mathematics — 105

- 5.1 Transformation parameters — 105
- 5.2 Correlations between radioactivity, number of unstable nuclides and masses — 111
- 5.3 Units of radioactivity — 119
- 5.4 Classes of radioactive transformations — 124
- 5.5 Outlook — 140

6	Processes of transformations: Overview — 145
6.1	Transformation processes overview — 145
6.2	Primary transformation pathways — 150
6.3	Energetics — 152
6.4	β -Transformation processes ($\Delta A = 0$) — 156
6.5	α -Emission, cluster emission, spontaneous fission processes ($\Delta A \neq 0$) — 164
6.6	Successive and simultaneous transformations — 168
6.7	Secondary transitions — 171
6.8	Post-processes — 175
6.9	Outlook — 176
7	β-Transformations I: Elementary particles — 177
7.1	Elementary particles — 177
7.2	Quarks — 182
7.3	Elementary particles relevant to β -transformations — 184
7.4	Quantum theory of β -transformation phenomena — 193
7.5	Outlook — 198
8	β-Transformations II: β^--process, β^+-process and electron capture — 199
8.1	Phenomenon — 199
8.2	Energetics of β -transformations — 201
8.3	Kinetic energetics of β -transformation products — 206
8.4	Velocities of β -transformations — 215
8.5	Selection rules — 219
8.6	Excited states — 227
8.7	Examples and applications — 229
8.8	Outlook — 235
9	α-Emission — 239
9.1	Introduction — 239
9.2	Mass balances in α -transformations — 241
9.3	Pathways of α -emission — 243
9.4	Energetics — 246
9.5	Velocities of α -transformation — 252
9.6	Quantum mechanics of α -transformation phenomena — 256
9.7	Excited states — 260
9.8	Example applications — 262
9.9	Outlook — 269

10	Spontaneous fission — 277
10.1	Introduction — 277
10.2	Occurrence of spontaneous fission — 278
10.3	Pathways of fission — 282
10.4	Energetics — 294
10.5	Velocities of spontaneous fission — 296
10.6	Follow-up processes of initial fission — 298
10.7	Example applications — 303
10.8	Outlook — 304
11	Secondary transformations — 307
11.1	From primary to secondary transformations — 307
11.2	Photon emission — 312
11.3	Conversion electrons — 326
11.4	Pair formation — 330
11.5	Energy and half life — 331
11.6	Example applications of photon emission — 334
11.7	Outlook — 341
12	Post-processes of primary and secondary transformations — 343
12.1	Post-processes paralleling primary and secondary nuclear transformations — 343
12.2	Post-processes due to the positron — 346
12.3	Vacancies of shell electrons — 354
12.4	Example applications of post-effects — 363
12.5	Outlook — 368
13	Nuclear reactions — 373
13.1	Artificially produced radionuclides — 373
13.2	General mechanism of nuclear reactions — 376
13.3	Energetics — 382
13.4	Yields of nuclear reaction products — 388
13.5	Radionuclide production using neutrons — 404
13.6	Radionuclide production using charged particles — 414
13.7	Outlook — 423
14	Appendix — 433
	Index — 451
