Preface — V

List of contributing authors — XIII

Seth Apollo and Ochieng Aoyi

**1 Performance and kinetics of a fluidized bed anaerobic reactor treating distillery effluent — 1**

- 1.1 Introduction — 1
- 1.2 Methodology — 2
  - 1.2.1 Experimental set up — 2
  - 1.2.2 Start-up and operation of the bioreactor — 3
  - 1.2.3 Experimental analysis — 3
- 1.3 Results and discussion — 4
  - 1.3.1 TOC and color removal efficiency — 4
  - 1.3.2 Substrate balance model — 4
  - 1.3.3 Biorecalcitrant component of distillery effluent — 6
  - 1.3.4 Substrate utilization kinetics — 7
  - 1.3.5 Michaelis–Menten kinetic model — 8
  - 1.3.6 The mean cell residence time — 9
  - 1.3.7 MCRT and HRT — 10
- 1.4 Conclusions — 11
- References — 12

Yetunde Bunmi Oyeyiola and Christianah Iyanuoluwa Adeosun

**2 Sustainability of ameliorative potentials of urea spiked poultry manure biochar types in simulated sodic soils — 15**

- 2.1 Introduction — 15
- 2.2 Materials and methods — 17
  - 2.2.1 Soil sampling, preparation and routine analysis — 17
  - 2.2.2 Soil sodicity simulation — 18
  - 2.2.3 Preparation of the poultry manure biochar co-pyrolyzed with or without urea — 18
  - 2.2.4 Treatments, experimental design and set up — 18
  - 2.2.5 Data collection — 18
- 2.3 Results — 19
  - 2.3.1 Effects of poultry manure biochar amendments on pH of a simulated sodic soil — 19
  - 2.3.2 Effects of poultry manure biochar amendments on exchangeable Ca, Mg and K in a simulated sodic soil — 20

- 2.3.3 Effects of poultry manure biochar amendments on exchangeable Na and sodium percentage (ESP) in a simulated sodic soil — 20
- 2.3.4 Effects of poultry manure biochar amendments on soil organic carbon in a simulated sodic soil — 21
- 2.3.5 Effects of poultry manure biochar amendments on soil available phosphorus in a simulated sodic soil — 21
- 2.3.6 Effects of poultry manure biochar on dry biomass weight of cowpea seedlings in a simulated sodic soil — 23
- 2.3.7 Regression model for the contributions of reduced soil pH following biochar amendment on selected soil properties in a simulated sodic soil — 23
- 2.4 Discussion — 24
- 2.5 Conclusions — 25
- References — 26

Mutua Maundu, Linda Ouma and Francis Maingi

- 3 Effects of alum, soda ash, and carbon dioxide on 40–50 year old concrete wastewater tanks — 29**
  - 3.1 Introduction — 29
  - 3.2 Experimental — 31
  - 3.3 Results and discussions — 31
    - 3.3.1 Iron ( $\text{Fe}^{3+}$ ) concentration — 33
    - 3.3.2 Aluminium concentration — 33
    - 3.3.3 Sulphate ion concentrations in the samples — 34
    - 3.3.4 Effect of carbonation on concrete tanks — 35
  - 3.4 Conclusions — 36
  - References — 36

Seth Apollo

- 4 A review of sludge production in South Africa municipal wastewater treatment plants, analysis of handling cost and potential minimization methods — 39**
  - 4.1 Introduction — 39
    - 4.1.1 Municipal wastewater generation in South Africa — 40
    - 4.1.2 Municipal wastewater treatment — 41
  - 4.2 Sludge management — 42
    - 4.2.1 Estimated sludge quantity and handling cost for WWTPs — 42
    - 4.2.2 Sludge disposal — 43
    - 4.2.3 Land application and Environmental impact of sewage sludge — 44
  - 4.3 Sludge minimization technologies in WWTPs — 44
    - 4.3.1 Chemical, mechanical, thermal and electrical methods of sludge reduction — 45

- 4.3.2 Integrated biological methods for WAS minimization — 46
- 4.4 Conclusions — 47
- References — 47

Chima F. Nnodum, Kafeelah A. Yusuf and Adedoja D. Wusu

**5 A comparison of two digestion methods and heavy metals determination in sediments — 51**

- 5.1 Introduction — 51
- 5.2 Materials and methods — 53
  - 5.2.1 Sampling and pre-treatment — 53
  - 5.2.2 Determination of pH, conductivity, and total organic matter — 54
  - 5.2.3 Conductivity — 54
  - 5.2.4 Organic matter — 54
  - 5.2.5 Digestion procedures — 54
  - 5.2.6 Digestion method 1 (HCl and Nitric acid) — 55
  - 5.2.7 Method 2 EPA method 3052 (Hydrofluoric acid – Nitric acid, Hydrochloric acid, Hydrogen peroxide) — 55
  - 5.2.8 Analysis of metals using Atomic absorption spectrophotometer — 55
- 5.3 Results and discussions — 55
- 5.4 Conclusions — 67
- References — 67

Peter Mensah, Temitope Osobamiro and Ponnadurai Ramasami

**6 Simultaneous remediation of polycyclic aromatic hydrocarbon and heavy metals in wastewater with zerovalent iron-titanium oxide nanoparticles (ZVI-TiO<sub>2</sub>) — 71**

- 6.1 Introduction — 72
- 6.2 Materials and methods — 72
  - 6.2.1 Study area — 72
  - 6.2.2 Collection of samples — 73
  - 6.2.3 Production of zerovalent iron (ZVI) — 73
  - 6.2.4 Production of titanium oxide nanoparticles (TiO<sub>2</sub>-NPs) — 73
  - 6.2.5 Production of zerovalent iron-titanium oxide nanoparticles (ZVI-TiO<sub>2</sub>) — 73
  - 6.2.6 Adsorption process — 73
- 6.3 Results and discussion — 74
  - 6.3.1 Percentage yield — 74
  - 6.3.2 Characterization of ZVI-TiO<sub>2</sub> NPs — 75
  - 6.3.3 Adsorption study — 76
- 6.4 Conclusions — 78
- References — 78

Francine Tsopjio Nkouam, Jean Momeni, Epse Abdourahman Fadimatou, Gaye Monde, Jean Paul Tsopmejio, Serge Raoul Tchamango and Martin Benoît Ngassoum

**7 Antioxidant and antibacterial activities of two xanthenes derivatives isolated from the leaves extract of *Anthocleista schweinfurthii* Gilg (Loganiaceae) — 81**

- 7.1 Introduction — 82
- 7.2 Material and methods — 83
  - 7.2.1 Chemical reagents and equipment — 83
  - 7.2.2 Bacterial strains — 83
  - 7.2.3 Plant material — 83
  - 7.2.4 Extraction and isolation of secondary metabolites swertiaperenin (1) and decussatin (2) — 83
  - 7.2.5 Evaluation of antioxidant activities — 84
  - 7.2.6 Antibacterial activity — 85
  - 7.2.7 Data analysis — 85
- 7.3 Results and discussion — 85
  - 7.3.1 Identification — 85
  - 7.3.2 Antioxidant activity — 88
  - 7.3.3 Antimicrobial activity — 90
- 7.4 Conclusions — 90
- References — 91

Marie Chan Sun, Marie A. S. Landinaff and Ruben Thoplan

**8 Use of biochemical markers for diabetes prevention in the new decade — 93**

- 8.1 Introduction — 94
- 8.2 Methods — 94
- 8.3 Results — 95
  - 8.3.1 Logistic regression analysis — 96
- 8.4 Discussion — 98
  - 8.4.1 Socio-demographic characteristics — 98
  - 8.4.2 Family and personal history — 99
  - 8.4.3 Lifestyle pattern — 99
  - 8.4.4 Strength and limitation — 100
  - 8.4.5 Recommendations — 100
- 8.5 Conclusions — 101
- References — 101

Tati Suhartati, Vicka Andini, Ilham Ramadhan, Yandri Yandri and Sutopo Hadi

**9 Cytotoxicity test and antibacterial assay on the compound produced by the isolation and modification of artonin E from *Artocarpus kemando* Miq. — 105**

- 9.1 Introduction — 105
- 9.2 Materials and methods — 107

- 9.2.1 Instrumentations and tools — 107
- 9.2.2 Materials — 108
- 9.2.3 Isolation — 108
- 9.2.4 Modifications of compound (1) using diazomethane — 108
- 9.3 Results and discussion — 109
  - 9.3.1 UV–Vis spectroscopy analysis — 109
  - 9.3.2 IR Spectroscopy analysis — 110
  - 9.3.3 Characterization of modified artonin E, compound 2 — 113
  - 9.3.4 Bioactivity — 116
  - 9.3.5 Anticancer Activity Test — 118
  - 9.3.6 Data Analysis — 119
  - 9.3.7 Antibacterial activity test — 119
- 9.4 Conclusions — 120
- References — 121

Noviany Noviany, Uswatun Hasanah, Puspa Dewi Lotulung and Sutopo Hadi  
**10 Antibacterial, antioxidant and cytotoxic activities of the stem bark of *Archidendron jiringa* (Jack) I.C. Nielsen — 123**

- 10.1 Introduction — 123
- 10.2 Experimental — 124
  - 10.2.1 Plant Materials — 124
  - 10.2.2 Extraction — 125
  - 10.2.3 Antibacterial Assay — 125
  - 10.2.4 Antioxidant Assay — 125
  - 10.2.5 Cytotoxicity screening — 125
- 10.3 Results and discussion — 125
  - 10.3.1 Antibacterial activity — 126
  - 10.3.2 Antioxidant activity — 129
  - 10.3.3 Toxicity activity — 129
- 10.4 Conclusions — 132
- References — 132

Noviany Noviany, Sutopo Hadi, Risa Nofiani, Puspa Dewi Lotulung, and Hasnah Osman  
**11 Fabaceae: a significant flavonoid source for plant and human health — 135**

- 11.1 Introduction — 135
- 11.2 Biosynthesis of Fabaceae flavonoids — 136
- 11.3 Biological activities of Fabaceae compounds — 140
- 11.4 Nutraceutical functions of Fabaceae compounds — 142
- 11.5 Conclusions — 143
- References — 144

Miroslava Nedyalkova, Julia Romanova, Ludmila Naneva and Vasil Simeonov

**12 Developing a questionnaire for diabetes mellitus type 2 risk effects and precondition factors – multivariate statistical paths — 147**

- 12.1 Introduction — 147
- 12.2 Materials and methods — 149
  - 12.2.1 Cluster analysis — 150
  - 12.2.2 Principal components analysis (PCA) — 150
  - 12.2.3 Questionnaire structure — 150
- 12.3 Results and discussion — 151
  - 12.3.1 Hierarchical clustering of the variables — 151
  - 12.3.2 K-means clustering (nonhierarchical clustering) of patients — 152
  - 12.3.3 Principal components analysis — 154
- 12.4 Conclusions — 157
- References — 158

Laura García, Ingrid Ruíz and José A. Gómez

**13 Chromatographic characterization of the fusion protein SARS-CoV-2 S protein (RBD)-hFc — 161**

- 13.1 Introduction — 161
- 13.2 Material and methods — 162
  - 13.2.1 Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE) — 162
  - 13.2.2 Western Blot — 162
  - 13.2.3 Size exclusion chromatography (SEC) — 163
  - 13.2.4 Isoelectric focusing (IEF) — 163
- 13.3 Results and discussion — 163
  - 13.3.1 Determination of the molecular weight — 163
  - 13.3.2 Establishment of the isoelectric point by IEF — 164
  - 13.3.3 Evaluation of the molecular integrity — 165
  - 13.3.4 Molecular integrity by SDS-PAGE — 166
  - 13.3.5 Molecular integrity by SEC-HPLC — 168
- 13.4 Conclusions — 170
- References — 171
