

Contents

1	Introduction	1
2	The Spin Crossover Effect	3
2.1	Introduction to the spin crossover effect.....	3
2.2	Spin transition curves and cooperativity.....	6
2.3	Influence of external stimuli on SCO compounds	8
2.4	Iron(II)-triazole polymers.....	10
3	Experimental techniques.....	13
3.1	Raman spectroscopy	13
3.2	Mössbauer effect and hyperfine interaction	15
3.2.1	The Mössbauer effect.....	15
3.2.2	Conventional Mössbauer spectroscopy	16
3.2.3	Hyperfine interactions.....	16
3.3	Nuclear Inelastic Scattering.....	18
3.4	Principle of pump-probe spectroscopy	22
4	Material and Methods.....	25
4.1	Investigated spin crossover materials	25
4.1.1	Fe-aminotriazole bulk powders.....	25
4.1.2	Fe-aminotriazole films	25
4.2	Experimental setup of Mössbauer, Raman and nuclear inelastic scattering experiments... 27	
4.2.1	Conventional ⁵⁷ Fe Mössbauer spectroscopy	27
4.2.2	Raman spectroscopy	28
4.2.3	Experimental Setup of nuclear inelastic scattering experiments.....	30
4.2.4	Experimental setup of the optical pump – nuclear inelastic scattering probe experiments.....	32
4.2.5	Film creation and mechanical deformation experiments	34
4.3	Data analysis.....	35
4.3.1	Calculation of the ⁵⁷ Fe partial phonon density of states.....	35
4.3.2	Detailed balance temperature calculations	35
4.3.3	Analysis of ⁵⁷ Fe Mössbauer spectra.....	36
4.3.4	Analysis of Raman spectra.....	36
4.3.5	Determination of the thermal spin crossover transition temperatures by Raman spectroscopy.....	37
4.4	Density functional theory	38

5	Spin crossover films as deformation sensors	39
5.1	Magnetic properties of bulk powder of 1 and film of 2	39
5.2	Vibrational properties of bulk powder of 1 and film of 2	40
5.2.1	Vibrational analysis of the Raman data.....	40
5.2.2	Vibrational analysis of the NIS data and DFT study.....	43
5.3	Mechanical deformation experiments on spin crossover films	49
5.4	Spin crossover films based on a novel synthesis with calcium	51
5.4.1	Vibrational analysis of the Raman data.....	51
5.4.2	Mechanical deformation experiments	53
6	Vibrational dynamics of photoexcited spin crossover transitions	55
6.1	Magnetic properties of bulk powder of 4	55
6.2	Vibrational properties of bulk powder of 4.....	57
6.2.1	Vibrational analysis of the Raman data.....	57
6.2.2	Vibrational analysis of the NIS data and DFT study.....	60
7	Optical Pump – Nuclear Inelastic Scattering Probe Experiments.....	65
7.1	Optical pump – NIS probe study of excited HS states with a laser power of 125 mW	66
7.2	DFT study of optically excited HS states with a laser power of 125 mW	69
7.3	Optical pump – NIS probe study of excited HS states with a laser power of 230 mW	74
7.4	DFT study of optically excited HS states with a laser power of 230 mW	76
8	Quantification of the cooperativity in SCO films	81
8.1	Magnetic properties of a film of 4.....	81
8.2	Vibrational properties of a film of 4.....	82
8.2.1	Vibrational analysis of the Raman data.....	82
8.2.2	Vibrational analysis of the NIS data.....	84
8.3	DFT study to characterize the cooperativity in SCO films	86
9	Conclusion and outlook	91
10	References	95
A	Appendix.....	107
	Publications	129
	Curriculum Vitae	131
