Contents

1 Introduction 1
- 1.1 Two Fundamental Properties 1
- 1.2 Different Possible Classifications 2
- 1.3 Part I: Motivation 3
- 1.4 Part II: Background – Metric and Measures 4
- 1.5 Part III: Background – Polyhedra and Convex Subsets 4
- 1.6 Part IV: Background – Classical Tools on Differential Geometry ... 5
- 1.7 Part V: On Volume 6
- 1.8 Part VI: The Steiner Formula 6
- 1.9 Part VII: The Theory of Normal Cycles 7
- 1.10 Part VIII: Applications to Curves and Surfaces 9

Part I Motivations

2 Motivation: Curves 13
- 2.1 The Length of a Curve 13
  - 2.1.1 The Length of a Segment and a Polygon 13
  - 2.1.2 The General Definition 14
  - 2.1.3 The Length of a C^1-Curve 15
  - 2.1.4 An Obvious Convergence Result 16
  - 2.1.5 Warning! Negative Results 16
- 2.2 The Curvature of a Curve 17
  - 2.2.1 The Pointwise Curvature of a Curve 17
  - 2.2.2 The Global (or Total) Curvature 19
- 2.3 The Gauss Map of a Curve 21
- 2.4 Curves in $\mathbb{E}^2$ 22
  - 2.4.1 A Pointwise Convergence Result for Plane Curves 22
  - 2.4.2 Warning! A Negative Result on the Approximation by Conics 22
  - 2.4.3 The *Signed* Curvature of a Smooth Plane Curve 24

2.4.4 The *Signed* Curvature of a Plane Polygon 26
2.4.5 Signed Curvature and Topology 27
2.5 Conclusion 28

3 Motivation: Surfaces 29
3.1 The Area of a Surface 29
3.1.1 The Area of a Piecewise Linear Surface 29
3.1.2 The Area of a Smooth Surface 29
3.1.3 Warning! The Lantern of Schwarz 30
3.2 The Pointwise Gauss Curvature 33
3.2.1 Background on the Curvatures of Surfaces 33
3.2.2 Gauss Curvature and Geodesic Triangles 34
3.2.3 The Angular Defect of a Vertex of a Polyhedron 36
3.2.4 Warning! A Negative Result 37
3.2.5 Warning! The Pointwise Gauss Curvature of a Closed Surface 39
3.2.6 Warning! A Negative Result Concerning the Approximation by Quadrics 40
3.3 The Gauss Map of a Surface 41
3.3.1 The Gauss Map of a Smooth Surface 41
3.3.2 The Gauss Map of a Polyhedron 42
3.4 The Global Gauss Curvature 43
3.5 The Volume 44

Part II Background: Metrics and Measures

4 Distance and Projection 47
4.1 The Distance Function 47
4.2 The Projection Map 49
4.3 The Reach of a Subset 52
4.4 The Voronoi Diagrams 55
4.5 The Medial Axis of a Subset 55

5 Elements of Measure Theory 57
5.1 Outer Measures and Measures 57
5.1.1 Outer Measures 57
5.1.2 Measures 58
5.1.3 Outer Measures vs. Measures 58
5.1.4 Signed Measures 59
5.1.5 Borel Measures 60
5.2 Measurable Functions and Their Integrals 60
5.2.1 Measurable Functions 60
5.2.2 Integral of Measurable Functions 61

5.3 The Standard *Lebesgue* Measure on $\mathbb{E}^N$ 62
5.3.1 Lebesgue Outer Measure on $\mathbb{R}$ and $\mathbb{E}^N$ 63
5.3.2 Lebesgue Measure on $\mathbb{R}$ and $\mathbb{E}^N$ 64
5.3.3 Change of Variable 64
5.4 Hausdorff Measures 65
5.5 Area and Coarea Formula 66
5.6 Radon Measures 67
5.7 Convergence of Measures 67

Part III Background: Polyhedra and Convex Subsets

6 Polyhedra 71
6.1 Definitions and Properties of Polyhedra 71
6.2 Euler Characteristic 74
6.3 Gauss Curvature of a Polyhedron 75

7 Convex Subsets 77
7.1 Convex Subsets 77
7.1.1 Definition and Basic Properties 77
7.1.2 The Support Function 79
7.1.3 The Volume of Convex Bodies 80
7.2 Differential Properties of the Boundary 81
7.3 The Volume of the Boundary of a Convex Body 82
7.4 The Transversal Integral and the Hadwiger Theorem 84
7.4.1 Notion of Valuation 84
7.4.2 Transversal Integral 85
7.4.3 The Hadwiger Theorem 86

Part IV Background: Classical Tools in Differential Geometry

8 Differential Forms and Densities on $\mathbb{E}^N$ 91
8.1 Differential Forms and Their Integrals 91
8.1.1 Differential Forms on $\mathbb{E}^N$ 91
8.1.2 Integration of N-Differential Forms on $\mathbb{E}^N$ 93
8.2 Densities 94
8.2.1 Notion of Density on $\mathbb{E}^N$ 94
8.2.2 Integration of Densities on $\mathbb{E}^N$ and the Associated Measure . 95

9 Measures on Manifolds 97
9.1 Integration of Differential Forms 97
9.2 Density and Measure on a Manifold 98
9.3 The Fubini Theorem on a Fiber Bundle 99

10 Background on Riemannian Geometry 101
10.1 Riemannian Metric and Levi-Civita Connexion 101
10.2 Properties of the Curvature Tensor 102
10.3 Connexion Forms and Curvature Forms 103
10.4 The Volume Form 103
10.5 The Gauss–Bonnet Theorem 104
10.6 Spheres and Balls 104
10.7 The Grassmann Manifolds 105
10.7.1 The Grassmann Manifold $G^o(N,k)$ 105
10.7.2 The Grassmann Manifold $G(N,k)$ 106
10.7.3 The Grassmann Manifolds $AG(N,k)$ and $AG^o(N,k)$ 107

11 Riemannian Submanifolds 109
11.1 Some Generalities on (Smooth) Submanifolds 109
11.2 The Volume of a Submanifold 112
11.3 Hypersurfaces in $\mathbb{E}^N$ 113
11.3.1 The Second Fundamental Form of a Hypersurface 113
11.3.2 k^{th}-Mean Curvature of a Hypersurface 114
11.4 Submanifolds in $\mathbb{E}^N$ of Any Codimension 115
11.4.1 The Second Fundamental Form of a Submanifold 115
11.4.2 k^{th}-Mean Curvatures in Large Codimension 116
11.4.3 The Normal Connexion 116
11.4.4 The Gauss–Codazzi–Ricci Equations 117
11.5 The Gauss Map of a Submanifold 118
11.5.1 The Gauss Map of a Hypersurface 118
11.5.2 The Gauss Map of a Submanifold of Any Codimension 118

12 Currents 121
12.1 Basic Definitions and Properties on Currents 121
12.2 Rectifiable Currents 122
12.3 Three Theorems 124

Part V On Volume

13 Approximation of the Volume 129
13.1 The General Framework 129
13.2 A General Evaluation Theorem for the Volume 131
13.2.1 Statement of the Main Result 131
13.2.2 Proof of Theorem 38 131
13.3 An Approximation Result 133
13.4 A Convergence Theorem for the Volume 135
13.4.1 The Framework 135
13.4.2 Statement of the Theorem 137

14 Approximation of the Length of Curves 139
14.1 A General Approximation Result 139
14.2 An Approximation by a Polygonal Line 140

15 Approximation of the Area of Surfaces 143
15.1 A General Approximation of the Area 143
15.2 Triangulations 144
15.2.1 Geometric Invariant Associated to a Triangle 144
15.2.2 Geometric Invariant Associated to a Triangulation 145
15.3 Relative Height of a Triangulation Inscribed in a Surface 145
15.4 A Bound on the Deviation Angle 146
15.4.1 Statement of the Result and Its Consequences 146
15.4.2 Proof of Theorem 45 147
15.5 Approximation of the Area of a Smooth Surface by the Area of a Triangulation 150

Part VI The Steiner Formula

16 The Steiner Formula for Convex Subsets 153
16.1 The Steiner Formula for Convex Bodies (1840) 153
16.2 Examples: Segments, Discs, and Balls 155
16.3 Convex Bodies in $\mathbb{E}^N$ Whose Boundary is a Polyhedron 158
16.4 Convex Bodies with Smooth Boundary 159
16.5 Evaluation of the Quermassintegrale by Means of Transversal Integrals 161
16.6 Continuity of the Φ_k 162
16.7 An Additivity Formula 164

17 Tubes Formula 165
17.1 The Lipschitz–Killing Curvatures 165
17.2 The Tubes Formula of Weyl (1939) 168
17.2.1 The Volume of a Tube 168
17.2.2 Intrinsic Character of the $\mathbb{M}_k$ 170
17.3 The Euler Characteristic 171
17.4 Partial Continuity of the Φ_k 171
17.5 Transversal Integrals 172
17.6 On the Differentiability of the Immersions 174

18 Subsets of Positive Reach 177
18.1 Subsets of Positive Reach (Federer, 1958) 177
18.2 The Steiner Formula 180
18.3 Curvature Measures 182
18.4 The Euler Characteristic 182
18.5 The Problem of Continuity of the Φ_k 184
18.6 The Transversal Integrals 186

Part VII The Theory of Normal Cycles

19 Invariant Forms 189
19.1 Invariant Forms on $\mathbb{E}^N \times \mathbb{E}^N$ 189
19.2 Invariant Differential Forms on $\mathbb{E}^N \times \mathbb{S}^{N-1}$ 190
19.3 Examples in Low Dimensions 192

20 The Normal Cycle 193
20.1 The Notion of a Normal Cycle 193
20.1.1 Normal Cycle of a Smooth Submanifold 194
20.1.2 Normal Cycle of a Subset of Positive Reach 194
20.1.3 Normal Cycle of a Polyhedron 195
20.1.4 Normal Cycle of a Subanalytic Set 196
20.2 Existence and Uniqueness of the Normal Cycle 196
20.3 A Convergence Theorem 198
20.3.1 Boundness of the Mass of Normal Cycles 199
20.3.2 Convergence of the Normal Cycles 199
20.4 Approximation of Normal Cycles 200

21 Curvature Measures of Geometric Sets 205
21.1 Definition of Curvatures 205
21.1.1 The Case of Smooth Submanifolds 206
21.1.2 The Case of Polyhedra 208
21.2 Continuity of the $\mathcal{M}_k$ 209
21.3 Curvature Measures of Geometric Sets 210
21.4 Convergence and Approximation Theorems 210

22 Second Fundamental Measure 213
22.1 A Vector-Valued Invariant Form 213
22.2 Second Fundamental Measure Associated to a Geometric Set 214
22.3 The Case of a Smooth Hypersurface 215
22.4 The Case of a Polyhedron 216
22.5 Convergence and Approximation 216
22.6 An Example of Application 217

Part VIII Applications to Curves and Surfaces

23 Curvature Measures in $\mathbb{E}^2$ 221
23.1 Invariant Forms of $\mathbb{E}^2 \times \mathbb{S}^1$ 221
23.2 Bounded Domains in $\mathbb{E}^2$ 221
23.2.1 The Normal Cycle of a Bounded Domain 221
23.2.2 The Mass of the Normal Cycle of a Domain in $\mathbb{E}^2$ 223
23.3 Plane Curves 224
23.3.1 The Normal Cycle of an (Embedded) Curve in $\mathbb{E}^2$ 224
23.3.2 The Mass of the Normal Cycle of a Curve in $\mathbb{E}^2$ 225

23.4 The Length of Plane Curves . . . 226
23.4.1 Smooth Curves . . . 226
23.4.2 Polygon Lines . . . 227
23.5 The Curvature of Plane Curves . . . 227
23.5.1 Smooth Curves . . . 227
23.5.2 Polygon Lines . . . 228

24 Curvature Measures in $\mathbb{E}^3$ . . . 231
24.1 Invariant Forms of $\mathbb{E}^3 \times \mathbb{S}^2$ . . . 231
24.2 Space Curves and Polygons . . . 231
24.2.1 The Normal Cycle of Space Curves . . . 231
24.2.2 The Length of Space Curves . . . 232
24.2.3 The Curvature of Space Curves . . . 233
24.3 Surfaces and Bounded Domains in $\mathbb{E}^3$ . . . 234
24.3.1 The Normal Cycle of a Bounded Domain . . . 234
24.3.2 The Mass of the Normal Cycle of a Domain in $\mathbb{E}^3$ . . . 235
24.3.3 The Curvature Measures of a Domain . . . 236
24.4 Second Fundamental Measure for Surfaces . . . 238

25 Approximation of the Curvature of Curves . . . 241
25.1 Curves in $\mathbb{E}^2$ . . . 241
25.2 Curves in $\mathbb{E}^3$ . . . 242

26 Approximation of the Curvatures of Surfaces . . . 249
26.1 The General Approximation Result . . . 249
26.2 Approximation by a Triangulation . . . 250
26.2.1 A Bound on the Mass of the Normal Cycle . . . 250
26.2.2 Approximation of the Curvatures . . . 251
26.2.3 Triangulations Closely Inscribed in a Surface . . . 252

27 On Restricted Delaunay Triangulations . . . 253
27.1 Delaunay Triangulation . . . 253
27.1.1 Main Definitions . . . 253
27.1.2 The Empty Ball Property . . . 254
27.1.3 Delaunay Triangulation Restricted to a Subset . . . 255
27.2 Approximation Using a Delaunay Triangulation . . . 256
27.2.1 The Notion of ε-Sample . . . 256
27.2.2 A Bound on the Hausdorff Distance . . . 256
27.2.3 Convergence of the Normals . . . 257
27.2.4 Convergence of Length and Area . . . 258
27.2.5 Convergence of Curvatures . . . 258

Bibliography . . . 261

Index . . . 265
