

Table of Contents

Summary	XIII
1 Introduction	1
2 Bayesian Statistics and MCMC Methods	9
2.1 Bayesian inference	9
2.2 MCMC methods	10
2.2.1 The Gibbs sampler	11
2.2.2 The Metropolis-Hastings algorithm	12
2.2.3 Dealing with the MCMC output	13
3 Bayesian Estimation of the GARCH(1, 1) Model with Normal Innovations	17
3.1 The model and the priors	17
3.2 Simulating the joint posterior	18
3.2.1 Generating vector α	20
3.2.2 Generating parameter β	20
3.3 Empirical analysis	22
3.3.1 Model estimation	24
3.3.2 Sensitivity analysis	30
3.3.3 Model diagnostics	32
3.4 Illustrative applications	34
3.4.1 Persistence	34
3.4.2 Stationarity	36
4 Bayesian Estimation of the Linear Regression Model with Normal-GJR(1, 1) Errors	39
4.1 The model and the priors	40
4.2 Simulating the joint posterior	41
4.2.1 Generating vector γ	41
4.2.2 Generating the GJR parameters	42
Generating vector α	43
Generating parameter β	44

4.3	Empirical analysis	44
4.3.1	Model estimation	46
4.3.2	Sensitivity analysis	52
4.3.3	Model diagnostics	52
4.4	Illustrative applications	53
5	Bayesian Estimation of the Linear Regression Model with Student-t-GJR(1, 1) Errors	55
5.1	The model and the priors	56
5.2	Simulating the joint posterior	59
5.2.1	Generating vector γ	59
5.2.2	Generating the GJR parameters	60
	Generating vector α	61
	Generating parameter β	62
5.2.3	Generating vector ϖ	62
5.2.4	Generating parameter ν	63
5.3	Empirical analysis	64
5.3.1	Model estimation	64
5.3.2	Sensitivity analysis	70
5.3.3	Model diagnostics	70
5.4	Illustrative applications	71
6	Value at Risk and Decision Theory	73
6.1	Introduction	73
6.2	The concept of Value at Risk	76
6.2.1	The one-day ahead VaR under the GARCH(1, 1) dynamics	77
6.2.2	The s -day ahead VaR under the GARCH(1, 1) dynamics	77
6.3	Decision theory	85
6.3.1	Bayes point estimate	85
6.3.2	The Linex loss function	86
6.3.3	The Monomial loss function	90
6.4	Empirical application: the VaR term structure	91
6.4.1	Data set and estimation design	92
6.4.2	Bayesian estimation	94
6.4.3	The term structure of the VaR density	95
6.4.4	VaR point estimates	96
6.4.5	Regulatory capital	100
6.4.6	Forecasting performance analysis	102
6.5	The Expected Shortfall risk measure	104
7	Bayesian Estimation of the Markov-Switching GJR(1, 1) Model with Student-t Innovations	109
7.1	The model and the priors	111
7.2	Simulating the joint posterior	115
7.2.1	Generating vector $\mathbf{s}$	117
7.2.2	Generating matrix P	118
7.2.3	Generating the GJR parameters	118

Generating vector α	120
Generating vector β	121
7.2.4 Generating vector ϖ	122
7.2.5 Generating parameter ν	122
7.3 An application to the Swiss Market Index	122
7.4 In-sample performance analysis	133
7.4.1 Model diagnostics	133
7.4.2 Deviance information criterion	134
7.4.3 Model likelihood	137
7.5 Forecasting performance analysis	144
7.6 One-day ahead VaR density	148
7.7 Maximum Likelihood estimation	152
8 Conclusion	155
A Recursive Transformations	161
A.1 The GARCH(1, 1) model with Normal innovations	161
A.2 The GJR(1, 1) model with Normal innovations	162
A.3 The GJR(1, 1) model with Student- t innovations	163
B Equivalent Specification	165
C Conditional Moments	171
Computational Details	179
Abbreviations and Notations	181
List of Tables	187
List of Figures	189
References	191
Index	201
