Modeling of Metal Forming and Machining Processes

by Finite Element and Soft Computing Methods

Contents

1	Metal Forming and Machining Processes.....	1
1.1	Introduction.....	1
1.2	Metal Forming.....	2
1.2.1	Bulk Metal Forming.....	2
1.2.2	Sheet Metal Forming Processes.....	17
1.3	Machining.....	23
1.3.1	Turning.....	24
1.3.2	Milling.....	28
1.3.3	Some Other Machining Processes.....	30
1.4	Summary.....	31
1.5	References.....	31
2	Review of Stress, Linear Strain and Elastic Stress-Strain Relations.....	33
2.1	Introduction.....	33
2.2	Index Notation and Summation Convention.....	35
2.3	Stress.....	41
2.3.1	Stress at a Point.....	41
2.3.2	Analysis of Stress at a Point.....	52
2.3.3	Equation of Motion.....	61
2.4	Deformation.....	64
2.4.1	Linear Strain Tensor.....	65
2.4.2	Analysis of Strain at a Point.....	75
2.4.3	Compatibility Conditions.....	82
2.5	Material Behavior.....	84
2.5.1	Elastic Stress-Strain Relations for Small Deformations.....	85
2.6	Summary.....	93
2.7	References.....	94
3	Classical Theory of Plasticity.....	95
3.1	Introduction.....	95
3.2	One-Dimensional Experimental Observations on Plasticity.....	97
3.3	Criteria for Initial Yielding of Isotropic Materials.....	107

3.3.1	von Mises Yield Criterion.....	108
3.3.2	Tresca Yield Criterion.....	110
3.3.3	Geometric Representation of Yield Criteria.....	111
3.3.4	Convexity of Yield Surfaces.....	114
3.3.5	Experimental Validation.....	115
3.4	Incremental Strain and Strain Rate Measures.....	121
3.4.1	Incremental Linear Strain Tensor.....	121
3.4.2	Strain Rate Tensor.....	125
3.4.3	Relation Between Incremental Linear Strain Tensor and Strain Rate Tensor.....	130
3.5	Modeling of Isotropic Hardening or Criterion for Subsequent Isotropic Yielding.....	134
3.5.1	Strain Hardening Hypothesis.....	136
3.5.2	Work Hardening Hypothesis.....	138
3.5.3	Experimental Validations.....	138
3.6	Plastic Stress-Strain and Stress-Strain Relations for Isotropic Materials.....	141
3.6.1	Associated Flow Rule.....	143
3.6.2	Elastic-Plastic Incremental Stress-Strain Relations for Mises Material.....	151
3.6.3	Elastic-Plastic Incremental Stress-Strain Rate Relation for Mises Material.....	153
3.6.4	Viscoplasticity and Temperature Softening.....	157
3.7	Objective Stress Rate and Objective Incremental Stress Tensors...	161
3.7.1	Jaumann Stress Rate and Associated Objective Incremental Stress Tensor.....	163
3.8	Unloading Criterion.....	168
3.9	Eulerian and Updated Lagrangian Formulations for Metal Forming Processes	170
3.9.1	Equation of Motion in Terms of Velocity Derivatives.....	170
3.9.2	Incremental Equation of Motion.....	172
3.9.3	Eulerian Formulation for Metal Forming Problems.....	173
3.9.4	Updated Lagrangian Formulation for Metal Forming Problems.....	182
3.10	Eulerian Formulation for Machining Processes.....	188
3.11	Summary	192
3.12	References.....	193
4	Plasticity of Finite Deformation and Anisotropic Materials and Modeling of Fracture and Friction.....	195
4.1	Introduction.....	195
4.2	Kinematics of Finite Deformation and Rotation.....	197
4.3	Constitutive Equation for Eulerian Formulation When the Rotation Is Not Small.....	207
4.3.1	Solution Procedure.....	210
4.4	Kinematics of Finite Incremental Deformation and Rotation.....	212

4.5	Constitutive Equation for Updated Lagrangian Formulation for Finite Incremental Deformation and Rotation.....	219
4.6	Anisotropic Initial Yield Criteria.....	223
4.6.1	Hill's Anisotropic Yield Criteria.....	226
4.6.2	Plane Stress Anisotropic Yield Criterion of Barlat and Lian.....	227
4.6.3	A Three-Dimensional Anisotropic Yield Criterion of Barlat and Co-workers.....	229
4.6.4	A Plane Strain Anisotropic Yield Criterion.....	236
4.7	Elastic-Plastic Incremental Stress-Strain and Stress-Strain Rate Relations for Anisotropic Materials.....	239
4.7.1	Elastic-Plastic Incremental Stress-Strain Relation for Anisotropic Materials.....	239
4.7.2	Elastic-Plastic Incremental Stress-Strain Rate Relation for Anisotropic Materials.....	243
4.8	Kinematic Hardening.....	247
4.9	Modeling of Ductile Fracture.....	252
4.9.1	Porous Plasticity Model of Berg and Gurson.....	252
4.9.2	Void Nucleation, Growth and Coalescence Model (Goods and Brown, Rice and Trace and Thomason Model).....	253
4.9.3	Continuum Damage Mechanics Models.....	257
4.9.4	Phenomenological Models.....	262
4.10	Friction Models.....	265
4.10.1	Wanheim and Bay Friction Model.....	266
4.11	Summary.....	268
4.12	References.....	269
5	Finite Element Modeling of Metal Forming Processes Using Eulerian Formulation.....	273
5.1	Introduction.....	273
5.2	Background of Finite Element Method.....	274
5.2.1	Pre-processing.....	274
5.2.2	Developing Elemental Equations.....	285
5.2.3	Assembly Procedure.....	292
5.2.4	Applying Boundary Conditions.....	295
5.2.5	Solving the System of Equations.....	296
5.2.6	Post-processing.....	296
5.3	Formulation of Plane-Strain Metal Forming Processes.....	297
5.3.1	Governing Equations and Boundary Conditions.....	298
5.3.2	Non-Dimensionalization.....	301
5.3.3	Weak Formulation.....	302
5.3.4	Finite Element Formulation.....	304
5.3.5	Application of Boundary Conditions.....	311
5.3.6	Estimation of Neutral Point.....	313
5.3.7	Formulation for Strain Hardening.....	315
5.3.8	Modification of Pressure Field at Each Iteration.....	316
5.3.9	Calculation of Secondary Variables.....	318

5.3.10	Some Numerical Aspects.....	319
5.3.11	Typical Results and Discussion.....	320
5.4	Formulation of Axisymmetric Metal Forming Processes.....	322
5.5	Formulation of Three-Dimensional Metal Forming Processes.....	331
5.6	Incorporation of Anisotropy.....	331
5.7	Elasto-Plastic Formulation.....	334
5.8	Summary.....	341
5.9	References.....	341
6	Finite Element Modeling of Metal Forming Processes Using Updated Lagrangian Formulation.....	345
6.1	Introduction.....	345
6.2	Application of Finite Element Method to Updated Lagrangian Formulation.....	347
6.2.1	Governing Equations.....	347
6.2.2	Integral Form of Equilibrium Equation.....	349
6.2.3	Finite Element Formulation.....	351
6.2.4	Evaluation of the Derivative.....	356
6.2.5	Iterative Scheme.....	365
6.2.6	Determination of Stresses.....	368
6.2.7	Divergence Handling Techniques.....	371
6.3	Modeling of Axisymmetric Open Die Forging by Updated Lagrangian Finite Element Method.....	372
6.3.1	Domain and Boundary Conditions.....	374
6.3.2	Cylindrical Arc Length Method for Displacement Control Problems.....	377
6.3.3	Friction Algorithm.....	380
6.3.4	Convergence Study and Evaluation of Secondary Variables.....	382
6.3.5	Validation of the Finite Element Formulation.....	382
6.3.6	Typical Results.....	384
6.3.7	Residual Stress Distribution.....	388
6.3.8	Damage Distribution, Hydrostatic Stress Distribution and Fracture.....	393
6.4	Modeling of Deep Drawing of Cylindrical Cups by Updated Lagrangian Finite Element Method.....	396
6.4.1	Domain and Boundary Conditions.....	399
6.4.2	Contact Algorithm.....	405
6.4.3	Typical Results.....	406
6.4.4	Anisotropic Analysis, Ear Formation and Parametric Studies.....	408
6.4.5	Optimum Blank Shape.....	416
6.5	Summary.....	419
6.6	References.....	420
7	Finite Element Modeling of Orthogonal Machining Process.....	425
7.1	Introduction.....	425

7.2	Domain, Governing Equations and Boundary Conditions for Eulerian Formulation.....	426
7.2.1	Domain.....	426
7.2.2	Governing Equations.....	428
7.2.3	Boundary Conditions.....	429
7.3	Finite Element Formulation.....	431
7.3.1	Integral Form.....	431
7.3.2	Approximations for Velocity Components and Pressure..	433
7.3.3	Finite Element Equations.....	436
7.3.4	Application of Boundary Conditions, Solution Procedure and Evaluation of Secondary Quantities.....	440
7.4	Results and Discussion.....	442
7.4.1	Validation of the Formulation.....	444
7.4.2	Parametric Studies.....	444
7.4.3	Primary Shear Deformation Zone, Contours of Equivalent Strain Rate and Contours of Equivalent Stress.....	445
7.5	Summary.....	447
7.6	References.....	448
8	Background on Soft Computing.....	451
