

Sanat K. Chatterjee

Crystallography and the World of Symmetry

With 104 Figures

Springer

Contents

1	Pattern	1
1.1	Pattern: An Introduction	1
1.2	Summary	7
	References	7
2	Lattices	9
2.1	Plane Lattice	9
2.2	Space Lattice	12
2.3	Lattice Planes and Miller Indices	12
2.4	Lattice Directions	13
2.5	Summary	14
	References	14
3	Symmetry in Lattices	15
3.1	Symmetry Operations in Plane Lattices	15
3.1.1	Rotational Symmetry	15
3.1.2	Mirror Plane of Symmetry	16
3.1.3	Centre of Symmetry	19
3.2	Symmetry Operation in Space Lattices	19
3.2.1	Rotation Inversion (Rotary Inversion) Symmetry	19
3.3	Summary	21
	References	21
4	Crystal Symmetry (Crystal Pattern): I	23
4.1	Macroscopic Symmetry Elements	23
4.2	Thirty-Two Point Groups of Symmetries in Hermann–Mauguin Notations	24
4.3	Crystal Systems	27
4.4	Bravais Lattices	28
4.5	Summary	33
	References	33

5	Crystal Symmetry (Crystal Pattern): II	35
5.1	Microscopic Symmetry Elements in Crystals	35
5.2	Space Groups	40
5.3	Constitution of Space Groups	42
5.4	Summary	42
	References	42
6	Crystals and X-Ray	43
6.1	Production and Properties of X-Ray	43
6.2	Laue Equations	45
6.3	Bragg's Law	47
6.4	Reciprocal Lattice	47
6.5	Geometry of X-Ray Diffraction: Use of Reciprocal Lattice	50
6.6	The Interplanar Distance (d -Spacing) of Different Crystal Systems	53
6.7	Weighted Reciprocal Lattice	55
6.8	Summary	56
	References	56
7	Experimental Methods for Structure Analysis:	
	X-Ray Diffraction Techniques	57
7.1	Experimental Techniques for Single Crystal	57
7.1.1	Laue Camera and Laue Pattern	57
7.1.2	Rotation/Oscillation Camera and the Applications	60
7.1.3	Weissenberg Camera and Moving Film Technique	64
7.1.4	de Jong-Boumann and Precession Camera	68
7.2	Experimental Techniques for Polycrystals	70
7.3	Debye-Scherrer Cylindrical Powder Camera:	
	The Plan View	72
7.4	Indexing of the Debye-Scherrer Pattern	73
7.4.1	Cubic Systems	73
7.4.2	Tetragonal System	73
7.4.3	Hexagonal System	74
7.4.4	Orthorhombic System	74
7.4.5	Monoclinic and Triclinic Systems	75
7.5	Summary	75
	References	75
8	Determination of Space Group and Crystal Structure	77
8.1	Determination of Space Group from Data Obtained from Moving Film	77
8.1.1	Weissenberg Photographs	77
8.2	Determination of Crystal Structure	79
8.2.1	Trial-and-Error Method	79

8.2.2	The Electron Density Equation and Patterson Function	80
8.3	Summary	83
	References	84
9	The World of Symmetry	85
9.1	Symmetry in Living Bodies	86
9.2	Symmetry in Patterns, Snow Flakes, and Gems	89
9.3	Symmetry in Architecture	91
9.4	Symmetry in Fundamental Particles	91
9.5	Symmetry (Invariance) of Physical Laws	95
9.6	Summary	98
	References	99
10	Asymmetry in Otherwise Symmetrical Matter	101
10.1	Single Crystals, Poly Crystals, and Asymmetry–Symmetry	101
10.2	A Symmetry in Asymmetry I: Quasi Crystalline State of Matter	106
10.3	A Symmetry in Asymmetry II: Liquid Crystalline Phase	111
10.3.1	Optical Study of Liquid Crystals	114
10.3.2	Effect of Electric Field on Nematic Liquid Crystal (Electro-Optical Effect)	116
10.4	Symmetry Down to the Bottom: The Nanostructures	116
10.5	Summary	126
	References	126
	Epilogue	127
A	An Outline of the Diffraction Theory of Periodic and Aperiodic Structures	129
	References	135
B	Solved Problems	137
	Further Reading	145
	Index	147
