

Contents

1. Introduction	1
2. Concepts of unification	9
2.1. Elements of actual theories	15
3. Unique Root, a new approach	21
3.1. Physics in six dimensions	25
3.1.1. Klein-Gordon equation	25
3.1.2. Dirac equation	26
3.1.3. Lagrange density and Hamilton's principle	28
3.2. From six to four dimensions	33
3.2.1. Assigned spacetime	35
3.2.2. Necessity of a Euclidean space . . .	36
3.2.3. Coordinates	38
3.2.3.1. Emphasized coordinates .	39
3.2.4. Transition to four dimensions	39
4. Deducting particle physics	43
4.1. Free particles and particle mass	44
4.1.1. Dispersion relation and conserva- tion of energy	45
4.1.2. Bondary conditions and particle mass	46
4.2. Maxwell's equations	48
4.3. Bosonic forces and mass of bosons	49
4.4. Systematics of fermions	51
4.5. Fermions in an external field	53

5. Theory of Everything	55
6. Gravitation	61
6.1. Metric of assigned spacetime	63
6.2. Noninterpretable Lagrangian	65
6.3. Interpretable Lagrangian	68
6.3.1. Impossibility of adaption in a Euclidean space	68
6.3.2. Adaption in a curved spacetime . .	70
6.3.2.1. S-type adaption	73
6.3.2.2. N-type adaption	75
6.3.3. Comparing S- and N-type solution .	77
7. Effects of gravitation on particles	79
7.1. Slowly moving particles with rest mass . . .	80
7.1.1. Elementary particles in a gravitational field	83
7.1.2. Classical particles in a gravitational field	84
7.1.3. Planet orbits and perihelion rotation	85
7.2. Particles without rest mass	86
7.2.1. Light deflection	86
7.2.2. Shapiro effect	87
7.2.3. Redshift and time dilation	88
7.3. Barycentric coordinate time	90
7.4. Gravitation in matter	90
7.5. Some conclusions	92
7.5.1. Identification of terms	92
7.5.2. Absence of feedback	92
7.5.3. Principle of equivalence	93
7.5.4. Classical mechanics	93
7.6. Particles interacting by gravity	94

8. Quantum gravitation	97
8.1. Planet orbits II	98
8.1.1. Eccentricity and perihelion rotation	98
8.1.2. Disk structure	100
8.2. Structure of a solar system	101
9. New interpretation of physical quantities	105
9.1. Bohr versus Einstein	105
9.1.1. Measurement	107
9.1.2. Particles	108
9.2. Wave function	110
9.2.1. De Broglie's box paradoxon	111
9.2.2. Double-slit experiment	112
9.2.3. EPR experiment	114
9.2.4. Schrödinger's cat	115
9.2.5. Bound states	116
10. Consequences of the new interpretations	117
10.1. Matter	117
10.2. Dark Matter	119
10.3. Black holes	120
11. Closing remarks	123
A. Cosmology	127
A.1. Metrics of the early phase	127
A.2. Cosmic effects	131
A.2.1. Inflation	132
A.2.2. Isotropy of background radiation . .	132
A.2.3. Trigger of gravity waves	133
A.2.4. Cosmological redshift and dark energy	133
Bibliography	135
