Preface	vii
Clemens Fuchs	
On some applications of Diophantine approximations	1
1 Part I: On transcendental numbers	8
1 Tools from complex analysis	8
2 Tools from arithmetic	19
3 The transcendence of $J_0(\xi)$	27
4 Further applications of the method	31
2 Part II: On Diophantine equations	47
1 Equations of genus 0	52
2 Ideals in function fields and number fields	54
3 Equations of genus 1	59
4 Auxiliary means from the theory of ABEL functions	61
5 Equations of arbitrary positive genus	65
6 An application of the approximation method	68
7 Cubic forms with positive discriminant	74
Carl L. Siegel	
Über einige Anwendungen diophantischer Approximationen	81
Clemens Fuchs and Umberto Zannier	
Integral points on curves:	
Siegel's theorem after Siegel's proof	139
1 Introduction	139
2 Some developments after Siegel's proof	139
3 Siegel's Theorem and some preliminaries	144
4 Three arguments for Siegel's Theorem	145
References	154
