Preface — VII

Acknowledgments — XI

1 Analytic functions — 1

- Analytic continuation — 1
- Differentiation under the Integral sign — 3
- Infinite products — 11
- Blaschke products — 16
- Sequences of analytic functions — 19
- Local boundedness — 21
- Equicontinuity — 22
- Möbius transformations — 23

2 Entire functions — 28

- Elementary factors — 28
- Genus/canonical product — 31
- Order — 33
- Relation to counting function — 35
- Exponent of convergence — 36
- Hadamard factorization theorem — 37
- Laguerre theorem — 41

3 Meromorphic functions — 43

- Classical theory — 43
 - Laurent series — 43
 - Elliptic functions — 48
 - Weierstrass $\wp$ -function — 51
 - Differential equation — 54
 - Addition formula — 57
 - Elliptic modular function — 58
 - Riemann sphere — 60
 - Spherical metric — 60
 - Spherical derivative — 64
- Nevanlinna theory — 65
 - Poisson–Jensen formula — 65
 - Counting function — 67
 - Proximity function — 68
 - Characteristic function — 69
 - Order — 73

Cartan theorem —	73
Ahlfors–Shimizu characteristic —	76
Functions of bounded characteristic —	77
Second fundamental theorem —	79

4 Normal families — 83

Analytic functions —	83
Normality/compactness —	83
Montel theorem —	84
Fundamental normality test —	90
Meromorphic functions —	97
Equicontinuity —	97
Marty theorem —	98
Bloch principle —	101
Normal and Bloch functions —	107

5 Hyperbolic geometry — 109

Playfair Axiom —	109
Bolyai/Lobachevsky —	109
Poincaré disk model —	112
Poincaré metric —	113
Hyperbolic length/area —	114
Möbius transformations —	116
Half-plane model —	119
Gauss–Bonnet formula —	124
Minkowski spacetime —	126

6 Univalent functions — 129

Area Theorem —	129
Length–area relations —	130
Schlicht class $\mathcal{S}$ —	132
Koebe function —	132
Bieberbach conjecture —	133
Typically real functions —	133
Historical attempts —	134
De Branges —	135
Robertson conjecture —	136
Milin conjecture —	137
Complementary class Ξ —	138
Grönwall area theorem —	138
Koebe distortion theorem —	141
Bloch theorem —	143

Univalent polynomials — 146

Normal functions — 147

7 Harmonic functions — 148

Fundamentals — 148

Poisson formula — 149

Dirichlet integral/mixed Dirichlet Integral — 155

Dirichlet principle — 157

Liouville-type theorem — 161

Continuous functionals — 162

Green's function — 166

Solution to Dirichlet problem via Green's function — 167

Harmonic measure — 170

Random walks — 173

Positive harmonic functions/class $h^1(U)$ — 175

Harnack inequality — 175

Herglotz theorem — 175

Radial limits — 178

Normal families of harmonic functions — 181

Harnack principle — 183

Schottky theorem for harmonic functions — 184

Julia theorem for harmonic functions — 184

8 Subharmonic/superharmonic functions — 186

Submean value properties — 187

Growth rate/integral means — 190

Laplacian — 192

Growth rate/subharmonic functions — 195

Growth rate/superharmonic functions — 195

Poisson extension — 196

Perron method — 197

Barrier/regular points — 199

Harmonic measure extension — 202

9 Iteration of rational mappings — 204

Rational functions — 204

Orbits — 205

Conjugates — 205

Iteration of Möbius transformations — 207

One fixed point (parabolic case: $\tau^2 = 4$) — 207

Two fixed points — 208

Julia and Fatou sets — 210

Exceptional points — 212
Basic properties of J_R — 214
Mandelbrot set — 218
Critical points — 219
No wandering domains — 221
Newton–Raphson method — 221

10 Analytic number theory — 223

Gamma function — 223
Beta function — 230
Riemann zeta function — 233
Riemann functional equation — 235
Riemann hypothesis — 241
 Prime number theorem — 241
 Relation to quantum mechanics — 242
Euler product formula — 244
Möbius function — 245
Mertens conjecture — 247
Möbius inversion — 249
Arithmetic Fourier transform — 251
Discrete Fourier transform — 254
Laplace transform — 256
Inverse Laplace transform — 260
Computing the inverse Laplace transform via residues — 262

Bibliography — 269

Index — 271
