Acknowledgements — VII

Preface — IX

Editors' biography — XV

Chapter 1

Introduction to multi-criteria decision-making process — 1

- 1.1 Normalization/standardization — 4
- 1.2 Weighted sum model and weighted product model — 9
- 1.3 Weighted aggregated sum product assessment (WASPA) — 11
- 1.4 Discussion and interpretation — 12
- References — 12

Section 1: Determination of criteria weights

Chapter 2

Determining weights using analytic hierarchy process (AHP) — 15

- 2.1 Discussion and interpretation — 19
- References — 19

Chapter 3

Weight determination using best-worst method — 21

- 3.1 Discussion and interpretation — 24
- References — 24

Chapter 4

CRITIC method for weight determination — 25

- 4.1 Discussion and interpretation — 30
- References — 30

Chapter 5

Entropy method for weight determination — 31

- 5.1 Discussion and interpretation — 35
- References — 35

Section 2: Finding the ranking of alternatives

Chapter 6

Additive ratio assessment (ARAS) for best alternative selection — 39

6.1 Application of ARAS in literature — 39

6.2 Discussion and interpretation — 43

References — 43

Chapter 7

Combinative distance-based assessment (CODAS) for decision-making — 45

7.1 Applications of CODAS — 45

7.2 Discussion and interpretation — 50

References — 51

Chapter 8

Application of complex proportional assessment (COPRAS) for filtering — 53

8.1 Discussion & interpretation — 57

References — 58

Chapter 9

Utilizing evaluation based on distance from average solution (EDAS) for decision-making — 59

9.1 Discussion and interpretation — 62

References — 63

Chapter 10

Grey Relational Analysis (GRA) for optimal model selection — 65

10.1 Discussion and interpretation — 69

References — 69

Chapter 11

Using multi-objective optimization based on ratio analysis for decision-making — 71

11.1 MOORA (ratio technique) — 71

11.2 MOORA (reference point technique) — 74

11.3 Discussion and interpretation — 76

References — 76

Chapter 12**Preference Ranking Organization Method for Enrichment Evaluation (PROMETHEE-I and II) — 79**

- 12.1 Final ranking of alternatives (PROMETHEE-I method) — 85
- 12.2 Final ranking of alternatives (PROMETHEE-II method) — 86
- 12.3 Discussion and interpretation — 87
- References — 87

Chapter 13**Preference Selection Index (PSI) for optimal alternative selection — 89**

- 13.1 Discussion and interpretation — 94
- References — 94

Chapter 14**Utilizing simple additive weighting (SAW) method for managerial discretion — 95**

- 14.1 Applications of SAW — 95
- 14.2 Discussion and interpretation — 99
- References — 99

Chapter 15**Technique for Order Preference by Similarity to Ideal Solution (TOPSIS) for best model selection — 101**

- 15.1 Discussion and interpretation — 105
- References — 105

Chapter 16**ViseKriterijumska Optimizacija I Kompromisno Resenje (VIKOR) for optimal model selection — 107**

- 16.1 Discussion and interpretation — 111
- References — 111

Section 3: Some other useful MCDM techniques**Chapter 17****Analytic Network Process (ANP) method — 115**

- 17.1 Discussion and interpretation — 121
- References — 122

XIV — Contents

Chapter 18

Selecting best alternative through Data Envelopment Analysis (DEA) method — 123

18.1 Discussion and interpretation — 135

References — 135

Chapter 19

Decision-making trial and evaluation laboratory method — 137

19.1 Discussion and interpretation — 141

References — 141

Index — 143
