 Part I Bulk Properties of Strongly Interacting Matter	
1 Introduction	41
2 QCD and its thermodynamics	47
2.1 QCD and its symmetries	47
2.1.1 QCD basics	47
2.1.2 Systematic approaches and models	53
2.1.3 Symmetries of QCD	56
2.2 Phases of QCD	65
2.2.1 General thermodynamics	65
2.2.2 Types of phase transitions	74
2.2.3 QCD phase diagram at low temperatures	81
2.2.4 QCD transitions and chiral symmetry	85
2.2.5 Universality and QCD transitions	89
2.2.6 Order parameters and changes in the symmetry pattern	92
3 Equation of state and phase boundaries of strongly interacting matter	101
3.1 The coupling constant expansion of the QCD pressure	101
3.1.1 Perturbative expansion at high temperatures	102
3.1.2 Quark mass effects and pressure in real QCD	104
3.1.3 Beyond perturbation theory	107
3.1.4 Resummation methods	108

3.1.5	Perturbative expansion at finite chemical potential . . .	111
3.1.6	Summary of the present status	114
3.2	Thermodynamic properties from lattice QCD	116
3.2.1	Lattice formulation	117
3.2.2	Lattice methods at finite chemical potential	119
3.2.3	The equation of state from lattice QCD	124
3.2.4	The transition temperature at vanishing chemical potential	132
3.2.5	Results for the location of the transition line and of the critical point	133
3.2.6	Generalized susceptibilities and fluctuations	138
3.2.7	Further discussion	142
3.3	The nuclear equation of state from many-body theory	146
3.3.1	Models for the nuclear equation of state	146
3.3.2	Equation of state in symmetric and asymmetric nuclear matter	151
3.3.3	Connection to QCD	155
3.3.4	Summary of the present status	156
3.4	Compact star constraints on the high-density equation of state	158
3.4.1	Constraints from bulk properties	162
3.4.2	Constraints from compact star cooling	173
3.4.3	Relation to nuclear collisions	178
3.4.4	Summary	181
3.5	Color superconducting phases of QCD matter	182
3.5.1	Color superconductivity at asymptotically large densities	183
3.5.2	Color superconductivity at intermediate densities	188
3.5.3	Color superconductivity at low densities: Bose-Einstein condensation of diquark molecules	194
4	Model descriptions of strongly interacting matter near deconfinement	197
4.1	Statistical model and particle production in heavy-ion collisions	197
4.1.1	Statistical approach – grand canonical formalism	198
4.1.2	Canonical formulation of strangeness conservation	200
4.1.3	Model description of experimental data	202
4.2	Hadronic resonances – important degrees of freedom below deconfinement	209
4.2.1	Charge density fluctuations in a hadronic medium	210
4.2.2	Charge density fluctuations in lattice gauge theory	212
4.2.3	Lattice gauge theory results and hadron resonance gas predictions	212
4.3	The QCD equation of state near the transition line within a quasi-particle model	215

4.3.1	Basic relations	216
4.3.2	Concept of quasi-particles	216
4.3.3	The Rossendorf quasi-particle model at vanishing chemical potential	217
4.3.4	Baryon density effects and susceptibilities	220
4.3.5	A family of equations of state	223
4.3.6	The critical end point	224
4.4	Wilson line degrees of freedom and deconfinement	228
4.4.1	Pure Yang-Mills $SU(N)$ gauge theory	229
4.4.2	QCD: finite pion masses	233
4.5	Phase diagram and thermodynamics of the PNJL and PQM models	237
4.5.1	The NJL model	237
4.5.2	Introducing the PNJL model	239
4.5.3	Parameter fixing	241
4.5.4	Thermodynamics at finite chemical potential	243
4.5.5	Phase diagram	247
4.5.6	The Polyakov-quark-meson model	249
4.5.7	Quark-meson parameters	251
4.5.8	Polyakov-loop potential parameters	252
4.5.9	Phase structure and thermodynamic variables	254
4.5.10	Summary of the present status	258
4.6	Probing the QCD phase boundary with fluctuations	260
4.6.1	Charge density fluctuations near the critical end point	260
4.6.2	Charge density fluctuations in the presence of spinodal phase separation	262
4.7	The renormalization group method and the critical structure of QCD medium	266
4.7.1	Renormalization group methods	267
4.7.2	QCD in an RG framework	275
4.7.3	The phase diagram of the quark-meson model	281
4.7.4	Summary of the present status	285
4.8	Strongly coupled quark gluon plasma	286
4.8.1	Why is it strongly coupled?	286
4.8.2	Radial, elliptic and conical flows	288
4.8.3	Classical strongly coupled non-Abelian plasmas	290
4.8.4	Quantum mechanics of the quasiparticles	292
4.8.5	The magnetic side of sQGP and confinement	293
4.8.6	AdS/CFT correspondence and conformal sQGP	298
4.8.7	AdS/CFT correspondence predictions for sQGP	301
5	Summary	307
	References	313

Part II In-Medium Excitations

1	Introduction	337
2	Electromagnetic probes and light vector mesons	343
2.1	Brief overview of experimental status and interpretation	344
2.2	Emissivity of strongly interacting matter	345
2.2.1	Electromagnetic correlation function and thermal emission rates	345
2.2.2	Electromagnetic spectral function in vacuum	346
2.2.3	Low-density expansions and chiral mixing	349
2.3	Sum rules	350
2.3.1	QCD sum rules	351
2.3.2	Chiral sum rules and axialvector spectral function	360
2.4	Vector mesons in medium: hadronic models	364
2.4.1	ρ meson	366
2.4.2	ω meson	382
2.4.3	ϕ meson	384
2.5	Thermal dilepton rates	386
2.5.1	Lattice QCD	386
2.5.2	Hadronic approaches	388
2.5.3	RG approach: vector manifestation	390
2.6	Thermal photon rates	392
2.6.1	Direct single photons	392
2.6.2	Diphotons and in-medium “ σ ”	395
3	Hadronic resonance spectroscopy	401
3.1	Meson resonances	402
3.2	Baryon resonances	404
3.2.1	Chiral symmetry of baryons	405
3.2.2	Baryon masses and QCD condensates	405
3.2.3	Baryon resonance decays in heavy-ion collisions	407
4	Strangeness	411
4.1	Kaons in dense matter	412
4.1.1	Mean field dynamics	412
4.1.2	Effects non-linear in density	413
4.1.3	Coupled channel dynamics	416
4.1.4	Kaons in pion matter	423
4.1.5	Chiral symmetry restoration	425
4.2	Strange baryons	426
4.2.1	QCD sum rules	426
4.2.2	Hadronic models	427
4.2.3	Exotica	428

5	Open charm probes	429
5.1	Perturbative calculation of charm-quark production near threshold	431
5.1.1	Resummation	432
5.1.2	Charm-quark production in pp collisions	434
5.2	Charm-quark interactions in the QGP	438
5.2.1	Energy loss of charm quarks at high momentum	438
5.2.2	Charm diffusion and nonperturbative correlations in the QGP	441
5.2.3	Charm dilepton decays	448
5.3	Charm chemistry and thermal models	449
5.4	QCD sum rules	451
5.4.1	Open charm mesons	451
5.4.2	Remarks on J/ψ	454
5.5	Charm hadrons in medium	455
5.5.1	Cold nuclear matter	455
5.5.2	Hot pion gas	458
5.5.3	Hot and dense nuclear matter	458
5.5.4	Charm baryons	462
6	Charmonium	465
6.1	Charmonium in equilibrium	466
6.1.1	Color screening and quarkonium	466
6.1.2	Free energy of static quarks in lattice QCD	466
6.1.3	Spectral functions and Euclidean correlators	469
6.1.4	Charmonium spectral functions and potential models	470
6.2	Charm(onium) production within the statistical hadronization model	471
6.2.1	Introduction	471
6.2.2	Assumptions and ingredients of the statistical hadronization model	473
6.2.3	Energy dependence of charmed hadrons yield	477
6.2.4	Effects of in-medium modification of charmed hadrons masses	478
6.2.5	Conclusions	480
6.3	Charmonium transport in hot and dense medium	481
6.3.1	Introduction	481
6.3.2	Normal and anomalous J/ψ suppression	483
6.3.3	Regeneration	489
6.3.4	Transverse-momentum distributions	492
6.3.5	Charmonia in heavy-ion collisions at low energies	495

7	Excitations of color-superconducting matter	499
7.1	Color superconductivity in the QCD phase diagram	499
7.2	Strong decays of mesonic resonances	500
7.3	Pre-critical phenomena of color superconductivity	503
8	Summary and relations to observables	509
	References	513

Part III Collision Dynamics

1	Introduction	533
1.1	General features	535
1.2	Collision geometry and dynamical scales	536
1.3	Degrees of freedom	539
1.4	Relation to the equation of state	541
2	Cascade models	543
2.1	Intra-nuclear cascade models	543
2.2	The linear cascade model (rows-on-rows)	544
2.3	Parton cascades	546
2.4	String models	547
3	Kinetic transport models	549
3.1	Potentials and mean fields	550
3.2	Two-body collisions (Boltzmann equation)	552
3.2.1	Boltzmann-Langevin dynamics	553
3.3	Transport theory with dynamical spectral functions	555
3.3.1	From the golden rule to the Kadanoff-Baym equations	557
3.3.2	Generalised transport equations with dynamical spectral functions	562
3.3.3	Generalised collision term C_{loc}	563
3.3.4	Gradient terms	564
3.3.5	The virial limit	566
3.3.6	Non-additivity of perturbative rates	569
3.3.7	Physical processes in dense matter	573
3.3.8	Detailed balance and two-particle irreducible (2PI) method	574
3.4	Beyond binary collisions	576
3.4.1	Phenomenological quasi-free ansatz for multi-particle processes	576
3.4.2	Intermediate resonances	577
3.4.3	Transport with dynamical spectral functions	577
3.4.4	Inclusion of many-body collisions in transport simulations	578
3.4.5	Higher-order processes within the quasi-particle picture	579

3.4.6	Recent progress and challenges	580
3.5	Specific implementations	583
3.5.1	Initialization	583
3.5.2	Solution methods.....	583
3.5.3	Boltzmann-equation model BEM (MSU)	585
3.5.4	GiBUU (Giessen).....	586
3.5.5	BRoBUU (Budapest/Rosendorf)	587
3.5.6	Relativistic BUU (Texas A&M/Stony Brook)	588
3.5.7	Relativistic BUU (Catania/Munich/Tübingen)	589
3.5.8	A Relativistic Transport ART (Texas A&M)	590
3.5.9	A Multi-Phase Transport AMPT (Texas A&M)	591
3.5.10	Hadron String Dynamics HSD	592
3.5.11	Quark-Gluon String Model QGSM.....	593
4	Many-body models	595
4.1	Molecular dynamics with phase-space smearing.....	596
4.1.1	IQMD: Isospin Quantum Molecular Dynamics	597
4.1.2	Relativistic Quantum Molecular Dynamics.....	598
4.1.3	UrQMD: Ultra-relativistic Quantum Molecular Dynamics	599
4.2	Quantum many-body approaches	600
4.2.1	Fermionic molecular dynamics	601
4.2.2	Antisymmetrized molecular dynamics	603
4.2.3	Quantal Langevin dynamics	604
5	Fluid dynamics	607
5.1	General framework	607
5.2	One-fluid hydrodynamics	608
5.3	Multi-fluid hydrodynamics	609
5.3.1	Three-fluid model	610
5.3.2	Phase conversion within non-equilibrium chemistry ...	611
5.4	Collective modes	614
5.5	Viscous fluid dynamics	615
5.6	Hybrid models	617
5.7	Fluid dynamics inspired models	619
5.8	Decoupling and freeze-out	620
5.9	Collision source imaging (HBT) and final-state correlations ..	628
6	Characteristic results	635
6.1	Gross characteristics of nucleus-nucleus collisions	635
6.2	Benchmarks	641
6.3	Mean-field dynamics	642
6.4	Collective flow	644
6.5	Rare probes	653

7	Status, perspectives and challenges	657
7.1	Summary of dynamical concepts	658
7.1.1	Micro-dynamical concepts	658
7.1.2	Macroscopic transport dynamics	660
7.2	Model overview	661
7.3	High-density challenge	663
7.4	Phase transitions	664
	References	667
 Part IV Observables and Predictions		
1	Introduction	683
2	Exploring the QCD phase diagram	687
3	Review of experimental observations	693
3.1	Probing dense nuclear matter: results from GSI	693
3.1.1	Kaons in dense nuclear matter	694
3.1.2	Probing the nuclear equation-of-state with subthreshold kaon production	700
3.1.3	Conclusions	703
3.2	Probing hot and dense hadronic matter: results from AGS	704
3.2.1	Identified particle spectra	705
3.2.2	Strange particle measurements	706
3.2.3	Antibaryon production	708
3.2.4	HBT studies	709
3.2.5	Elliptic and directed flow studies	711
3.2.6	Conclusions and perspectives for FAIR	712
3.3	Searching for the phase transition: results from SPS	714
3.3.1	Initial energy density	716
3.3.2	Hadronic expansion	717
3.3.3	Strangeness enhancement and chemical equilibrium	718
3.3.4	J/ψ suppression	720
3.3.5	In-medium modification of the ρ meson	721
3.3.6	Energy dependence of relative strangeness production	721
3.3.7	Conclusions and perspectives for FAIR	723
3.4	Probing partonic matter: results from RHIC	724
3.4.1	Jet quenching	724
3.4.2	Hydrodynamical elliptic flow	726
3.4.3	Constituent Quark (NCQ) Scaling of elliptic flow	727
3.4.4	Hadronic resonance measurements	728

4	Hadron production	731
4.1	Excitation functions of hadron yields	731
4.2	Excitation functions of hadron ratios	736
4.3	Conclusions and perspectives for FAIR	741
5	Transverse mass spectra	743
5.1	Beam energy dependence of transverse mass distributions	743
5.2	Particle mass dependence of transverse mass distributions	745
5.3	Conclusions and perspectives for FAIR	746
6	Collective flow	747
6.1	General considerations	747
6.2	Nucleon flow and the nuclear equation-of-state	748
6.3	Elliptic flow and partonic collectivity	750
6.4	Collective flow and phase transitions	752
6.5	Conclusions and predictions for FAIR energies	755
7	Dileptons	759
7.1	General overview	759
7.2	Lessons from the CERN-SPS	761
7.2.1	Invariant mass spectra	761
7.2.2	Transverse mass spectra	767
7.3	Dielectrons at RHIC	768
7.4	Dielectrons at BEVALAC and SIS	769
7.5	Conclusions and predictions for FAIR energies	772
8	Open and hidden charm	775
8.1	General overview	775
8.2	Charm in transport models	778
8.3	Charmonia from kinetic rate equations	781
8.4	The statistical hadronization model	785
8.5	Open charm in dense matter	787
8.6	Conclusions and predictions for FAIR energies	790
9	Fluctuations and correlations	795
9.1	Fluctuations and correlations in a thermal system	797
9.2	Fluctuations and correlations of conserved quantities	798
9.3	Electric charge fluctuations	800
9.4	Particle multiplicity ratio fluctuations	803
9.5	Correlation between baryon number and strangeness	805
9.6	Higher-order moments of the fluctuations	807
9.7	Fluctuations of the mean transverse momentum	809
9.8	Observable consequences of a first-order transition	811
9.8.1	Kinematic observables	812
9.8.2	Chemical observables	814
9.9	Observable consequences of a critical end point	816

9.10 Summary and concluding remarks	818
10 Dibaryons, hypernuclei and strange nuclear systems at FAIR	821
11 Summary	827
