Acknowledgments	i
Abstract.....	iii
Zusammenfassung	v
List of Tables..	ix
List of Figuresx	
Nomenclature	xvii
Abbreviations and acronyms	xvii
Symbology.....	xvii
1 Introduction	1
1.1 Active Vibration Control.....	2
1.2 State of the art	3
1.3 Motivation.....	11
1.4 Structure of the thesis.....	12
2 Theory	15
2.1 Active vibration control strategies	15
2.2 Electrodynamic inertial mass actuators (IMAs)	30
2.3 Optimal placement of actuators	33
2.4 Active control performance and electrical power flows.....	34
3 Preliminary studies of an AVC system on a single degree of freedom system.....	37
3.1 The experimental test rig and the simulation model.....	37
3.2 Control strategies.....	39
3.3 Simulations	39
3.4 Summary and conclusions of the chapter.....	44
4 The laboratory test rig and derivation of simulation models	45
4.1 The laboratory six-cell truss structure	45
4.2 Electrodynamic IMAs experimental validation and modelling	48
4.3 The experimental set-up and the simulation environment.....	54
5 Optimal actuator placement of six IMAs on the laboratory truss structure.....	55
5.1 Optimal positions and optimal actuator placements	55
5.2 Validation of the actuator positioning	57
5.3 Summary and conclusions of the chapter.....	67
6 Stability, performance and power consumption analysis of MIMO AVC system	69
6.1 Analysis and design of MIMO AVC with VFB.....	69
6.2 Analysis and design of MIMO AVC system with CVFB	77
6.3 Adaptive feedback with IMC	83
6.4 Summary and comparison of the results	90
6.5 Final considerations of the analysis	93
7 Design of performant and efficient MIMO AVC strategy.....	95
7.1 MIMO hybrid velocity feedback.....	95
7.2 Design of the MIMO Hybrid feedback control strategy	96
7.3 Performance and power consumption analysis.....	103
7.4 Summary and conclusions of the chapter.....	106
8 Conclusion and outlook.....	109
8.1 Summary and conclusion	109
8.2 Outlook.....	110
A. Further analysis and results on the single degree of freedom system	I

	Characterisation of the primary single degree of freedom.....	I
	Optimal control parameters evaluation.....	II
	Transmissibilities of the two DOF system with different control strategies for different frequency ratios	III
	Experimental performance and electrical power consumption analysis.....	IV
B.	Implementation of MIMO Hybrid feedback control on a Robotic Arm	VII
	AVC numerical simulations.....	VII
	Experimental investigations of the effects of AVC on the milling process	X
	Publications.....	XIII
	References.....	XV
