List of contributing authors — V

Preface — VI

Philip Lutze and Daniel Sudhoff

1	Introduction to process intensification — 1
1.1	Background on process intensification — 1
1.1.1	Definitions of PI — 1
1.1.2	Performance indicators for PI — 4
1.2	Scales and principles behind process intensification — 5
1.2.1	PI at different scales — 5
1.2.2	Principle behind process intensification — 13
1.2.3	Process intensification within this textbook — 14
1.3	Process synthesis/design — 17
1.3.1	State of the art: process synthesis/design methods — 18
1.3.2	Process synthesis/design methods to achieve PI from a PSE toolbox — 20
1.4	Take-home messages — 30
1.5	Quiz — 30
1.5.1	General PI — 30
1.5.2	Process and plant: Hybrid separations — 30
1.5.3	Operation and equipment: Dividing wall columns — 30
1.5.4	Phase and transport: Equilibrium reaction — 31
1.5.5	Fundamental and molecular: Equilibrium reaction — 31
1.6	Solutions — 31

Mirko Skiborowski and Andrzej Górak

2	Hybrid separation processes — 37
2.1	Introduction — 37
2.2	Synthesis of hybrid separation processes — 41
2.2.1	Heuristic rules — 41
2.2.2	Thermodynamic insight — 42
2.2.3	Model-based approaches and mathematical programming — 55
2.3	Conceptual design of hybrid separation processes — 59
2.3.1	Process synthesis framework — 59
2.3.2	Shortcut methods — 61
2.3.3	Methods based on conceptual design models — 64
2.3.4	Methods based on detailed rate-based models — 69

2.4	Illustration of exemplary applications of hybrid separation processes —	72
2.4.1	Case study 1: Distillation and melt crystallization —	72
2.4.2	Case study 2: Distillation and organic solvent nanofiltration —	80
2.4.3	Case study 3: Distillation with vapor permeation and/or adsorption —	87
2.5	Take-home messages —	97
2.6	Quiz —	98
2.6.1	Hybrid separation processes —	98
2.6.2	Synthesis of hybrid separation processes —	98
2.6.3	Conceptual design of hybrid separation processes —	98
2.7	Solutions —	100
2.7.1	Hybrid separation processes —	100
2.7.2	Synthesis of hybrid separation processes —	101
2.7.3	Conceptual design of hybrid separation processes —	103

Alexander Niesbach

3	Reactive distillation —	111
3.1	Fundamentals —	111
3.1.1	Benefits and drawbacks —	113
3.1.2	Configurations —	115
3.1.3	Column internals —	118
3.2	Applications —	121
3.2.1	Reactive distillation within the chemical industry —	122
3.2.2	Reactive distillation technology for white biotechnology —	123
3.3	Modeling —	134
3.3.1	Equilibrium-stage modeling approaches —	136
3.3.2	Nonequilibrium-stage modeling approaches —	138
3.4	Conceptual design of reactive distillation column —	139
3.4.1	Model-based design approaches for reactive distillation in columns —	141
3.4.2	Operation and hardware selection —	143
3.5	Detailed example —	147
3.5.1	Problem statement —	147
3.5.2	Feasibility —	147
3.5.3	Design —	150
3.6	Take-home messages —	154
3.7	Quiz —	155
3.8	Exercises —	157
3.8.1	Equilibrium reaction —	157
3.8.2	Operating parameter variation —	158

- 3.9 Solutions — 158
- 3.9.1 Equilibrium reaction — 158
- 3.9.2 Operating parameter variation — 160

Anna-Katharina Kunze

- 4 **Reactive absorption — 171**
 - 4.1 Fundamentals — 171
 - 4.1.1 Separation principle — 172
 - 4.2 Modeling — 175
 - 4.2.1 Mass transfer — 175
 - 4.2.2 Mass transfer and reaction — 179
 - 4.2.3 Hydrodynamics — 181
 - 4.3 Conceptual process design — 182
 - 4.3.1 Design considerations — 183
 - 4.3.2 McCabe–Thiele plot — 183
 - 4.3.3 Side effects — 187
 - 4.4 Applications — 189
 - 4.4.1 Solvent selection — 189
 - 4.4.2 Type of absorbers — 190
 - 4.4.3 Examples of applications — 192
 - 4.5 Detailed examples — 194
 - 4.5.1 Example 1: Separation of CO₂ from a flue gas stream — 194
 - 4.5.2 Example 2: Production of nitric acid — 197
 - 4.5.3 Example 3: Biogas upgrading — 197
 - 4.6 Take-home messages — 199
 - 4.7 Quiz — 200
 - 4.8 Exercises — 201
 - 4.8.1 Hydrodynamics and mass transfer efficiency — 201
 - 4.8.2 CO₂ absorption using an aqueous solution of NaOH — 202
 - 4.9 Solutions — 203
 - 4.9.1 Reactive absorption — 203
 - 4.9.2 CO₂ absorption using 1 M NaOH — 204

Robin Schulz

- 5 **Reactive extraction — 208**
 - 5.1 Fundamentals — 208
 - 5.1.1 Separation principle — 209
 - 5.1.2 Reactive extraction — 210
 - 5.1.3 Liquid-liquid equilibrium — 213
 - 5.1.4 Solvent systems — 215
 - 5.1.5 Operation modes — 215
 - 5.1.6 Type of apparatus — 216

5.2	Applications — 220
5.2.1	Approach A: Shifting the thermodynamic equilibrium — 221
5.2.2	Approach B: Retention of homogenous catalysts — 221
5.2.3	Approach C: Shift in the reaction equilibrium — 223
5.3	Modeling — 224
5.3.1	Shortcut models — 224
5.3.2	Detailed model considering mass transfer and kinetics — 224
5.4	Conceptual design — 226
5.4.1	Solvent selection — 227
5.4.2	Design — 227
5.4.3	Equipment selection — 229
5.5	Detailed example — 229
5.6	Take-home messages — 231
5.7	Quiz — 231
5.8	Exercises — 232
5.9	Solutions — 233

Johannes Holtbrügge

6	Membrane-assisted (reactive) distillation — 237
6.1	Fundamentals — 237
6.1.1	Pervaporation and vapor permeation — 238
6.1.2	Membrane-assisted distillation — 243
6.1.3	Membrane-assisted reactive distillation — 246
6.2	Applications — 249
6.2.1	Vapor permeation and pervaporation — 249
6.2.2	Membrane-assisted distillation — 250
6.2.3	Membrane-assisted reactive distillation — 252
6.3	Modeling — 254
6.3.1	Modeling of pervaporation and vapor permeation — 254
6.3.2	Modeling of membrane-assisted (reactive) distillation processes — 265
6.4	Conceptual design of membrane-assisted (reactive) distillation — 268
6.4.1	Feasibility of membrane-assisted (reactive) distillation — 269
6.4.2	Systematic framework for conceptual process design — 271
6.4.3	Superstructure optimization — 276
6.5	Detailed examples — 276
6.5.1	Separation of acetone, isopropanol, and water — 277
6.5.2	Synthesis and purification of dimethyl carbonate and propylene glycol — 280
6.6	Take-home messages — 285
6.7	Quiz — 286

6.8	Exercises —	287
6.8.1	Pervaporation —	287
6.8.2	Vapor permeation —	288
6.8.3	Membrane-assisted distillation —	289
6.8.4	Membrane-assisted reactive distillation —	292
6.9	Solutions —	295
6.9.1	Pervaporation —	295
6.9.2	Vapor permeation —	295
6.9.3	Membrane-assisted distillation —	296
6.9.4	Membrane-assisted reactive distillation —	300

Patrick Schmidt

7	OSN-assisted reaction and distillation processes —	312
7.1	Fundamentals —	312
7.1.1	Separation principle —	313
7.1.2	OSN membrane characterization methods —	315
7.1.3	Membrane materials and module types —	316
7.2	Applications —	318
7.3	Modeling —	322
7.3.1	Solution-diffusion models —	323
7.3.2	Pore-flow models —	324
7.3.3	Detailed models —	325
7.4	Design of OSN-assisted processes —	325
7.4.1	Conceptual design —	326
7.4.2	Detailed process design —	327
7.5	Examples —	331
7.5.1	Example 1: Integration of OSN and reaction —	333
7.5.2	Example 2: Integration of OSN and distillation —	343
7.6	Take-home messages —	353
7.7	Quiz —	354
7.7.1	OSN fundamentals —	354
7.7.2	Process design for OSN —	354
7.8	Exercises —	355
7.9	Solutions —	355
7.9.1	OSN fundamentals —	355
7.9.2	Process design for OSN —	358
7.9.3	Exercises —	359

Daniel Sudhoff

- 8 Centrifugally enhanced vapor/gas-liquid processing — 364**
 - 8.1 Fundamentals — 364**
 - 8.1.1 Historical Background — 364**
 - 8.1.2 Separation principles — 366**
 - 8.2 Applications — 371**
 - 8.2.1 Reactive systems — 371**
 - 8.2.2 Gas-liquid contacting systems — 372**
 - 8.2.3 Potential future applications — 378**
 - 8.3 Modeling and design — 380**
 - 8.3.1 Mass transfer evaluation — 381**
 - 8.3.2 Rotor design — 382**
 - 8.3.3 Design method for RPBs — 384**
 - 8.4 Detailed examples — 385**
 - 8.4.1 Example 1: Production of hypochlorous acid — 385**
 - 8.4.2 Example 2: Modular and flexible container systems — 386**
 - 8.4.3 Example 3: High-pressure distillation — 390**
 - 8.5 Take-home messages — 401**
 - 8.6 Quiz — 403**
 - 8.7 Exercises — 404**
 - 8.7.1 High-pressure distillation — 404**
 - 8.8 Solutions — 405**
 - 8.8.1 High-pressure distillation — 405**
