Kurzfassung	XXI
Abstract	XXIII

1 Introduction	1
1.1 Structure of this thesis	2
2 State-of-the-art in optimization of energy and production systems	5
2.1 Scheduling and synthesis of energy and production systems	6
2.1.1 Scheduling of systems	6
2.1.2 Scheduling and synthesis of energy systems	9
2.1.3 Scheduling and synthesis of production systems	13
2.2 Optimization methods for integrated systems	17
2.2.1 Integrated optimization	18
2.2.2 Coordination methods for optimization	20
2.2.3 Bilevel optimization	22
2.3 Contribution of this thesis	24

I Integrated optimization

3 Optimal synthesis of integrated energy and batch production systems	31
3.1 Integration of energy and production system synthesis	32
3.1.1 Problem characterization and conceptual overview of the method	32
3.1.2 Mathematical optimization model	33
3.2 Case studies	37
3.2.1 Case study I	39

3.2.2	Case study II	46
3.3	Conclusions	51
4	Integrated scheduling of energy and batch production systems for provision of control reserve	53
4.1	Integrated scheduling for provision of control reserve	54
4.1.1	Stochastic problem of control-reserve provision	54
4.1.2	Model extension for stochastic optimization	57
4.2	Case study	61
4.2.1	Description of the case study	62
4.2.2	Results	63
4.3	Conclusions	67

II Stackelberg-based optimization

5	Scheduling coordination of energy and production system	71
5.1	Minimizing total costs in a Stackelberg game	72
5.1.1	Repeated Stackelberg game	72
5.1.2	Demand-dependent energy costs	74
5.1.3	System modeling	77
5.2	Case studies	79
5.2.1	Case study I	80
5.2.2	Case study II	80
5.2.3	Results	82
5.3	Conclusions	85
6	Scheduling coordination of multiple energy and production systems	87
6.1	Coordination of multiple energy and production systems	88
6.1.1	Coordination between production systems and energy systems	89
6.1.2	Coordination among energy systems: Step ② + ④	91
6.1.3	Coordination among production systems: Step ③	94
6.2	Case studies	97
6.2.1	Case study I	98
6.2.2	Case study II	103
6.3	Conclusions	106
7	Bilevel optimization for joint scheduling of energy and production systems	109

7.1	Bilevel problem for scheduling energy and production systems	110
7.1.1	Formulation of the bilevel problem	110
7.1.2	Properties of the lower-level problem	112
7.2	Algorithm to solve the bilevel problem	114
7.2.1	Algorithm	114
7.2.2	Discretization points	115
7.2.3	Steps of the algorithm	117
7.2.4	Subproblems of the algorithm	118
7.3	Case studies	123
7.3.1	CHP subsidies	124
7.3.2	Grid alternative	130
7.4	Conclusions	134
8	Summary, conclusions and future perspectives	137
8.1	Summary and conclusions	137
8.2	Future perspectives on the optimization methods	139
8.3	Future perspectives on scope expansion	140

Appendices

A	Optimization models of energy and batch production systems	145
A.1	Model formulation for the synthesis and scheduling of energy and production systems	146
A.1.1	Production system	146
A.1.2	Energy system	147
A.2	Equations for changes of the energy demand	150
B	Parameters of the case studies	151
B.1	Parameters of the case study I in Section 3.2.1	152
B.2	Parameters of the case study II in Section 3.2.2	153
B.3	Parameters of the case study I in Section 5.2.1	156
B.4	Parameters of the case study II in Section 5.2.2	157
C	Additional results for the case studies in Section 5.2	159
C.1	Energy demand of case study II	160
C.2	Variation of initial energy prices	160
C.2.1	Case study I	161

C.2.2 Case study II	162
D Additional constraints of the discretization points in the lower-bounding problem	164
E Extended proof for multiple energy forms	168
F Publications and student theses	175
Bibliography	181
