Abstract	vii
Zusammenfassung	ix
List of Abbreviations	xv
List of Symbols	xix
1 Introduction	1
1.1 Motivation	1
1.2 Objectives and Organization of the Thesis	2
2 Fundamentals of Gallium Nitride Millimeter-Wave Power Amplifiers	7
2.1 Millimeter-Wave Frequencies	7
2.2 Gallium Nitride for High-Frequency Applications	11
2.3 Overview of State-of-the-Art Millimeter-Wave Power Amplifiers	13
2.4 Millimeter-Wave GaN HEMT Technology	15
2.5 Experimental Verification of the HEMT Model at the W-Band	17
2.6 Conclusions on Chapter 2	20
3 Passive Network Considerations for Broadband GaN Power Amplifiers	21
3.1 Broadband and Low-Loss Matching Networks	21
3.1.1 The Broadband Impedance Matching Problem	22
3.1.2 Importance of Using Low-Impedance Transmission Lines	26
3.1.3 Low-Loss Matching Networks	27
3.1.4 Low-Impedance and Low-Loss Microstrip Lines	28
3.1.5 Experimental Verification of Low-Impedance Matching Networks	32
3.1.6 Microstrip-to-Coplanar Mode Transition	35
3.2 Broadband DC-Biasing Networks Using Novel Radial Stubs	37
3.2.1 Modeling of the Conventional Radial Stub	38
3.2.2 Existing Solutions to Bandwidth Enhancement of the Radial Stub	39
3.2.3 A Novel Type of Radial Stub	40
3.2.4 Model Development for the Novel Separated Radial Stub	40
3.2.5 Experimental Verification of the Novel Radial Stub	44
3.2.6 Mathematical Formulation for the Novel Stub	47
3.2.7 Optimization of the Input Reflection of the Novel Radial Stub	49
3.3 Application of the Passive Network Concepts on Circuit Level	54
3.3.1 Design of Full W-Band GaN Power Amplifiers	54

3.3.2	Impact of the Radial Stub Configuration on the MMIC Performance	55
3.3.3	Measurement Results of the Power Amplifiers	56
3.3.4	Comparison with the State of the Art	59
3.4	Conclusions on Chapter 3	61
4	Topology-Based Performance Enhancements of GaN Power Amplifiers	63
4.1	D-Band GaN Power Amplifier Using a Cascode Topology	64
4.1.1	The Cascode Topology	64
4.1.2	Experimental Evaluation of a GaN HEMT Cascode Cell	65
4.1.3	Design of a Cascode-Based D-Band Power Amplifier	67
4.1.4	Measured Performance of the D-Band Power Amplifier	69
4.1.5	Comparison with the State of the Art	72
4.2	Millimeter-Wave Integrated f_T -Doubler Topology	74
4.2.1	The Darlington Topology	74
4.2.2	The f_T -Doubler Topology	75
4.2.3	Millimeter-Wave f_T -Doubler: A Novel Integrated Layout Approach	87
4.2.4	Experimental Evaluation of the Integrated AC-Coupled f_T -Doubler	89
4.2.5	Broadband Amplifiers Employing the Integrated f_T -Doubler	92
4.3	Conclusions on Chapter 4	95
5	Layout Considerations for G-Band GaN Amplifiers	97
5.1	Geometry-Based High-Frequency Gain Enhancement of GaN HEMTs	97
5.1.1	Transistor Layout Considerations for G-Band GaN Amplifiers	98
5.1.2	Experimental Comparison of Two GaN HEMT Layouts	104
5.1.3	Dimensioning GaN HEMTs for High-Frequency Applications	113
5.1.4	Application of the Transistor Layout Concepts in Broadband G-Band GaN Amplifiers	117
5.2	Advancing GaN Amplifiers Beyond 200 GHz	120
5.2.1	Scaling the Coplanar Waveguide Passive Networks	120
5.2.2	Modeling of Coplanar Waveguide Networks Based on Electromagnetic Simulations	125
5.2.3	Novel Compact Interstage Matching Network for Multi-Stage High-Frequency GaN Amplifiers	132
5.2.4	Examples of GaN Amplifiers Operating Beyond 200 GHz	134
5.3	Conclusions on Chapter 5	142
6	Conclusions	145
6.1	Summary and Conclusions of the Thesis	145
6.2	Impact of the Work on the State of the Art	148
A	General Two-Port Formulation of the f_T-Doubler Configuration	153
