|---|--------|
| <b>List of figures</b> . . . . .  | ix     |
| <b>Preface</b> . . . . .  | xiii   |
| <br><b>PART ONE DISCOVERING EUROPA</b> . . . . .  | <br>1  |
| <b>1 Water World</b> . . . . .  | 3      |
| 1.1 Life on a water world . . . . .   | 3      |
| 1.2 Is this for real? . . . . .   | 4      |
| 1.3 Tides . . . . .   | 6      |
| <br><b>2 Touring the surface</b> . . . . .  | <br>7  |
| 2.1 The global picture . . . . .  | 7      |
| 2.2 Zoom in to the regional scale . . . . .   | 14     |
| 2.3 Zooming closer: surface morphology . . . . .  | 18     |
| 2.4 Ridges . . . . .  | 20     |
| 2.5 Chaotic terrain . . . . .   | 23     |
| <br><b>3 Politics and intellect: Converting images into ideas and knowledge</b> . . . . . | <br>29 |
| 3.1 Politics on board . . . . .   | 31     |
| 3.2 Methods of the geologists . . . . .   | 32     |
| 3.3 The rule of canon law . . . . .   | 34     |
| 3.4 <i>Galileo</i> in the 20th century . . . . .  | 36     |
| 3.5 Technological obsolescence . . . . .  | 38     |

|  |     |
|--|-----|
| <b>PART TWO TIDES</b> . . . . .  | 45  |
| <b>4 Tides and resonance</b> . . . . .   | 47  |
| 4.1 Act locally, think globally . . . . .  | 47  |
| 4.2 Tidal distortion—the primary component . . . . .                                   | 49  |
| 4.3 <i>Galileo</i> data, the Laplace resonance, and orbital eccentricity. . . . .      | 51  |
| 4.4 The effect of orbital eccentricity—the variable component of the tides . . . . .   | 54  |
| 4.5 Effects of tides . . . . .   | 57  |
| <b>5 Tides and rotation</b> . . . . .  | 61  |
| 5.1 Synchronous rotation from the primary tidal component. . . . .                     | 61  |
| 5.2 Non-synchronous rotation from the diurnal tide . . . . .                           | 63  |
| 5.3 Rotational effects on Europa . . . . .   | 67  |
| <b>6 Tides and stress</b> . . . . .  | 71  |
| 6.1 Tidal stress due to non-synchronous rotation . . . . .                             | 74  |
| 6.2 Tidal stress due to diurnal variation . . . . .                                    | 80  |
| 6.3 Tidal stress: non-synchronous and diurnal stress combined . . . . .                | 83  |
| <b>7 Tidal heating</b> . . . . .   | 85  |
| <b>8 Tides and orbital evolution</b> . . . . .   | 91  |
| 8.1 Orbital theory. . . . .  | 91  |
| 8.2 Politics takes control . . . . .   | 97  |
| <b>PART THREE UNDERSTANDING EUROPA</b> . . . . .                                       | 101 |
| <b>9 Global cracking and non-synchronous rotation</b> . . . . .                        | 103 |
| 9.1 Lineaments formed by cracking . . . . .  | 103 |
| 9.2 The tectonic record of non-synchronous rotation . . . . .                          | 105 |
| 9.3 How fast does Europa rotate? . . . . .   | 112 |
| 9.4 Large-scale tectonic patterns—summary . . . . .                                    | 116 |
| <b>10 Building ridges</b> . . . . .  | 117 |
| 10.1 Other ridge formation models . . . . .  | 122 |
| 10.2 Downwarping, marginal cracking, multi-ridge complexes, and dark margins . . . . . | 127 |
| 10.3 Cracking through to the ocean. . . . .  | 131 |
| <b>11 Dilation of cracks</b> . . . . .   | 133 |
| <b>12 Strike-slip</b> . . . . .  | 145 |
| 12.1 Displacement at Astypalaea . . . . .  | 146 |

|           |   |            |
|-----------|---|------------|
| 12.2      | Tidal walking . . . . .   | 149        |
| 12.3      | Predicting strike-slip . . . . .  | 151        |
| 12.4      | Surveying strike-slip on Europa . . . . .                               | 157        |
| 12.5      | Particularly-striking examples . . . . .                                | 162        |
| 12.5.1    | The greatest displacement champion . . . . .                            | 162        |
| 12.5.2    | A time sequence of strike-slip . . . . .                                | 167        |
| 12.5.3    | A long, bent, equatorial cycloid in RegMap 01 . . . . .                 | 168        |
| 12.6      | Polar wander . . . . .  | 173        |
| 12.7      | Strike-slip summary . . . . .   | 178        |
| <b>13</b> | <b>Return to Astypalaea . . . . .</b>                                   | <b>181</b> |
| <b>14</b> | <b>Cycloids . . . . .</b>   | <b>191</b> |
| <b>15</b> | <b>Rotation revisited . . . . .</b>                                     | <b>207</b> |
| 15.1      | Cycloid constraints on the rotation rate . . . . .                      | 207        |
| 15.2      | Contradictions with previous work . . . . .                             | 210        |
| 15.3      | Back to Udaeus-Minos . . . . .  | 211        |
| <b>16</b> | <b>Chaos . . . . .</b>  | <b>219</b> |
| 16.1      | Characteristic appearance . . . . .                                     | 219        |
| 16.2      | Three hypotheses for formation of chaos . . . . .                       | 227        |
| 16.3      | Our survey . . . . .  | 231        |
| 16.4      | Melt-through . . . . .  | 238        |
| 16.5      | Volcanism, not . . . . .  | 243        |
| 16.6      | Heat for melt-through . . . . .   | 247        |
| <b>17</b> | <b>Crust convergence . . . . .</b>                                      | <b>251</b> |
| 17.1      | Balancing the surface area budget . . . . .                             | 251        |
| 17.2      | Surface corrugations . . . . .  | 252        |
| 17.3      | Chaotic terrain as a surface area sink . . . . .                        | 254        |
| 17.4      | Convergence bands . . . . .   | 255        |
| 17.5      | The Evil Twin of Agenor . . . . .                                       | 258        |
| <b>18</b> | <b>The scars of impact . . . . .</b>                                    | <b>265</b> |
| 18.1      | Gauges of age and crust thickness . . . . .                             | 265        |
| 18.2      | Numbers of impact features: Implications for surface age . . . . .      | 266        |
| 18.3      | Appearance of impact features: Implications for ice thickness . . . . . | 269        |
| <b>19</b> | <b>Pits and uplifts . . . . .</b>                                       | <b>285</b> |
| 19.1      | Undeniable (if you know what's good for you) facts . . . . .            | 285        |
| 19.2      | The myth of pits, spots, and domes . . . . .                            | 287        |
| 19.2.1    | PSDs and lenticulae . . . . .   | 291        |

|   |   |            |
|---|---|------------|
| 19.2.2  | Are any PSDs pits or 'domes? . . . . .                      | 293        |
| 19.2.3  | Farewell to PSDs . . . . .                                  | 295        |
| 19.3  | Survey of pits and uplifts . . . . .                        | 297        |
| 19.3.1  | Pit counts . . . . .  | 298        |
| 19.3.2  | Uplift counts . . . . .                                     | 302        |
| 19.4  | Formation of pits and uplifts. . . . .                      | 306        |
| 19.4.1  | Survey results vs. the PSD taxonomy . . . . .               | 306        |
| 19.4.2  | What are these things? . . . . .                            | 307        |
| <br><b>PART FOUR LIFE ON EARTH AND EUROPA . . . . .</b> |   | <b>311</b> |
| <b>20</b>   | <b>The bandwagon . . . . .</b>                              | <b>313</b> |
| 20.1  | Strike-slip in thick ice . . . . .                          | 314        |
| 20.2  | Overburden flexure . . . . .                                | 316        |
| 20.3  | Melt-through bashing . . . . .                              | 318        |
| 20.4  | Convection models. . . . .                                  | 320        |
| <b>21</b>   | <b>The biosphere . . . . .</b>                              | <b>323</b> |
| 21.1  | Dreams of life . . . . .                                    | 323        |
| 21.2  | Thin ice on a water world. . . . .                          | 324        |
| 21.3  | Substances above and below . . . . .                        | 326        |
| 21.4  | Life in the crust . . . . .                                 | 327        |
| 21.5  | Planetary protection. . . . .                               | 331        |
| 21.5.1  | The possibility of contamination . . . . .                  | 331        |
| 21.5.2  | Standards and risk . . . . .                                | 332        |
| 21.5.3  | Getting it right. . . . .                                   | 334        |
| <b>22</b>   | <b>The exploration to come . . . . .</b>                    | <b>337</b> |
| 22.1  | Plans for future space missions . . . . .                   | 337        |
| 22.2  | Look in the ice. . . . .                                    | 340        |
| 22.3  | Mothballed data . . . . .                                   | 342        |
| 22.4  | Weird features: The exceptions that hold the keys . . . . . | 343        |
| 22.4.1  | The many-legged spider of Manannán. . . . .                 | 343        |
| 22.4.2  | Disruption in the Sickles . . . . .                         | 343        |
| 22.4.3  | Short, curved double ridges within Astypalaea . . . . .     | 346        |
| 22.4.4  | Isolated tilted rafts . . . . .                             | 346        |
| 22.4.5  | Horsetail of Agenor . . . . .                               | 348        |
| 22.4.6  | Multiple-cusp cycloids . . . . .                            | 348        |
| 22.4.7  | Old-style bands. . . . .                                    | 348        |
| 22.5  | Self-correcting science. . . . .                            | 352        |
| <b>References . . . . .</b>                             |   | <b>355</b> |
