1	Introduction	1
1.1	Motivation	1
1.2	Research Goals	3
1.3	Outline of the Thesis	3
1.4	Notation and Acronyms	5
I	Background	7
2	Background	9
2.1	Real-Time Optimization (RTO)	9
2.1.1	Introduction	9
2.1.2	RTO: Formal Definition	10
2.2	Handling Uncertainties in RTO	12
2.2.1	Sources of Uncertainty	12
2.2.2	Parametric vs Structural Model-Plant Mismatch	13
2.2.3	Approaches for Handling Uncertainty in RTO	13
2.2.4	Robust Approaches for RTO	14
2.2.5	Adaptive Approaches for RTO	15
2.3	Modifier Adaptation	21
2.3.1	Formulation	21
2.3.2	Matching of Optimality Conditions	23
2.3.3	Convergence of MA and Model Adequacy	24
2.3.4	Gradient Estimation in Modifier Adaptation - A Brief Review	25
2.3.5	Open Issues	30
2.4	Summary	30

II Implementing Real-time Optimization based on Modifier Adaptation: A Proof of Concept	33
3 Implementing Real-time Optimization based on Modifier Adaptation: A Proof of Concept	35
3.1 Hydroformylation of 1-Dodecene in a TMS System	35
3.1.1 Process Description	35
3.1.2 Miniplant for the Hydroformylation of 1-Dodecene in a TMS System . . .	39
3.2 Model Description	42
3.3 Proposed Real-time Optimization System	50
3.3.1 Data Validation Module - Steady State Identification (SSI)	51
3.3.2 Data Validation Module - Robust Data Reconciliation	54
3.3.3 Optimization Module	58
3.4 Results and Discussions	60
3.4.1 Model Validation	60
3.4.2 Validation of the Steady State Identification (SSI) Module	62
3.4.3 Validation of the Data Reconciliation (DR) Module	64
3.4.4 Validation of the Optimization Module	66
3.4.5 RTO based on Modifier Adaptation: Proof of Concept	69
3.5 Summary	74
III Towards a Globally Convergent Real-Time Optimization Algorithm	75
4 Trust-Region based Modifier Adaptation (TR-MA)	77
4.1 Preliminaries	77
4.1.1 Derivative-Free Optimization and Trust-Region Methods	77
4.1.2 The Link between Derivative-Free Optimization, Trust-Region and Real-time Optimization	79
4.2 Outline of the Proposed Method	80
4.2.1 Problem Definition	80
4.2.2 General Overview of the Proposed Method	81
4.2.3 Proposed Algorithm: Unconstrained Case	82
4.2.4 Convergence Properties of the algorithm	84
4.2.5 Extension of TR-MA to Constrained Optimization	86
4.2.6 Model Adequacy for TR-MA	87
4.2.7 Differences and Similarities between TR-MA and Other Approaches . . .	87
4.3 Example: Penicillin Production	88
4.3.1 Process Description and Problem Formulation	88

4.3.2	Experimental Set-up (<i>in-silico</i>)	90
4.3.3	Results and Discussions	90
4.4	Summary	97
5	Implementing TR-MA	99
5.1	General Overview of the Proposed Framework	99
5.2	Proposed Framework: Step by Step	100
5.2.1	Initialization	101
5.2.2	Gradient Estimation Based on Linear Models	107
5.2.3	Gradient Estimation Based on Quadratic Models	110
5.2.4	The Complete Framework	113
5.3	Example: Hydroformylation of Long-chain Olefins	113
5.3.1	Problem Formulation	113
5.3.2	Experimental Set-up (<i>in silico</i>)	115
5.3.3	Results and Discussions	115
5.4	Summary	123
6	Achieving Convergence in the Presence of Noisy Measurements	127
6.1	Preliminaries	127
6.2	Problem Formulation and Basic Assumptions	128
6.3	Influence of Measurement Error in Gradient Estimation	130
6.4	Stochastic Approximation (SA)	131
6.4.1	The Principle	131
6.4.2	Convergence Properties of SA	133
6.5	Proposed Method: Stochastic Gradient Modifier Adaptation (SG-MA)	133
6.5.1	Proposed Algorithm: Step by Step	134
6.5.2	Convergence Properties of SG-MA	134
6.6	Example: Williams-Otto Reactor	136
6.6.1	Process Description and Problem Formulation	136
6.6.2	Experimental Set-up (<i>in silico</i>)	137
6.6.3	Results and Discussions	138
6.7	Summary	143
IV	Towards Fast Real-Time Optimization	145
7	Speeding-up RTO: A System Identification Approach	147
7.1	Preliminaries	147
7.1.1	Previous Works	147

7.2	Problem Formulation and Basic Assumptions	149
7.3	Proposed Scheme	150
7.3.1	General Overview	150
7.4	Model Structure Selection Module (offline)	150
7.4.1	The NARMAX model	150
7.4.2	Nonlinear Output Error Formulation	152
7.4.3	The Linear ARX Model	152
7.4.4	Approaches to Model Structure Selection	153
7.4.5	Proposed Method: A Bootstrap Algorithm	154
7.5	Online Parameter Estimation Module	156
7.6	Proposed Fast RTO: The complete Algorithm	157
7.7	Example: Modified Van de Vusse Reactor	160
7.7.1	Process Description and Problem Formulation	160
7.7.2	Assumed Set-Up	162
7.7.3	Results and Discussions	162
7.8	Summary	169
8	A Reliable Dynamic Real-Time Optimization Approach	171
8.1	Preliminaries	171
8.2	Problem Definition and Basic Assumptions	174
8.3	Proposed Scheme	176
8.3.1	Nominal Optimal Operating Point	176
8.3.2	Iterative Steady-State Optimization	177
8.3.3	Adaptive Dynamic Real-time Optimization (D-RTO)	178
8.3.4	Further Considerations	181
8.4	Example: Isothermal CSTR	182
8.4.1	Process Description and Problem Formulation	182
8.4.2	Experimental Set-up (in silico)	183
8.4.3	Results and Discussions	183
8.5	Summary	187
V	Conclusions and Outlook	189
9	Conclusions and Future Work	191
9.1	Conclusions	191
9.2	Future Work	192

VI	Appendix	197
A	Demonstrations (Selected Propositions)	199
A.1	Proof to Proposition 2.1: Matching Optimality Conditions in MA	199
A.1.1	Preliminaries	199
A.1.2	Sketch of the Proof 2.1	200
A.2	Proof to Proposition 4.1: Trust-Region Based Modifier Adaptation	202
A.2.1	Sketch of the Proof 4.1	202
A.3	Proof to Proposition 8.1: Matching Optimality Condition - Modified Dynamic Model	204
A.4	Proof to Proposition 8.1: Matching Optimality Conditions in D-RTO	205
B	Model Parameters	207
B.1	Penicillin Production Process	207
B.2	Hydroformylation Process	207
B.3	Williams Otto Reactor	212
B.4	Modified Van de Vusse Reactor	213
C	Experimental	215
C.1	Experimental	215
C.1.1	Chemicals	215
C.1.2	Analytics	215
C.1.3	Experimental Procedure	215
