# Generalized Bounds for Convex Multistage Stochastic Programs

 Springer

---

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Motivation	1
1.2	Previous Research	2
1.3	Objective	4
1.4	Outline	5
<b>2</b>	<b>Basic Theory of Stochastic Optimization</b>	<b>7</b>
2.1	Modelling Uncertainty	7
2.2	Policies	10
2.3	Constraints	11
2.4	Static and Dynamic Stochastic Programs	14
2.5	Here-and-Now Strategies	25
2.6	Wait-and-See Strategies	25
2.7	Mean-Value Strategies	26
<b>3</b>	<b>Convex Stochastic Programs</b>	<b>29</b>
3.1	Augmenting the Probability Space	29
3.2	Preliminary Definitions	33
3.2.1	Slater's Constraint Qualification	33
3.2.2	Convex Functions	35
3.2.3	Block-Diagonal Autoregressive Processes	36
3.3	Regularity Conditions	37
3.4	sup-Projections	40
3.5	Saddle Structure	41
3.6	Subdifferentiability	47
<b>4</b>	<b>Barycentric Approximation Scheme</b>	<b>51</b>
4.1	Scenario Generation	51
4.2	Approximation of Expectation Functionals	54
4.2.1	Jensen's Inequality	55
4.2.2	Edmundson-Madansky Inequality	57

4.2.3	Lower Barycentric Approximation .....	59
4.2.4	Upper Barycentric Approximation .....	62
4.3	Partitioning .....	63
4.4	Barycentric Scenario Trees .....	67
4.5	Bounds on the Optimal Value .....	74
4.6	Bounding Sets for the Optimal Decisions .....	77
<b>5</b>	<b>Extensions .....</b>	<b>83</b>
5.1	Stochasticity of the Profit Functions .....	84
5.2	Stochasticity of the Constraint Functions .....	89
5.3	Synthesis of Results .....	100
5.4	Linear Stochastic Programs .....	102
5.4.1	D.c. Functions .....	105
5.4.2	Generalized Bounds for Linear Stochastic Programs .....	106
5.5	Bounding Sets for the Optimal Decisions .....	111
<b>6</b>	<b>Applications in the Power Industry .....</b>	<b>113</b>
6.1	The Basic Decision Problem of a Hydropower Producer .....	115
6.2	Market Power .....	118
6.3	Lognormal Spot Prices .....	120
6.4	Lognormal Natural Inflows .....	121
6.5	Risk Aversion .....	123
6.6	Numerical Results .....	126
6.6.1	Model Parameterization .....	126
6.6.2	Discretization of the Probability Space .....	128
6.6.3	Results of the Reference Problem .....	129
6.6.4	Hydro Scheduling Problem with Market Power .....	130
6.6.5	Lognormal Prices .....	131
6.6.6	Hydro Scheduling Problem with Lognormal Inflows .....	133
6.6.7	Hydro Scheduling Problem with Risk-Aversion .....	137
<b>7</b>	<b>Conclusions .....</b>	<b>141</b>
7.1	Summary of Main Results .....	141
7.2	Future Research .....	145
<b>A</b>	<b>Conjugate Duality .....</b>	<b>147</b>
<b>B</b>	<b>Lagrangian Duality .....</b>	<b>155</b>
<b>C</b>	<b>Penalty-Based Optimization .....</b>	<b>163</b>
<b>D</b>	<b>Parametric Families of Linear Functions .....</b>	<b>165</b>
<b>E</b>	<b>Lipschitz Continuity of sup-Projections .....</b>	<b>169</b>
	<b>References .....</b>	<b>175</b>

<b>List of Figures</b> .....	183
<b>List of Tables</b> .....	185
<b>Index</b> .....	187
