
Contents

1	General notes on synthesis	1
1.1	Soluble polyvinylpyrrolidone (Povidone)	1
1.2	Insoluble polyvinylpyrrolidone (Crospovidone)	3
1.3	Vinylpyrrolidone-vinyl acetate copolymer (Copovidone)	4
2	Soluble polyvinylpyrrolidone (Povidone)	5
2.1	Structure, product range, synonyms	5
2.2	Product properties	6
2.2.1	Description, specifications, pharmacopoeias	6
2.2.2	Solubility, dissolution	9
2.2.3	Viscosity, K-value	10
2.2.4	Particle size, particle structure, bulk density	18
2.2.5	Hygroscopicity	21
2.2.6	Molecular weight	23
2.2.7	Complexation, chemical reactions	28
2.2.8	Osmotic pressure, sterilization by filtration (low-molecular povidone)	31
2.2.9	Stability, storage	33
2.3	Analytical methods for povidone	37
2.3.1	Qualitative and quantitative methods of determination	37
2.3.2	Methods for the determination of the K-value and molecular weight	40
2.3.3	Methods for the determination of purity	43
2.3.4	Determination of povidone in preparations	61
2.4	Applications of povidone	66
2.4.1	General properties	66

2.4.2	Binders for tablets, granules and hard gelatin capsules	67
2.4.3	Improvement of the dissolution rate and bioavailability of drugs ...	83
2.4.4	Tablet coatings	98
2.4.5	Improvement of the solubility of drugs (solubilization)	102
2.4.6	Suspensions, dry syrups and instant granules	109
2.4.7	Applications in ophthalmic solutions	111
2.4.8	Sustained-release preparations	113
2.4.9	Miscellaneous applications	120
3	Insoluble polyvinylpyrrolidone (Crospovidone)	125
3.1	Structure, product range, synonyms	125
3.2	Properties of crospovidone	126
3.2.1	Description, specifications, pharmacopoeias	126
3.2.2	Particle size, bulk density	128
3.2.3	Specific surface area, water absorption	131
3.2.4	Swelling	133
3.2.5	Complexation, chemical interaction	134
3.2.6	Stability, storage, packaging	138
3.3	Analytical methods for crospovidone	139
3.3.1	Qualitative and quantitative methods of determination	139
3.3.2	Methods for the determination of purity	141
3.3.3	Determination of complexation capacity with salicylic acid	148
3.3.4	Quantitative determination of crospovidone in preparations	149
3.4	Applications of crospovidone	149
3.4.1	General application properties	149
3.4.2	Crospovidone as disintegrant and dissolution agent for tablets, granules and hard gelatin capsules	150
3.4.3	Improvement of the dissolution and bioavailability of drugs with crospovidone	162
3.4.4	Micronized crospovidone of low bulk density as a stabilizer for oral and topical suspensions	168
3.4.5	Micronized crospovidone as an active substance	174
3.4.6	Miscellaneous applications	176
4	Vinylpyrrolidone-vinyl acetate copolymer (Copovidone)	179
4.1	Structure, synonyms	179
4.2	Product properties	180

4.2.1	Description, specification, pharmacopoeias	180
4.2.2	Solubility	181
4.2.3	Viscosity, K-value, molecular weight	182
4.2.4	Physical properties of the powder	186
4.2.5	Stability, storage, packaging	189
4.3	Analytical methods	190
4.3.1	Qualitative and quantitative methods of determination	190
4.3.2	Methods for the determination of purity	195
4.3.3	Determination of copovidone in preparations	204
4.4	Applications of copovidone	205
4.4.1	General notes	205
4.4.2	Binder for tablets, granulates and hard gelatin capsules	206
4.4.3	Tablet coatings	214
4.4.4	Film-forming agent in sprays	216
4.4.5	Matrix-forming agent in sustained-release and fast-release dosage forms	217
4.4.6	Transdermal and transmucosal systems	218
5	Registration and toxicological data	221
5.1	Registration	221
5.1.1	Pharmaceutical products	221
5.1.2	Food	222
5.2	Toxicological data	224
5.2.1	Povidone and Crospovidone	224
5.2.2	Copovidone	225
6	Literature references	227
7	Alphabetical index	249
