
Contents

Multiscale Discontinuous Galerkin Methods for Elliptic Problems with Multiple Scales	
<i>Jørg Aarnes, Bjørn-Ove Heimsund</i>	1
Discrete Network Approximation for Highly-Packed Composites with Irregular Geometry in Three Dimensions	
<i>Leonid Berlyand, Yuliya Gorb, Alexei Novikov</i>	21
Adaptive Monte Carlo Algorithms for Stopped Diffusion	
<i>Anna Dzougoutov, Kyoung-Sook Moon, Erik von Schwerin, Anders Szepessy, Raúl Tempone</i>	59
The Heterogeneous Multi-Scale Method for Homogenization Problems	
<i>Weinan E, Björn Engquist</i>	89
A Coarsening Multigrid Method for Flow in Heterogeneous Porous Media	
<i>Jens Eberhard, Gabriel Wittum</i>	111
On the Modeling of Small Geometric Features in Computational Electromagnetics	
<i>Fredrik Edelvik</i>	133
Coupling PDEs and SDEs: The Illustrative Example of the Multiscale Simulation of Viscoelastic Flows	
<i>Benjamin Jourdain, Claude Le Bris, Tony Lelièvre</i>	149
Adaptive Submodeling for Linear Elasticity Problems with Multiscale Geometric Features	
<i>Mats G. Larson, Fredrik Bengzon, August Johansson</i>	169

Adaptive Variational Multiscale Methods Based on A Posteriori Error Estimation: Duality Techniques for Elliptic Problems	
<i>Mats G. Larson, Axel Målqvist</i>	181
Multipole Solution of Electromagnetic Scattering Problems with Many, Parameter Dependent Incident Waves	
<i>Martin Nilsson, Per Lötstedt</i>	195
Introduction to Normal Multiresolution Approximation	
<i>Olof Runborg</i>	205
Combining the Gap-Tooth Scheme with Projective Integration: Patch Dynamics	
<i>Giovanni Samaey, Dirk Roose, Ioannis G. Kevrekidis</i>	225
Multiple Time Scale Numerical Methods for the Inverted Pendulum Problem	
<i>Richard Sharp, Yen-Hsi Tsai, Björn Engquist</i>	241
Multiscale Homogenization of the Navier–Stokes Equation	
<i>Nils Svanstedt, Niklas Wellander</i>	263
Numerical Simulations of the Dynamics of Fiber Suspensions	
<i>Anna-Karin Tornberg</i>	275
