

Contents

Abbreviations and Symbols	III
1 Submillimeter-Wave Monolithic Integrated Transceivers With On-Chip Antennas	1
1.1 State-of-the-Art and Motivation	2
1.2 Metamorphic High-Electron-Mobility Transistor Technology	6
1.3 Back End of Line for Active Chain and On-Chip Antenna	7
1.4 Scope, Aim, and Challenges of the Thesis	9
1.5 Outline	10
2 Broadband, High-Power, and High-Gain Submillimeter-Wave Transmitters and Receivers	13
2.1 Depiction of the Characterization Set-Up	14
2.2 Analysis on S-MMIC Design, Simulation, and Measurement	16
2.2.1 Analysis on Transmitter Design Methodology	17
2.2.2 Analysis on Power Amplifier Design Methodology	19
2.2.3 Evaluation of Power Amplifier Simulations Versus Measurements	26
2.2.4 Analysis on Multiplier-by-Four Design Methodology	31
2.2.5 Evaluation of Transmitter and Multiplier-by-Four Simulations Versus Measurements	32
2.2.6 Analysis on Receiver Design Methodology	34
2.2.7 Analysis on Low-Noise Amplifier Design Methodology	34
2.2.8 Evaluation of Low-Noise Amplifier Simulations Versus Measurements	36
2.2.9 Analysis on Sub-Harmonic Mixer Design Methodology	37
2.2.10 Evaluation of Receiver and Sub-Harmonic Mixer Simulations Versus Measurements	39
2.3 Analysis and Evaluation of Design Improvements in Terms of Realized Bandwidth	41
2.3.1 Transmitter Design Improvements	41
2.3.2 Receiver Design Improvements	46
2.4 State-of-the-Art, Discussion and Conclusions	47
3 Metastructure- and Dielectric-Resonator-Based Submillimeter-Wave On-Chip Antenna	53
3.1 Analysis on Metastructure Design and Modeling Methodology	56
3.1.1 Transmission-Line Model	57
3.1.2 Three-Dimensional Electromagnetic Model	60

3.1.3	Effects of Metastructure-Design Improvements and Corresponding Conclusions	63
3.2	Analysis on Dielectric-Resonator and Director-Plate Design and Modeling Methodology	65
3.2.1	Theoretical Model	66
3.2.2	Three-Dimensional Electromagnetic Model	67
3.2.3	Discussion and Conclusion	69
3.3	Characterization of the On-Chip Antenna Reflection Coefficient	69
3.3.1	Evaluation of Simulations Versus Measurements	70
3.4	Characterization of the On-Chip Antenna Far-Field Patterns	74
3.4.1	Transmitter With On-Chip Antenna	74
3.4.2	Characterization Setup	75
3.4.3	Evaluation of Simulations Versus Measurements	76
3.4.4	Dielectric Lens	88
3.4.5	The Influence of RF-Probing on the Far-Field Patterns	92
3.4.6	Comparison of the Far-Field Characteristics of Two Metastructure Designs	94
3.5	State-of-the-Art, Discussion and Conclusions	95
4	Broadband Submillimeter-Wave Frequency-Modulated Radar Sensor With On-Chip Antennas	99
4.1	Discussion on Frequency-Modulated Radar Fundamentals and System Architecture	100
4.1.1	Analysis and Evaluation of the Transceiver Chip	104
4.2	Evaluation of Radar Images/Scans	107
4.2.1	Surface Images: Benefits and Limitations of a High Upper-Cutoff Frequency	107
4.2.2	Range Scans: Benefits and Limitations of a Wide-Operating Bandwidth	111
4.3	Discussion and Conclusions	113
5	Conclusions	117
5.1	On the Transmitter and Receiver S-MMICs	117
5.2	On the On-Chip Antenna	120
5.3	On the Transceiver S-MMIC	122
5.4	Outlook	122
A	Evaluation of the Cross-Polar Far-Field Patterns of the On-Chip Antenna	125
B	ZRX500 Receiver Utilized in the Far-Field Characterization of the On-Chip Antenna	129
	Bibliography	133
	Publications of the Author	147
