

Table of Contents

Preface	V
Chapter 1 – Introduction	1
PLM – What is it?.....	1
Product Lifecycle Management – background	2
Corporate challenges	5
Chapter 2 – Fundamentals.....	7
Product data or product information.....	7
Product Lifecycle Management – PLM.....	9
Product lifecycle management concept	11
Items	12
Product lifecycle management systems	13
System architecture.....	19
Information models and product structures	22
Information model	22
The product information (data) model.....	23
The product model.....	24
Reasons for the deployment of PLM systems	26
Summary.....	27
Chapter 3 – Product lifecycle management systems.....	29
Functionality of the systems	29
Use of product lifecycle management systems in different organization verticals.....	40
Product development and engineering.....	42
Production.....	43
After sales	43
Sales and marketing.....	44
Sub-contracting.....	45
Sourcing and procurement.....	47
Summary.....	48

Chapter 4 – Product structures	49
Example 1 – Product structure of a ship	51
Example 2: Product structure of a cellular telephone	53
Example 3: Product structure of a customizable product	54
Summary.....	56
 Chapter 5 – Integration of the PLM system with other applications	 57
Different ways to integrate PLM systems	57
Transfer file	59
Database integration	62
System roles.....	63
ERP	64
CAD.....	65
Configurators.....	67
EAI	69
Summary	72
 Chapter 6 – Deployment of the PLM system.....	 73
Different stages of deployment.....	73
Leading a PLM project.....	74
Understanding the need for change	74
Study of present and objective processes (AS IS and TO BE).....	75
PLM maturity model	76
Choosing a system.....	79
Realization stage of the project	82
Start up	85
Steering group	86
Project group	88
Project manager.....	90
Problems.....	92
Accomplishing change in the organization.....	93
Summary	98
 Chapter 7 – Business benefits of a PLM system.....	 99
Factors leading to product lifecycle management	99
Benefits of the PLM system in product lifecycle management	101
Measuring the business benefits in daily operations	106
Material costs – reducing inventory tied capital.....	106
Improving the productivity of labor	108
Costs of quality.....	110
PLM and data warehousing as a tool to support decision-making	112

Analyzing the cost of acquisition and the deployment of a PLM system	118
PLM software licenses.....	120
Database licenses	121
Hardware acquisitions	121
Maintenance of equipment, licenses and software	121
Summary.....	121
 Chapter 8 – Challenges of product management in manufacturing industry	123
Challenges of product management in the engineering and manufacturing industry	124
Life cycle thinking, value added services and after sales	124
Traceability	130
Special challenges of product management in the high tech industry	134
Case 1: Electronics manufacturer	136
Efficiency as a goal	136
The management of the company set the following primary objectives for the PLM project	137
Starting the project	140
Execution of the project.....	141
In the next stage partners came along.....	142
Case 2: An engineering product	143
Situation at the beginning of the project.....	144
Management of items	145
Approval of documents	146
Management of the product structure	146
Information system environment in use	146
Integration of information processing systems.....	147
Standard design solutions	147
Frame of reference for product management.....	148
Problem sections of the product management	149
Developing product lifecycle management in Project workshop Plc.	150
Management of documents.....	150
Management of the product structure	153
Change management and workflows.....	153
The advantages and development potential brought by the product lifecycle management system.....	154
Pilot.....	156
Experiences of the pilot	157
What next?.....	159

Case 3: Capital goods manufacturer and customer-specifically variable product	159
Breakthroughs on subprojects	161
Controlled entry of documentation into the system	161
The business processes determine	162
Rome was not built in a day either	163
Guidelines for the future	163
Summary	163

Chapter 9 – The role of product information management in collaborative business development 165

CIM – Computer Integrated Manufacturing	165
CE Concurrent Engineering	169
Product lifecycle management as an enabler of cooperation between companies	172
Contents of collaboration	175
Successful cooperation	176
Tools of collaboration	176
International standardization organizations	177
CPC	178
cPDm	179
Summary	179

Chapter 10 – Understanding the product lifecycle 181

The basic behavior of products and lifecycles	182
Using metrics to steer your business performance in various phases of the product lifecycle	183
Other aspects of product lifecycle	186
Product lifecycle – data (information) management view	187
Building a product business case	189
Summary	197

Chapter 11 – Product and product management strategy as a part of business strategy 199

Product lifecycle management as a business strategy tool	199
From changes in the business environment to product strategy	200
Making a product strategy	202
Product management strategy	205
Time to market – the time required to bring a new product to market	207
Time to react – the time required to carry out the changes demanded by the market and customers	209

Time to volume – the time required for ramping up the mass production of the product	210
Time to service – the response time to a service order from the customer	212
Summary	214
Chapter 12 – e-Business – electronic business and PLM	215
Preconditions for electric business from the viewpoint of the individual company	218
Significance of product management, collaboration and electronic business for the manufacturing industry	221
Summary	222
Chapter 13 – Digest.....	223
Epilogue	227
Appendix 1 – Tools and standards of PLM	229
A. CALS	229
B. STEP	230
C. DXF	233
D. IGES	233
E. SGML.....	234
F. XML	234
G. UML	235
Appendix 2 – Companies and products in the PLM field	237
Appendix 3: PLM terminology.....	239
Literature and articles.....	245
