Measurement Uncertainties in Science and Technology

With 47 Figures

 Springer

Contents

Part I Characterization, Combination and Propagation of Errors

1	Basic Ideas of Measurement	3
1.1	Sources of Measurement Uncertainty	3
1.2	Quotation of Numerical Values and Rounding	8
1.2.1	Rounding of Estimators	8
1.2.2	Rounding of Uncertainties	8
2	Formalization of Measuring Processes	11
2.1	Basic Error Equation	11
2.2	Random Variables, Probability Densities and Parent Distributions	18
2.3	Elements of Evaluation	21
3	Densities of Normal Parent Distributions	25
3.1	One-Dimensional Normal Density	25
3.2	Multidimensional Normal Density	29
3.3	Chi-Square Density and F Density	33
3.4	Student's (Gosset's) Density	36
3.5	Fisher's Density	41
3.6	Hotelling's Density	43
4	Estimators and Their Expectations	51
4.1	Statistical Ensembles	51
4.2	Variances and Covariances	54
4.3	Elementary Model of Analysis of Variance	58
5	Combination of Measurement Errors	61
5.1	Expectation of the Arithmetic Mean	61
5.2	Uncertainty of the Arithmetic Mean	63
5.3	Uncertainty of a Function of One Variable	66
5.4	Systematic Errors of the Measurands	70

6	Propagation of Measurement Errors	71
6.1	Taylor Series Expansion	71
6.2	Expectation of the Arithmetic Mean	74
6.3	Uncertainty of the Arithmetic Mean	77
6.4	Uncertainties of Elementary Functions	80
6.5	Error Propagation over Several Stages	87

Part II Least Squares Adjustment

7	Least Squares Formalism	93
7.1	Geometry of Adjustment	93
7.2	Unconstrained Adjustment	97
7.3	Constrained Adjustment	100
8	Consequences of Systematic Errors	101
8.1	Structure of the Solution Vector	101
8.2	Minimized Sum of Squared Residuals	103
8.3	Gauss–Markoff Theorem	105
8.4	Choice of Weights	107
8.5	Consistency of the Input Data	109
9	Uncertainties of Least Squares Estimators	113
9.1	Empirical Variance–Covariance Matrix	113
9.2	Propagation of Systematic Errors	117
9.3	Overall Uncertainties of the Estimators	119
9.4	Uncertainty of a Function of Estimators	128
9.5	Uncertainty Spaces	130
9.5.1	Confidence Ellipsoids	131
9.5.2	The New Solids	132
9.5.3	EP Boundaries and EPC Hulls	141

Part III Special Linear and Linearized Systems

10	Systems with Two Parameters	151
10.1	Straight Lines	151
10.1.1	Error-free Abscissas, Erroneous Ordinates	154
10.1.2	Erroneous Abscissas, Erroneous Ordinates	165
10.2	Linearization	172
10.3	Transformation	173

11 Systems with Three Parameters	175
11.1 Planes	175
11.2 Parabolas	181
11.2.1 Error-free Abscissas, Erroneous Ordinates	181
11.2.2 Erroneous Abscissas, Erroneous Ordinates	188
11.3 Piecewise Smooth Approximation	192
11.4 Circles	195
12 Special Metrology Systems	203
12.1 Dissemination of Units	203
12.1.1 Realization of Working Standards	203
12.1.2 Key Comparison	205
12.2 Mass Decades	210
12.3 Pairwise Comparisons	215
12.4 Fundamental Constants of Physics	215
12.5 Trigonometric Polynomials	224
12.5.1 Unknown Model Function	225
12.5.2 Known Model Function	227

Part IV Appendices

A On the Rank of Some Matrices	233
B Variance-Covariance Matrices	235
C Linear Functions of Normal Variables	239
D Orthogonal Projections	241
E Least Squares Adjustments	245
F Expansion of Solution Vectors	249
G Student's Density	257
H Quantiles of Hotelling's Density	261
References	263
Index	267
