Part 1

Fluorescence Spectroscopy: Basics and Advanced Approaches . . . 1

1	Basics of Fluorescence Spectroscopy in Biosciences	3
	M. HOF, V. FIDLER and R. HUTTERER	
1.1	Introduction	3
1.2	Fluorescence and its Measurement	4
1.2.1	Molecular Electronic Relaxation	4
1.2.2	Detecting Fluorescence	5
1.2.3	Data Evaluation	6
1.3	Polarized Fluorescence	7
1.3.1	Definition of Polarization and Anisotropy	7
1.3.2	Steady-State Fluorescence Anisotropy	8
1.3.3	Time-Resolved Fluorescence Polarization	9
1.3.3.1	Non-Spherical Particles in Homogenous Isotropic Medium	9
1.3.3.2	Segmental Mobility of the Chromophore	10
1.3.3.3	Hindered Rotors: Fluorescent Dyes in Biological Membranes	10
1.4	Influence of Fluorescence Quenching	11
1.4.1	Fluorescence Quantum Yield and Lifetime	11
1.4.2	Fluorescence Quenchers	11
1.4.2.1	Solute Quenching	12
1.4.2.2	Solute Quenching in Protein Studies: an Application Example	13
1.4.2.3	Solvent Quenching	15
1.4.2.4	Self-Quenching	16
1.4.2.5	Trivial Quenching	16
1.5	Influence of Solvent Relaxation on Solute Fluorescence	17
1.5.1	Basics of Solvent Relaxation	17
1.5.2	Influence of Solvent Relaxation on Steady-State Spectra	18
1.5.2.1	Non-Viscous Solvents	18
1.5.2.2	Viscous and Vitrified Solutions	18
1.5.3	Quantitative Characterization of Solvent Relaxation by Time-Resolved Spectroscopy	19
1.6	Fluorescence Resonance Energy Transfer as a Spectroscopic Ruler	20
1.6.1	Donor-Acceptor Pairs at Fixed Distances	20
1.6.2	Donor-Acceptor Pairs at Variable Distances	21
1.6.3	Some Applications of Fluorescence Resonance Energy Transfer	21
1.7	Irreversible Photobleaching	22

1.8	Single Molecule Fluorescence	23
1.9	Optical Sensors Based on Fluorescence	24
	References	25
2	Pulse and Phase Fluorometries: An Objective Comparison	30
	B. VALEUR	
2.1	Introduction	30
2.2	General Principles of Time-Resolved Fluorometry	31
2.2.1	Pulse Fluorometry	32
2.2.2	Phase-Modulation Fluorometry	32
2.2.3	Relation Between Harmonic Response and δ -Pulse Response	33
2.2.4	General Relations for Single Exponential and Multiexponential Decays	34
2.3	Pulse Fluorometers	35
2.4	Phase-Modulation Fluorometers	37
2.4.1	Phase Fluorometers Using a Continuous Light Source and an Optical Modulator	38
2.4.2	Phase Fluorometers Using the Harmonic Content of a Pulsed Laser	40
2.5	Data Analysis	41
2.6	Specific Applications	42
2.6.1	Time-Resolved Spectra	42
2.6.2	Time-Resolved Emission Anisotropy	44
2.6.3	Lifetime-Based Decomposition of Spectra	45
2.6.4	Fluorescence Lifetime Imaging Microscopy (FLIM)	45
2.7	Concluding Remarks	47
	References	48
3	Non-Exponential Fluorescence of Electronically Coupled Donors Contains Distance Information	49
	S. KALININ, M. ISAKSSON and L. B.-Å. JOHANSSON	
3.1	Introduction	49
3.2	Theory	50
3.3	Methods	51
3.4	Results and Discussion	51
3.4.1	Synthetic Data	51
3.4.2	Experimental Data	53
3.5	Conclusions	54
	References	54

4	Fluorescence Nanotomography: Recent Progress, Constraints and Opportunities	56
	O. J. ROLINSKI and D. J. S. BIRCH	
4.1	Introduction	56
4.2	Fluorescence Resonance Energy Transfer	57
4.3	FRET Sensors	58
4.4	Fluorescence Nanotomography Theory	60
4.4.1	An Inverse Problem	61
4.4.2	Separation of Variables Approach	62
4.4.3	Numerical Simulations	64
4.5	Experimental	66
4.5.1	Bulk Solutions	66
4.5.2	Porous Polymer Nafion 117	66
4.5.3	Phospholipid Bilayers	68
4.6	Conclusions	69
	References	69
5	Solvent Relaxation as a Tool for Probing Micro-Polarity and -Fluidity	71
	J. ŠÝKORA, R. HUTTERER and M. HOF	
5.1	Introduction	71
5.2	Basic Principles of the SR Method	71
5.3	Applications of the SR Technique by Using Time-Correlated Single Photon Counting	73
5.3.1	SR in Phospholipid Bilayers	73
5.3.2	SR in Reverse Micelles	75
5.3.3	SR in Polymers	76
5.3.4	SR in Ionic Liquid	76
5.3.5	SR in DNA	76
5.3.6	SR in Proteins	77
	References	77
6	Total Internal Reflection Fluorescence Microscopy: Applications in Biophysics	79
	N. L. THOMPSON and J. K. PERO	
6.1	Introduction	79
6.1.1	Overview	79
6.1.2	Optical Principles	79
6.1.3	Apparatus	81
6.1.4	Sample Types	83
6.2	Combination of TIRFM with Other Methods	83
6.2.1	Fluorescence Recovery after Photobleaching	83

6.2.2	Evanescent Interference Patterns	85
6.2.3	Fluorescence Correlation Spectroscopy	86
6.2.4	Fluorescence Resonance Energy Transfer	88
6.2.5	Variable Incidence Angles	89
6.2.6	Inverse Imaging	90
6.3	Advanced Topics	91
6.3.1	High Refractive Index Substrates	91
6.3.2	Thin Metal Films and Metallic Nanostructures	92
6.3.3	Fluorescence Emission Near Planar Dielectric Interfaces	92
6.3.4	Fluorescence Polarization	93
6.3.5	Fluorescence Lifetimes and Time-Resolved Anisotropies	94
6.3.6	Two-Photon Excitation	94
6.4	Other Applications	95
6.4.1	Single Molecule Imaging	95
6.4.2	Imaging Cell-Substrate Contact Regions	96
6.4.3	Exocytosis and Secretion Vesicle Dynamics	97
6.4.4	Emerging Methods	98
6.5	Summary	98
	References	99

7 Single Molecule Spectroscopy: Basics and Applications 104

J. ENDERLEIN

7.1	Introduction	104
7.2	Photophysics, Probes and Markers	105
7.3	Physical Techniques	109
7.3.1	Modified Flow Cytometry, Microchannels and Microdroplets	109
7.3.2	Confocal Detection	111
7.3.3	Wide-Field Imaging	113
7.4	Data Acquisition and Evaluation	116
7.4.1	Time-Tagged and Time-Correlated Photon Counting	116
7.4.2	Fluorescence Correlation Spectroscopy	117
7.4.3	Fluorescence Intensity Distribution Analysis and Related Techniques	120
7.4.4	Molecule-by-Molecule Analysis	120
	References	122

Part 2

Application of Fluorescence Spectroscopy to Biological Membranes 131

8	Raft Microdomains in Model Membranes as Revealed by Fluorescence Quenching	133
	G. DUPORELL	
8.1	Introduction	133
8.2	Identification of Lipid Compositions Forming Rafts	134

8.3	Temperature Dependence in Domain/Raft Formation	139
8.4	Affinity of Lipids and Proteins for Rafts as Detected by Quenching	143
8.5	Alternative Fluorescence Methods for the Detection of Rafts . . .	147
	References	149
9	The Lateral Structure of Lipid Membranes as Seen by Fluorescence Microscopy	150
	L. A. BAGATOLLI	
9.1	Introduction	150
9.2	Giant Vesicles	151
9.3	Domains in Membranes	151
9.4	Fluorescent Probes: Advantages and Disadvantages	153
9.5	Correlation with Other Experimental Techniques	155
9.6	Concluding Remarks and Future Directions	157
	References	158

Part 3

Application of Fluorescence Spectroscopy to Protein Studies 161

10	Protein Dynamics and Protein Folding Dynamics Revealed by Time-Resolved Fluorescence	163
	A. SAXENA, J. B. UDGAONKAR and G. KRISHNAMOORTHY	
10.1	Introduction	163
10.2	Dynamic Fluorescence of Tryptophan	164
10.2.1	Tryptophan Motional Dynamics and Protein Surface Hydration .	166
10.2.2	Motional Dynamics of Trp53 in Stable Structural Forms of Barstar	167
10.2.3	Tryptophan Dynamics and "Double Kinetics" in Protein Folding .	168
10.2.4	Motional Dynamics of Trp53 During Folding of Barstar	170
10.2.5	Evolution of Core Dynamics During Unfolding of Barstar	171
10.3	Time-Resolved Fluorescence Resonance Energy Transfer (tr-FRET) in Protein Folding	173
10.3.1	tr-FRET Shows Incremental Unfolding of Barstar	174
10.3.2	Evolution of Population Heterogeneity During Folding of Barstar: Demonstration of "Folding Funnel"	175
10.4	Conclusions and Outlook	177
	References	177

11	Time-Resolved Fluorescence and Two-Photon FCS Investigation of the Interaction of HIV-1 Nucleocapsid Protein with Hairpin Loop Oligonucleotides	180
	J. AZOULAY, S. BERNACCHI, H. BELTZ, J.-P. CLAMME, E. PIEMONT, E. SCHAUB, D. FICHEUX, B. ROQUES, J.-L. DARLIX and Y. MÉLY	
11.1	Introduction	180
11.2	Materials and Methods	183
11.2.1	Materials	183
11.2.2	Steady-State and Time-Resolved Fluorescence Measurements	183
11.2.3	FCS Setup	184
11.3	Results and Discussion	185
11.3.1	Time-Resolved Fluorescence Measurements	185
11.3.2	Fluorescence Correlation Spectroscopy	190
11.4	Conclusion	193
	References	195

Part 4

Application of Fluorescence Spectroscopy to DNA and Drug Delivery 199

12	Fluorescence Techniques in Non-Viral Gene Therapy	201
	N. ADJIMATERA, A. P. NEAL and I. S. BLAGBROUGH	
12.1	Introduction to Non-Viral Gene Therapy and its Development	201
12.2	Using Fluorescence Techniques to Determine the Efficiency of DNA Condensing Agents: an Important First Step in the Mechanism of NVGT	204
12.3	Conjugation of Lipopolyamines to Fluorophores: Probes Derived from DNA Delivery Agents	206
12.4	Preparation of Fluorescent Macromolecules	209
12.5	Lipopolyamines and Cationic Lipids Used in Transfection	211
12.6	Association and Dissociation Studies of DNA Complexes Through Fluorescence Correlation Spectroscopy (FCS)	215
12.7	DNA Complexes and Their Intracellular Trafficking: Monitoring by Fluorescence (Förster) Resonance Energy Transfer (FRET)	216
12.8	Fluorescence Microscopy in NVGT	217
12.8.1	New Emerging Fluorescence Techniques to Explore in NVGT Research	221
12.9	Conclusions	223
	References	224

13	Fluorescence Applications in Targeted Drug Delivery	229
	K. BRYL and M. LANGNER	
13.1	Introduction	229
13.2	Fluorescence Techniques as Tools for the Development of Targeted Drug Delivery Systems	231
13.2.1	The Supramolecular Aggregate Formation Process	231
13.2.2	Selected Aggregate Parameters – Relevance and Measurement Techniques	233
13.2.2.1	Aggregate Size	233
13.2.2.2	Capacity to Carry the Active Compound	234
13.2.2.3	Aggregate Stability	234
13.2.2.4	Aggregate Surface Properties	235
13.2.2.4.1	Aggregate Surface Electrostatic Potential	235
13.2.2.4.2	Aggregate components mobility	235
13.2.2.5	Aggregate Topology	236
13.2.2.6	Homogeneity of Aggregate Preparation	237
13.2.3	Aggregate Intracellular Fate	237
13.3	Perspectives	239
	References	240

Part 5

Fluorescence Spectroscopy in Cells: FCS and Quantum Dots

14	Fluorescence Correlation Spectroscopy in Cell Biology	245
	B. BROCK	
14.1	Introduction	245
14.2	Fluorescence Correlation Spectroscopy Step by Step	247
14.2.1	Theoretical Background	247
14.2.2	Calculation of the Autocorrelation Function	248
14.2.3	Implementation of an Analytical Formalism for Describing an Autocorrelation Function: Translational Diffusion	250
14.2.4	Autocorrelation Functions Containing Several Components	251
14.2.4.1	All Fluctuations Having the Same Amplitude per Molecule	252
14.2.4.2	Fluctuations Having Different Amplitudes	254
14.2.5	Noise	254
14.3	Cellular FCS	255
14.3.1	Molecular Dynamics	255
14.3.2	Intracellular Concentration Measurements	256
14.3.3	Limiting Factors in Cellular FCS	258
14.4	Perspectives	260
14.4.1	Combinations of Detection Modalities	260
14.4.2	Alternative Methods for Analysing Diffusional Modes	261
	References	261

15	Fluorescence Quantum Dots: Properties and Applications	263
	M. R. WARNEMENT and S. J. ROSENTHAL	
15.1	Introduction	263
15.2	Photophysical properties of Quantum Dots	264
15.3	Applications of Quantum Dots as Fluorescent Probes	269
15.4	Summary	273
	References	273
16	Heat Stress of Cancer Cells: Fluorescence Imaging of Structural Changes with Quantum Dots™ 605 and Alexa™ 488	275
