

Contents

1	Elements of Probability Theory	1
1.1	Introduction	1
1.2	Probability Measures and Their Generalisation	6
1.3	Conditional Probability Structures and Bayes' Theorem	16
1.4	Random Variables and Probability Distributions	22
1.5	Parametric Families of Probability Distributions	30
1.5.1	Characterising Properties	33
1.5.2	Normal Approximations	38
1.5.3	Exponential Families	39
1.6	Exponential Transformations	42
1.7	Central Limit Theorem	47
1.8	Asymptotic Error Propagation	48
1.9	Modes of Convergence	51
1.10	Conditional Expectation	55
2	Elements of Statistical Theory	61
2.1	Introduction	61
2.2	Statistical Inference	62
2.2.1	Point Estimation	62
2.2.2	Hypothesis Testing	75
2.2.3	Confidence Intervals	81
2.3	The $k(1, 2, \dots)$ -Sample Problem	83
2.4	The General Linear Model	89
2.4.1	Scope	89
2.4.2	Estimation of Regression Coefficients	91
2.4.3	Geometrical Interpretation	93
2.4.4	Linear Parameter Restrictions	97
2.5	Introduction to Multivariate Analysis	99
2.5.1	Bivariate Normal Density	100
2.5.2	Multivariate Normal Density	102
2.5.3	Principal Components and their Application	104

3	Applied Linear Regression	113
3.1	Introduction	113
3.2	Estimation and Hypothesis Testing	115
3.2.1	Linear Regression Models	115
3.2.2	Maximum Likelihood and Least-Squares Estimators	117
3.2.3	Method of Least Squares	118
3.2.4	Geometrical Interpretation	119
3.2.5	Distribution Theory of Linear Regression Estimators	121
3.2.6	Confidence Regions and Testing of Hypotheses	122
3.3	Model Selection and Validation	128
3.3.1	Motivation	128
3.3.2	Selection of Variables	130
3.3.3	Model Validation	134
3.4	Analysis under Non-Standard Assumptions	134
3.4.1	Behaviour of Mean Values	134
3.4.2	Behaviour of Variances	138
3.4.3	Applicable Techniques	142
3.4.4	Inverse Regression	148
3.5	Generalisations of Linear Regression	150
3.5.1	Motivation	150
3.5.2	Generalised Linear Models	150
3.5.3	Nonlinear Regression	153
3.5.4	Other Extensions	157
4	Profile Analysis	161
4.1	Introduction: Fusion Context	161
4.2	Discrete Profile Representations	168
4.3	Continuous Profile Representations	170
4.3.1	Mean Value Structures	172
4.3.2	Polynomials	173
4.3.3	Perturbation Expansion	173
4.3.4	Splines	174
4.3.5	Error Structures	177
4.4	Profile Dependence on Plasma Parameters	179
4.4.1	Mean Value and Error Structures	179
4.4.2	Profile Invariance	181
4.5	Estimation of Regression Coefficients	182
4.5.1	Least Squares and Maximum Likelihood	182
4.5.2	Robust Estimation	187
4.6	Model Testing	189
4.6.1	Discrete Versus Continuous Profile Representations	190
4.6.2	Different Covariance Structures	191
4.6.3	Different Continuous Profile Representations	192
4.6.4	Profile Invariance	193
4.7	Confidence Bands and Regression	194

4.7.1	Local Confidence Bands	195
4.7.2	Global Confidence Bands	195
4.7.3	Prediction Bands	196
4.7.4	Confidence Intervals for Global Plasma Variables	198
4.8	Summary and Conclusions	200
4.9	Appendix	202
4.9.1	Profile Representation by Perturbation Expansion: Moments	202
4.9.2	Variance and Bias for Volume-Averaged Global Quantities	202
5	Discriminant Analysis	205
5.1	Introduction	205
5.2	Theory	208
5.2.1	Informal Introduction to Discriminant Analysis	208
5.2.2	Statistical Aspects of Discriminant Analysis	210
5.3	Practice	216
5.3.1	Dataset Description and Visual Analysis	216
5.3.2	Discriminant Analysis using Four Instantaneous Plasma Parameters	222
5.3.3	Plasma Memory and Plasma–Wall Distance	237
5.4	Summary and Discussion	244
6	Statistical Software	249
6.1	Overview	249
6.2	SAS	254
6.3	S–Plus	256
7	Annotated Plasma Physical Datasets	259
7.1	Introduction	259
7.2	Case I: Scalings of the Energy Confinement Time	260
7.3	Case II: Halo Currents at ASDEX Upgrade (AUG)	272
7.4	Case III: Density Limit (AUG)	274
7.5	Case IV: High-frequency MHD Oscillations (AUG)	278
7.6	Case V: Heat Flux Profiles (AUG)	282
7.7	Case VI: Density Profiles of Neutral Particles (AUG)	285
7.8	Case VII: Plasma Parameter Recovery (AUG)	289
	Some Annotated Statistical Literature	294
