Solar System Update

 **Springer**

Published in association with
Praxis Publishing
Chichester, UK

PRAXIS 

Contents

1 The Solar Atmosphere and Space Weather

<i>Volker Bothmer</i>	1
1.1 Early Concepts of Solar-Terrestrial Physics	2
1.2 Discovery of the Solar Wind, its Source Regions and Geomagnetic Effects ..	5
1.3 Structure of the Heliosphere	11
1.4 The Changing Solar Magnetic Field and Dynamic Corona	13
1.5 The Explosive Corona – Coronal Mass Ejections	19
1.6 Space Storms and Space Weather Effects	27
1.7 The Future – Forecasting Space Weather	35
References	45

2 Mercury

<i>Robert G. Strom and Ann L. Sprague</i>	55
2.1 Introduction and General Characteristics	55
2.2 Motion and Temperature	56
2.3 Mercury's Surface-bounded Exosphere	60
2.4 Polar Deposits	63
2.5 Interior and Magnetic Field	64
2.6 Geology and Planet Evolution	68
2.6.1 Geologic surface units	68
2.6.2 Surface composition	73
2.6.3 Tectonic framework	74
2.6.4 Thermal history	76
2.6.5 Geologic history	77
2.7 Origin	78
2.8 The MESSENGER Mission	81
References	82

3 The Atmosphere of Venus: Current Knowledge and Future Investigations

<i>Dmitri V. Titov, Hakan Svedhem and Fred W. Taylor</i>	87
3.1 Introduction	87
3.2 Current Knowledge and Outstanding Puzzles	88
3.2.1 Temperature structure	88
3.2.2 Composition and chemistry	90
3.2.3 Cloud layer	92
3.2.4 Radiative effects in the Venus atmosphere	93

3.2.5	Atmospheric dynamics	95
3.2.6	Plasma environment and solar wind-atmosphere interaction	96
3.2.7	Surface and its interactions with atmosphere	98
3.2.8	Evolution of the atmosphere and climate	98
3.3	Venus Express and Future Missions to Venus	100
3.3.1	Venus Express — the first European mission to Venus	101
3.3.2	Planet-C — the Japanese meteorological mission to Venus	103
3.3.3	Results expected from Venus Express and Planet-C	104
3.3.4	Future Venus exploration	105
3.4	Venus' Place in Comparative Planetology and Climatology	106
	References	107

4 Moon's Origin And Evolution: Alternatives and Implications

	<i>Harrison H. Schmitt</i>	111
4.1	Introduction: The Consensus	111
4.1.1	Origin	112
4.1.2	Evolution	113
4.2	Moon Origin by Giant Impact Unlikely	115
4.3	Terrestrial Planets Had Early Chondritic Cores	119
4.4	Melt from Huge Impacts Produced First Continents	120
4.5	Lunar Cataclysm at 3.9 Gyr Faked by Late Basin-Forming Impacts	122
4.6	Clay Minerals Dominated Earth's Crust Before Life Appeared	126
4.7	Conclusion	127
	References	127

5 Evidence for Climate Change on Mars

	<i>Stephen R. Lewis and Peter L. Read</i>	135
5.1	Introduction	135
5.2	Martian Climate in the Present Epoch	136
5.3	Evidence for Climate Change on Mars	138
5.3.1	The ancient martian landscape	138
5.3.2	The Mars Exploration Rovers	142
5.3.3	Water ice in equatorial regions	144
5.3.4	Polar layered deposits	146
5.3.5	Martian Climate Change in the Present	148
5.4	Martian Climate Change Modelling	151
5.4.1	Climate change and early Mars	151
5.4.2	Climate change with orbital parameters	152
5.5	Future Prospects	155
5.5.1	The MARSIS experiment	155
5.5.2	The SHARAD experiment	155
5.6	Conclusion	156
	References	156

6 The Habitability of Mars: Past and Present

<i>Thomas M. McCollom</i>	159
6.1 Introduction	159
6.2 Mars and the Bare Necessities of Life	161
6.2.1 Water on Mars	161
6.2.2 Energy for martian life	167
6.3 Habitats for Life: The Present	170
6.4 Habitats for Life: The Past	171
6.5 Is There Anybody Out There?	172
References	173

7 Jupiter-sized Planets in the Solar System and Elsewhere

<i>Patrick G. J. Irwin</i>	177
7.1 Introduction	177
7.1.1 Gross characteristics of the giant planets	178
7.2 Extrasolar Planets	178
7.2.1 Radial velocity detections	179
7.2.2 Transit detections	183
7.2.3 Atmospheres and predicted spectra of EGPs	185
7.2.4 Implications for Solar System formation models	186
7.3 Further Methods of Detecting Extrasolar Planets	188
7.3.1 Radial velocity programmes	189
7.3.2 Transit programmes	189
7.3.3 Astrometry	190
7.3.4 Direct optical detection	190
7.3.5 Microlensing	192
7.3.6 Conclusions	192
References	194

8 The Icy Moons of Jupiter

<i>Richard Greenberg</i>	197
8.1 Introduction	197
8.2 Internal Structure and Composition	200
8.2.1 Europa	200
8.2.2 Ganymede	202
8.2.3 Callisto	204
8.2.4 Amalthea	204
8.3 Formation and Evolution of Icy Satellites	206
8.3.1 Formation of the jovian system	206
8.3.2 Tidal effects of the Laplace resonance	207
8.4 Surface Appearance and Geology	209
8.4.1 Europa	209
8.4.2 Ganymede	210
8.4.3 Callisto	213
8.5 Conclusions and Implications	213
References	215

9 Cassini at Saturn: The First Results

<i>Ellis D. Miner, Dennis L. Matson and Linda J. Spilker</i>	217
9.1 Introduction	217
9.2 Science En Route to Saturn	220
9.3 Phoebe Science Results	222
9.4 Early Magnetospheric Findings	222
9.5 Early Atmospheric Observations	226
9.6 Early Findings on Saturn's Rings	228
9.7 Observations of Titan	232
9.7.1 Huygens probe observations of Titan	232
9.7.2 Cassini orbiter observations of Titan	235
9.8 Early Findings on Iapetus	238
9.9 Early Findings on Enceladus	240
9.10 Other Preliminary Icy Satellite Findings	242
9.11 Conclusions	245
References	245

10 The Ice Giant Systems of Uranus and Neptune

<i>Heidi B. Hammel</i>	251
10.1 Introduction	251
10.2 The Uranus System	251
10.2.1 The atmosphere of Uranus at Equinox	252
10.2.2 Perhaps a new ring and dusty old rings	255
10.2.3 How many moons does Uranus have?	256
10.2.4 The ionosphere of Uranus	257
10.3 The Neptune System	258
10.3.1 Neptune's evolving atmosphere	258
10.3.2 Clumpy Rings	261
10.3.3 Triton: an icy body with a warming atmosphere	262
10.3.4 More moons around Neptune	262
10.4 Future Exploration of the Ice Giants	263
References	264

11 The Solar System Beyond The Planets

<i>Audrey Delsanti, David Jewitt</i>	267
11.1 Introduction	267
11.1.1 Resonant objects	267
11.1.2 Classical Kuiper belt	268
11.1.3 Scattered objects	268
11.1.4 Detached objects	269
11.2 Pluto and Other Large Kuiper Belt Objects	269
11.2.1 Pluto	269
11.2.2 2003 UB ₃₁₃	271
11.2.3 2005 FY ₉	272
11.2.4 2003 EL ₆₁	273
11.3 Binaries and Multiple Systems	273

11.4 Observed Structure of the Kuiper Belt	275
11.4.1 Inclination distribution and velocity dispersion	275
11.4.2 Radial extent	277
11.4.3 Mass and size distribution	277
11.4.4 Origin of the structure	278
11.4.5 Problem of the missing mass	279
11.5 Surface Properties of KBOs	280
11.5.1 Colors	280
11.5.2 Spectra	285
11.6 Related Objects	287
11.6.1 Centaurs	287
11.6.2 Comets	288
11.6.3 Irregular satellites	288
References	290
 12 The Nature of Comets	
<i>David W. Hughes</i>	295
12.1 Introduction	295
12.2 Cometary Characteristics	297
12.3 A Model Of A Cometary Nucleus	301
12.4 Cometary Activity	307
12.5 Cometary Missions And Early Results	310
12.6 Conclusions	315
References	315
 Index	 317
