1	Introduction	1
1.1	Data in Geosciences: for Example, Surface Solar Radiation Records	1
1.2	R	8
1.3	Independent Identically Distributed (Iid.) Random Variables	10
1.3.1	Univariate Analysis of the Pyranometer Data	10
1.3.2	Unbiased and Consistent Estimators, Central Limit Theorem	13
1.3.3	Bivariate Analysis of the Pyranometer Data	17
1.3.4	Are the Pyranometer Daily Values Iid.?	22
1.4	Time Series	23
1.4.1	Time Series Plots	23
1.4.2	A Model for the Error of the Pyranometer Measurements	30
1.5	Supplements	31
1.5.1	Formulas for Calculating the Moments of Random Variables	31
1.5.2	Chebyshev Inequality	32
1.5.3	Independent and Normally Distributed Random Variables	32
1.5.4	Bivariate (two-dimensional) Normal Density	34
1.5.5	Multivariate Normal Distribution	35
1.6	Problems	36
2	Stationary Stochastic Processes	39
2.1	Empirical Moments of a Wind Speed Time Series	39
2.2	Stationary Stochastic Processes	44
2.2.1	Stochastic Processes	44
2.2.2	1st and 2nd Moment Functions	50
2.2.3	Stationarity Assumptions	52
2.3	Discrete-time Stochastic Processes	56
2.3.1	White Noise Process	56
2.3.2	First Order Autoregressive (AR[1]) Process	60
2.3.3	Random Walk	64
2.3.4	First Order Moving Average Process	66

2.3.5	Linear Process	70
2.4	Convolution I	74
2.4.1	Linear and Time-invariant Transformations	74
2.4.2	Existence and Calculation of Convolution Sums	78
2.4.3	Inverse Sequences	82
2.4.4	Examples: AR[1] and AR[2] Models	84
2.5	When Is a Time Series Stationary?	88
2.5.1	Diagnostics for the Stationarity of a Time Series	88
2.5.2	Locally Stationary Time Series	92
2.6	Estimators for the Moment Functions of a Stationary Stochastic Process	97
2.6.1	Properties of the Empirical Moment Functions of a Stationary Time Series	97
2.6.2	Ergodic Theorems: a Cautionary Remark	101
2.7	Optimal Linear Predictions	102
2.8	Supplements	104
2.8.1	First and/or second Moment Functions of some Processes	104
2.8.2	Moments of the Mean of a Stationary Time Series ...	106
2.8.3	Properties of the Optimal Linear Prediction	108
2.8.4	The Conditional Expectation as Optimal Prediction ..	111
2.9	Problems	113
3	Linear Models for the Expectation Function	121
3.1	Simple Linear Regression	122
3.1.1	An Introductory Example	122
3.1.2	Simple Linear Regression	125
3.2	Multiple Regression	130
3.2.1	A Linear Model for the Expectation Function	130
3.2.2	Least Squares	132
3.2.3	Independent Observations with Constant Variance ...	133
3.2.4	Generalised least squares	133
3.2.5	Normally distributed residuals	136
3.3	Diagnostics for Linear Models	136
3.3.1	Plots	136
3.3.2	Model Selection	142
3.4	Seasonal and Component Models	145
3.4.1	Seasonal Models	145
3.4.2	Component Models	148
3.5	Trends and Station Effects of Shortwave Incoming Radiation .	151
3.6	Trend Surfaces for the Tree-line in the Valais Alps	161
3.7	Problems	167

4	Interpolation	171
4.1	Deterministic Interpolation	173
4.1.1	Distance Weighted Interpolation	173
4.1.2	Tessellation of the Area under Study	178
4.1.3	Discussion	180
4.2	The Spatial Random Function and its Variogram	181
4.3	Estimating the Variogram	185
4.3.1	Empirical Variograms I: the Isotropic Case	186
4.3.2	Variogram Models	193
4.3.3	Empirical Variograms II: the Anisotropic Case	196
4.3.4	Empirical Variograms III: the Case with Non-constant Drift	200
4.4	Optimal Linear Predictors for Spatial Random Functions	206
4.5	Optimal Interpolation of Spatial Random Functions	209
4.5.1	The Stationary Case: Simple Kriging	209
4.5.2	The Intrinsic Case: Ordinary Kriging	215
4.5.3	The Case with a Non-constant Drift: Universal Kriging	216
4.5.4	Summary	222
4.6	Supplements	225
4.6.1	Isotropic Empirical Variograms	225
4.6.2	Support	227
4.6.3	Measurement Errors	229
4.6.4	Local Interpolation	236
4.6.5	Spatial Averages	239
4.6.6	Optimal Interpolation: Summary	243
4.7	Problems	244
5	Linear Processes	249
5.1	AR[p] Models	250
5.1.1	The Yule-Walker-Equations of an AR[p] Model	251
5.1.2	Levinson-Durbin Recursion, Partial Correlation Function	255
5.1.3	Examples	257
5.2	Estimating an AR[p] Model	262
5.2.1	Burg's Algorithm	262
5.2.2	Regression Estimates	264
5.2.3	Maximum Likelihood Estimates	266
5.2.4	Summary of Sects. 5.1 and 5.2	269
5.3	MA[q], ARMA[p, q] and ARIMA[p, d, q] Models	271
5.3.1	MA[q] Model	271
5.3.2	ARMA[p, q] Model	275
5.3.3	ARIMA[p, d, q] Model	279
5.3.4	Estimators for an ARMA[p, q] Model	280
5.4	Fitting an ARIMA[p, d, q] Model	282

5.4.1	Removing Trends or other Fluctuations from a Time Series	282
5.4.2	Identification	289
5.4.3	Estimation	295
5.4.4	Diagnostics	297
5.4.5	Selection and Summary	304
5.5	Predictions	306
5.5.1	Predictions Using a Theoretical ARMA[p, q] Model ...	306
5.5.2	Predictions Using an Estimated ARMA[p, q] Model ...	311
5.5.3	Summary	313
5.6	Supplements	314
5.6.1	Levinson-Durbin Recursion	314
5.6.2	Partial Correlation Function	316
5.6.3	Predictions Derived from the AR[∞] and MA[∞] representations of an ARMA[p, q] Model	318
5.6.4	Predictions Derived from the Difference Equation of an ARMA[p, q] Model	320
5.7	Problems	322
6	Fourier Transforms of Deterministic Functions	329
6.1	Adding Trigonometric Functions	330
6.1.1	Representation of a Sequence using Trigonometric Functions	330
6.1.2	Fourier transforms: a Preview to Chap. 6	337
6.1.3	Spectra of Time Series: a Preview to Chaps. 7, 9 and 10	338
6.2	Linear Vector Spaces	340
6.2.1	Linear Vector Spaces	340
6.2.2	Orthogonal Functions	343
6.2.3	Orthogonal Trigonometric Functions	345
6.3	Fourier Transforms	347
6.3.1	Case 1: Discrete Fourier Transform	347
6.3.2	Case 2: Fourier Series	353
6.3.3	Case 3: Fourier Integrals	357
6.3.4	Case 4: Fourier Series with t and s Reversed	363
6.3.5	Delta Function	367
6.4	Spectra	372
6.5	Aliasing and Leakage	374
6.5.1	Measuring a Function $f(t)$ with Real Argument t	375
6.5.2	Aliasing	380
6.5.3	Leakage	383
6.6	Width of Functions in a Fourier Transform Pair	389
6.6.1	Dynamic Range and Width at Half Height	390
6.6.2	Equivalent Width and σ -Width	392
6.6.3	Autocorrelation Width and Uncertainty Relationship	394
6.6.4	Time-limited and Band-limited Sequences	397

6.7	Using a Data Taper to Reduce Leakage.....	399
6.7.1	Data Taper	400
6.7.2	Aliasing and Leakage Circumvented.....	404
6.8	Convolution II	408
6.8.1	Linear and Time-invariant (LTI) Systems.....	409
6.8.2	First Order Differences and Moving Average	412
6.8.3	Low-pass, High-pass and Band-pass Filters	416
6.9	Supplements	418
6.9.1	Orthogonal Trigonometric Functions	418
6.9.2	Discrete Fourier Transform	420
6.9.3	Sums of Trigonometric Functions	420
6.9.4	Properties of Fourier Transform Pairs	421
6.9.5	Bessel's Inequality and Parseval's Identity	424
6.9.6	Properties of the Autocorrelation	425
6.9.7	Demonstration of the Convolution Theorem	428
6.9.8	Autocorrelation and Discrete Fourier Transform in R ..	429
6.10	Problems	433
7	Fourier Representation of a Stationary Stochastic Process	441
7.1	Independent and Poisson-distributed Events	442
7.1.1	Poisson Process	442
7.1.2	Exponential Waiting Times	444
7.1.3	On-road Measurements of Aerosols	447
7.2	Continuous-time Stochastic Processes	451
7.2.1	Random Variables in $L^2(\Omega, F)$	451
7.2.2	Derivatives and Integrals of Random Functions.....	452
7.2.3	Examples	456
7.3	Fourier Representation of a Stationary Stochastic Process ...	460
7.3.1	The Harmonic Process and its Fourier Representation .	460
7.3.2	Fourier Representation of a Stationary Stochastic Process	467
7.3.3	Covariance Function and Spectrum	469
7.3.4	Types of Spectra	472
7.3.5	Bandwidth of a Spectrum	475
7.4	Spectra of Linear Processes	477
7.4.1	Stochastic Filters.....	477
7.4.2	Examples	480
7.5	Supplements	485
7.5.1	Gamma Distribution	485
7.5.2	Integrating with Respect to an Orthogonal Increment Process	486
7.5.3	Moments of the Harmonic Process	489
7.5.4	Spectrum of a Discrete-time Stochastic Process	491
7.5.5	Spectrum and/or Covariance Function?	493
7.6	Problems	495

8	Does a Periodogram Estimate a Spectrum?	499
8.1	The Periodogram	500
8.2	Calculated from a Realisation of a White Noise Process	503
8.2.1	Its Properties	503
8.2.2	Tests	505
8.3	Its Expectation Function	511
8.4	Its Covariance Function and its Distribution	518
8.5	Supplements	520
8.5.1	Expectation Function of the Periodogram	520
8.5.2	The Periodogram of a Linear Process	523
8.6	Problems	525
9	Estimators for a Continuous Spectrum	527
9.1	The Model	528
9.2	Direct Spectral Estimator	529
9.2.1	Definition and Expectation	530
9.2.2	Variance and Covariance Functions	539
9.2.3	Probability Distribution	546
9.2.4	Calculated for Non-Fourier Frequencies	549
9.2.5	Alternatives: Parametric Estimation, Pre-Whitening	552
9.2.6	Summary	556
9.3	Smoothed Direct Spectral Estimator	557
9.3.1	Discretely Smoothed Direct Spectral Estimator	558
9.3.2	Lag Window Spectral Estimator	568
9.3.3	Moment Functions of the Lag Window Estimator	574
9.3.4	Distribution of the Lag Window Estimator	586
9.3.5	Estimating a Spectrum with Unknown Bandwidth	591
9.3.6	Summary and Alternatives	598
9.4	Examples	599
9.4.1	Microseisms	599
9.4.2	Turbulent Atmospheric Flow	610
9.5	Supplements	620
9.5.1	Direct Spectral Estimator and Autocorrelation of Tapered Observations	620
9.5.2	Expectation Function of a Direct Spectral Estimator	621
9.5.3	Covariance Function of a Direct Spectral Estimator	622
9.5.4	Widths of Smoothing Kernels	625
9.5.5	Variance Function of a Lag Window Estimator	627
9.5.6	Spectral Estimation in R	629
9.6	Problems	634

10 Estimators for a Spectrum Having a Discrete Part	641
10.1 Estimating Oscillations with Fourier Frequencies	642
10.1.1 The Model	642
10.1.2 Diagnostics	645
10.1.3 Example and Summary	646
10.2 Estimating Oscillations with Unknown Frequencies	650
10.2.1 Sum of a Harmonic Process and White Noise	650
10.2.2 Sum of a Harmonic Process and Coloured Noise	660
10.2.3 Summary	674
10.3 Supplements	675
10.3.1 Estimating the Model defined in Sect. 10.1	675
10.3.2 Detrending and Spectral Estimation: an Example	676
10.4 Problems	679
A Answers to Problems	683
References	697
Index	705
