# Contents

<b>Introduction</b> .....	1
<b>1 Equilibrium Components with Arbitrary Index</b> .....	7
1.1 Preliminaries .....	8
1.2 The Lemke-Howson Algorithm .....	15
1.3 Index Theory .....	18
1.4 Construction of Equilibrium Components with Arbitrary Index	24
<b>2 A Reformulation of the Index for Equilibria in Bimatrix Games</b>	31
2.1 The Dual Construction .....	32
2.2 Labelling and Characterisation of Nash Equilibria .....	40
2.3 The Lemke-Howson Algorithm in the Labelled Dual Construction .....	45
2.4 An Orientation for Nash Equilibria .....	50
<b>3 Sperner's Lemma and Labelling Theorems</b> .....	59
3.1 Sperner's Lemma .....	60
3.2 The Application to Bimatrix Games .....	72
3.3 A Topological Interpretation of the Dual Construction .....	79
<b>4 A Strategic Characterisation of the Index</b> .....	85
4.1 A Geometric Interpretation .....	86
4.2 Some Technical Requisites .....	91
4.3 A Game Theoretic Characterisation of the Index .....	95

<b>5</b>	<b>Outside Option Equilibrium Components</b> .....	101
5.1	A Generalised Version of Sperner's Lemma .....	102
5.2	The Index for Outside Option Equilibrium Components .....	105
5.3	Degenerate Games and General Equilibrium Components ...	113
<b>6</b>	<b>Index Zero and Hyperstability</b> .....	117
6.1	Index Zero Labellings .....	118
6.2	Index Zero Outside Option Equilibrium Components .....	124
6.3	Restricted Duplication of Strategies and Index Zero: An Example .....	138
	<b>References</b> .....	143
	<b>Symbolindex</b> .....	147
	<b>Index</b> .....	149
