Part I Atomic and Surface Data Issues in Nuclear Fusion

1 Plasma–Wall Interaction: Status and Data Needs

<i>U. Samm</i>	3
1.1 Introduction	3
1.2 Key Issues of Plasma–Wall Interaction	4
1.3 The ITER-Concept to Control Plasma–Wall Interaction	7
1.4 The Crucial Processes and Data Needs for Modeling	10
1.4.1 The Problem of Tritium Retention in Fusion Devices	10
1.4.2 Location and Strength of Impurity Sources	12
1.4.3 Migration of Eroded Materials and Layer Formation by Deposited Impurities	17
1.4.4 Modeling of Erosion and Deposition	21
1.4.5 Release of Hydrogen Atoms and Molecules from Recycling Processes	24
1.5 Summary and Conclusions	26
References	27

2 Modeling of Fusion Edge Plasmas: Atomic and Molecular Data Issues

<i>D. Reiter</i>	29
2.1 Introduction	29
2.1.1 Computational Edge Plasma Models	30
2.2 The Fusion Edge Plasma Models	34
2.2.1 Collisional Contributions to Braginskii Equations	42
2.2.2 Standard Form of Source Terms	44
2.2.3 The I-Integral Representation	45
2.2.4 Application to Elastic Neutral Ion Collisions	48
2.3 Applications	50
2.3.1 Applications to TEXTOR	52
2.3.2 Applications to ASDEX Upgrade	54
2.4 Conclusions, Outlook	59
References	59

3 Energy Deposition from ELMs in Fusion Devices

<i>A. Loarte</i>	61
3.1 Introduction	61
3.1.1 Features of the Regime of Enhanced Energy Confinement (H-Mode)	62
3.1.2 Characteristics of ELMs and Their Effects on the Pedestal Plasma	66
3.2 Characteristics of Type I ELM Energy and Particle Losses from the Core Plasma	71
3.2.1 Dynamics and Timescales for the Type I ELM Energy and Particle Losses from the Core Plasma	74
3.2.2 Magnitude of the Type I ELM Energy and Particle Losses from the Core Plasma and Their Extrapolation to Next Step Burning Plasma Experiments	76
3.3 Energy Fluxes to PFCs During Type I ELMs in Existing Experiments and Implications for Burning Plasma Experiments	81
3.3.1 Spatial and Temporal Characteristics of the Type I ELM Energy Fluxes to PFCs	81
3.3.2 Implications of the Type I ELM Energy Fluxes to PFCs in Burning Plasma Experiments: Application to the ITER Reference $Q_{DT} = 10$ Scenario ...	87
3.4 Summary and Conclusions	93
References	94

Part II Plasma Diagnostics

4 Molecular Diagnostics of Cold Edge Plasmas

<i>U. Fantz</i>	99
4.1 Molecules in Low Temperature Plasmas	99
4.2 Molecular Emission Spectroscopy	101
4.2.1 Interpretation of Molecular Spectra	102
4.2.2 Molecular Hydrogen and Collisional–Radiative Modeling	106
4.2.3 Flux Measurements	108
4.3 Role of Molecular Hydrogen in Recombination (MAR)	109
4.4 Vibrational Population of Hydrogen	111
4.4.1 Measurements and Calculations	112
4.4.2 Surface Effects	113
4.5 Hydrocarbons and Chemical Erosion	114
4.5.1 Dissociation, Radiation and Carbon Fluxes	115
4.5.2 Gas Puff Experiments	117
4.5.3 Erosion Yields in Laboratory Plasmas	117
4.6 Conclusions	119
References	119

5 Divertor Spectroscopy with Molecular Transport

<i>H. Kubo, H. Takenaga, T. Nakano, S. Higashijima, K. Shimizu, K. Sawada, S. Kobayashi, the JT-60 Team</i>	121
5.1 Introduction	121
5.2 Hydrogen Molecules in Attached Divertor Plasmas	122
5.3 Hydrocarbon Molecules in Attached Divertor Plasmas	127
5.4 Molecules in Detached Divertor Plasmas	129
5.5 Conclusions	132
References	133

6 High-Temperature Plasma Edge Diagnostics

<i>A. Pospiesznyk</i>	135
6.1 Introduction	135
6.2 Techniques and Methods	137
6.2.1 Observation Geometries	137
6.2.2 Evaluation Methods	138
6.3 Results	141
6.3.1 Relevant Elements	141
6.3.2 Carbon	142
6.3.3 Hydrocarbons	144
6.3.4 Hydrogen/Deuterium	147
6.3.5 Low-Z Impurities: Oxygen	151
6.3.6 Medium-Z Impurities: Neon and Silicon	152
6.3.7 High-Z Impurities: Molybdenum and Tungsten	154
6.3.8 Atomic Helium Beams	155
6.4 Conclusions and Recommendations	158
References	158

7 X-ray Spectroscopy of High n Transitions of He- and Ne-Like Ions in Alcator C-Mod Plasmas

<i>J.E. Rice, K.B. Fournier, E.S. Marmor, J.L. Terry, U.I. Safronova</i> ...	163
7.1 Introduction	163
7.2 Experiment Description	165
7.3 Code Descriptions	166
7.4 He-Like and Neighboring Ions	167
7.5 Ne-Like and Neighboring Ions	172
7.6 Conclusions	178
References	179

8 High-Temperature Plasmas Diagnostics by X-ray Spectroscopy in the Low Density Limit

<i>G. Bertschinger, O. Marchuk</i>	183
8.1 Introduction	183
8.2 X-ray Spectrometers	185

8.3	Atomic Physics of He-Like Spectra	187
8.3.1	Excitation	188
8.3.2	Dielectronic Recombination	189
8.3.3	Radiative Recombination	190
8.3.4	Charge Exchange Recombination	191
8.3.5	Inner-Shell Excitation	191
8.3.6	Inner-Shell Ionization	191
8.4	Determination of Plasma Parameters	192
8.4.1	Electron and Ion Temperature, Toroidal Plasma Velocity	194
8.4.2	Relative Abundance of Charged States	194
8.5	Conclusions	197
	References	198

Part III Surface Processes and Material Issues

9 Review and Status of Physical Sputtering and Chemical Erosion of Plasma Facing Materials

<i>J. Roth</i>	203
9.1 Introduction	203
9.2 Physical Sputtering	204
9.2.1 Sputtering of Pure Elements	204
9.2.2 Sputtering by Non-recycling Ions (Mixed Materials)	209
9.2.3 Extrapolation to Fusion Reactor Conditions	212
9.3 Chemical Erosion	213
9.3.1 Present Understanding of Atomistic Processes	213
9.3.2 Eroded Species and Sticking Coefficient	215
9.3.3 Flux Dependence	218
9.3.4 Fluence Dependence and Surface Topography	219
9.3.5 Doping for Reduction of the Chemical Erosion Yield	219
9.3.6 Open Questions and Data Needs	221
References	222

10 Hydrogen Retention in and Release from Carbon Materials

<i>A.A. Haasz, J.W. Davis</i>	225
10.1 Introduction	225
10.2 Hydrogen Retention in Pure and Doped Carbon Materials	226
10.2.1 Implantation and Diffusion	226
10.2.2 Co-deposition	230
10.2.3 Effect of Neutron Damage	230

10.3	Hydrogen Release from Graphite	231
10.3.1	Re-emission	231
10.3.2	Thermal Release During Thermal Desorption Spectroscopy (TDS)	232
10.4	H-Isotope Removal from C-Based Co-deposits	234
10.4.1	Tritium Removal Experience in TFTR and JET	235
10.4.2	R&D of Co-deposit Removal Techniques	237
10.5	Conclusion	242
	References	244

11 Interaction of Low-Energy Ions and Hydrocarbon Radicals with Carbon Surfaces

	<i>W. Jacob, C. Hopf, M. Meier, T. Schwarz-Selinger</i>	249
11.1	Introduction	249
11.2	Properties of Hydrocarbon Layers	251
11.3	Experimental	254
11.3.1	The Cavity Technique	254
11.3.2	Particle-Beam Experiments	257
11.4	Results	258
11.4.1	Surface Loss Probabilities	258
11.4.2	Sticking Coefficient of CH ₃ Radicals	262
11.4.3	Synergistic Interaction of CH ₃ and Atomic Hydrogen	267
11.4.4	Chemical Sputtering	272
11.4.5	Ion-Induced Deposition	278
11.5	Conclusions	280
	References	281

12 Tritium Inventory in the Materials of the ITER Plasma-Facing Components

	<i>G. Federici, C.H. Skinner</i>	287
12.1	Introduction	288
12.2	Historical Perspective	289
12.3	Highlights of the ITER Design and Suitable Plasma-Facing Material Options	291
12.3.1	ITER Design	291
12.3.2	Plasma Facing Materials	293
12.3.3	Tritium-Related Constraints on a BPX Operation Schedule	296
12.3.4	Summary of Recent Experimental Findings	299
12.4	ITER Tritium Retention Estimates and Uncertainties	305
12.5	Further Research and Development (R&D) Needs	308
12.6	Conclusions	312
	References	314

13 Mixed and High-Z Plasma-Facing Materials in TEXTOR

<i>E. Vietzke, A. Pospieszczyk, S. Brezinsek, A. Kirschner, A. Huber, T. Hirai, Ph. Mertens, V. Philipps, G. Sergienko</i>	319
13.1 Introduction.....	319
13.2 Silicon–Carbon Material	320
13.2.1 Siliconization	320
13.2.2 Silicon-Doped CFC Material	321
13.3 Twin Limiter Experiments	322
13.4 B ₄ C-Coated Copper Limiter	326
13.5 Modeling of Erosion, Deposition and Impurity Transport with the ERO-TEXTOR Code.....	329
13.6 Conclusions and Outlook	331
References	332

14 Beryllium and Liquid Metals as Plasma Facing Materials

<i>R.P. Doerner</i>	335
14.1 Introduction.....	335
14.2 Erosion	336
14.2.1 Physical Sputtering of Beryllium	336
14.2.2 Mixed-Material Erosion	338
14.2.3 Physical Sputtering of Liquid Metal Surfaces.....	342
14.2.4 Erosion of Surfaces at Elevated Temperature.....	345
14.3 Hydrogen Isotope Retention	347
14.3.1 Retention in Beryllium	347
14.3.2 Retention in BeO and Mixed Be Materials	349
14.3.3 Retention in Li and Ga	352
14.4 Conclusion	354
References	355

Part IV Databases

15 IAEA Databases and Database Establishment Programs

<i>R.E.H. Clark, D. Humbert</i>	361
15.1 Introduction.....	361
15.2 Overview	362
15.3 Advisory Groups.....	362
15.4 Co-ordinated Research Projects	364
15.5 A+M Unit Products	366
15.5.1 Electronic Databases.....	366
References	370

16 NIFS DATABASE and Cooperation with IAEA DCN

<i>T. Kato, I. Murakami</i>	371
16.1 Introduction	371
16.2 NIFS DATABASE	372
16.3 IFS DPC Collaboration Program	374
16.3.1 Domestic Collaboration	374
16.3.2 International Collaboration	376
16.4 Data Center Network (DCN)	378
16.5 Recent Research Activities	380
16.6 Conclusion	382
References	382

17 The NIST Atomic Structure Databases

<i>W.L. Wiese</i>	385
17.1 Introduction	385
17.2 Data Dissemination on the Internet	386
17.3 The Scope of the NIST ASD Database	387
17.4 Interactive Features	389
17.5 Related NIST Databases	389
17.6 Some Sample Searches	390
17.7 Data Quality	395
17.8 Outlook	396
References	397

18 The Atomic Data and Analysis Structure

<i>H.P. Summers, M.G. O'Mullane</i>	399
18.1 Introduction	399
18.2 General Principles of ADAS	400
18.3 ADAS Code and Data Organization	401
18.3.1 IDL-ADAS	401
18.3.2 Data and Data Formats	404
18.3.3 Offline-ADAS	405
18.4 Current Directions	408
18.4.1 Errors and Uncertainties	408
18.4.2 Non-Maxwellian Electron Distributions	409
18.4.3 Spectral Visualization for Heavy Species	410
18.5 ADAS Special Projects	411
18.5.1 The DR Project	411
References	413

19 Collision Processes of Atomic and Molecular Hydrogen in Fusion Plasmas: The Cross-Section Data Status

<i>R.K. Janev</i>	415
19.1 Introduction.....	415
19.2 Hydrogen Atom Collision Processes	417
19.3 Collision Processes of Molecular Hydrogen and Its Ions	420
19.3.1 Collision Processes of Hydrogen Molecules	420
19.3.2 Decay Processes of Electronically Excited H ₂ States	424
19.3.3 Collision Processes of H ₂ ⁺ Ions	425
19.3.4 Processes Involving H ⁻ and H ₃ ⁺ Ions	428
19.4 Major Gaps in the H/H ₂ Collision Database.....	429
19.5 Concluding Remarks	431
References	432

20 Partial and Differential Electron Impact Ionization Cross-Sections for Small Hydrocarbon Molecules

<i>G. Gluch, S. Feil, P. Scheier, W. Schustereder, T. Tepnual,</i> <i>L. Feketeova, C. Mair, S. Matt-Leubner, A. Stamatovic, T.D. Märk</i> ...	437
20.1 Introduction.....	437
20.2 Experimental.....	440
20.3 Results	442
References	454
