

Table of Contents

1	INTRODUCTION AND OBJECTIVES	1
2	STRUCTURE OF POLYSACCHARIDES	5
2.1	Structural Features	5
2.1.1	Cellulose	6
2.1.2	β -(1 $\rightarrow$ 3)-Glucans	7
2.1.3	Dextran	8
2.1.4	Pullulan	8
2.1.5	Starch	9
2.1.6	Hemicelluloses	9
2.1.7	Guar	12
2.1.8	Inulin	12
2.1.9	Chitin and Chitosan	12
2.1.10	Alginates	14
3	ANALYSIS OF POLYSACCHARIDE STRUCTURES	15
3.1	Optical Spectroscopy	16
3.2	NMR Spectroscopy	18
3.2.1	^{13}C NMR Spectroscopy	19
3.2.2	^1H NMR Spectroscopy	26
3.2.3	Two-dimensional NMR Techniques	31
3.2.4	Chromatography and Mass Spectrometry	34
4	ESTERS OF CARBOXYLIC ACIDS – CONVENTIONAL METHODS	41
4.1	Acylation with Carboxylic Acid Chlorides and Anhydrides	41
4.1.1	Heterogeneous Acylation – Industrial Processes	41
4.1.2	Heterogeneous Conversion in the Presence of a Base	46
5	NEW PATHS FOR THE INTRODUCTION OF ORGANIC ESTER MOIETIES	53
5.1	Media for Homogeneous Reactions	53
5.1.1	Aqueous Media	54
5.1.2	Non-aqueous Solvents	57
5.1.3	Multicomponent Solvents	62
5.1.4	Soluble Polysaccharide Intermediates	70

5.2	In Situ Activation of Carboxylic Acids	75
5.2.1	Sulphonic Acid Chlorides	76
5.2.2	Dialkylcarbodiimide	82
5.2.3	<i>N,N'</i> -Carbonyldiimidazole	86
5.2.4	Iminium Chlorides	103
5.3	Miscellaneous New Ways for Polysaccharide Esterification	106
5.3.1	Transesterification	106
5.3.2	Esterification by Ring Opening Reactions	112
6	SULPHONIC ACID ESTERS	117
6.1	Mesylates	117
6.2	Tosylates	120
6.3	Miscellaneous Sulphonic Acid Esters	128
7	INORGANIC POLYSACCHARIDE ESTERS	129
7.1	Sulphuric Acid Half Esters	129
7.2	Phosphates	136
7.3	Nitrates	140
8	STRUCTURE ANALYSIS OF POLYSACCHARIDE ESTERS	143
8.1	Chemical Characterisation – Standard Methods	145
8.2	Optical Spectroscopy	145
8.3	NMR Measurements	149
8.4	Subsequent Functionalisation	155
8.4.1	NMR Spectroscopy on Completely Functionalised Derivatives	155
8.4.2	Chromatographic Techniques	162
9	POLYSACCHARIDE ESTERS WITH DEFINED FUNCTIONALISATION PATTERN	169
9.1	Selective Deacylation	170
9.2	Protective Group Technique	172
9.2.1	Tritylation	173
9.2.2	Bulky Organosilyl Groups	176
9.3	Medium Controlled Selectivity	180
10	SELECTED EXAMPLES OF NEW APPLICATIONS	181
10.1	Materials for Selective Separation	182
10.1.1	Stationary Phases for Chromatography	184
10.1.2	Selective Membranes	184
10.2	Biological Activity	186
10.3	Carrier Materials	187
10.3.1	Prodrugs on the Basis of Polysaccharides	188
10.3.2	Nanoparticles and Hydrogels	190
10.3.3	Plasma Substitute	192

11	OUTLOOK	195
12	EXPERIMENTAL PROTOCOLS	197
	REFERENCES	217
	SUBJECT INDEX	229
