# **Voice and Speech Quality Perception**

## **Assessment and Evaluation**

With 34 Figures

# Table of Contents

1. Introduction .....	1
2. Aims and Methods of Speech Quality Assessment .....	5
2.1 Summary .....	9
3. Aspects of Quality: Laying the Foundations.....	11
3.1 Quality as the result of tests and assessments .....	11
3.2 Quality as the design goal .....	16
3.3 Designing the quality of innovative entities .....	18
3.4 Summary .....	20
4. Speech Technology and Speech Quality Perception.....	23
4.1 The priorities of modern speech technology .....	23
4.2 Speech synthesis and its different design aims .....	28
4.2.1 The history of speech synthesis: Emphases and aims .....	29
4.2.2 Experience of techniques and expectations of quality .....	33
4.3 Elements of quality of speech synthesizers .....	35
4.3.1 The system input .....	35
4.4 Text-to-speech synthesis: The text as an element of quality .....	37
4.5 Synthetic speech as a causal sign .....	41
4.6 Functional internal system entities as elements of quality .....	46
4.7 Speech synthesis and associated goals in research .....	47
4.8 Summary .....	49
5. From Speech Perception to Assessment of Quality .....	53
5.1 Perception and cognition .....	53
5.2 Perception between individuals: Form and adaptation .....	55
5.3 Inter-individual perception .....	58
5.4 Speech quality assessment as a measuring process .....	59
5.5 Measuring and measurands .....	61
5.6 Measuring processes vs. investigative processes .....	64
5.7 Measuring instruments and measuring organs .....	65
5.7.1 Instrumental measuring methods (a digression) .....	65
5.8 Summary .....	68

6. Quality Assessment in View of System Theory .....	71
7. Auditory Measuring Procedures .....	75
7.1 Measuring and scaling methods in psycho-acoustics .....	75
7.2 Measuring scales .....	80
7.2.1 Standard scales .....	80
7.2.2 The scale as a function of the measurand .....	82
7.3 Summary .....	86
8. Formal aspects of speech quality measurements .....	89
8.1 The measuring object »speech« .....	89
8.2 Toward the quality of speech quality measurements .....	92
8.3 Speech quality tests as measuring tools .....	96
8.3.1 Intelligibility tests in speech technology and audiology .....	97
8.4 Summary .....	102
9. Towards the Structure of Speech Quality Measurements .....	105
9.1 Taxonomy for quality of speech synthesis .....	105
9.2 Aspects specific to usage .....	107
9.3 Systemic view of speech quality measurements .....	109
10. Segmental Intelligibility: A Dimension of Quality.....	113
10.1 Intelligibility and comprehensibility tests: An introduction .....	114
10.1.1 The Rhyme Test by Sotscheck .....	114
10.1.2 The »SAM Segmental Test« .....	116
10.1.3 The Semantically Unpredictable Sentences SUS Test .....	117
10.1.4 The CLID Test .....	118
10.1.5 General information on the CLID methodology .....	119
10.1.6 Test vocabulary as a measuring influence .....	124
10.2 On the comparability of study results .....	129
10.2.1 On the influence of scaling .....	131
10.2.2 On the influence of the stimulus context .....	133
10.2.3 On the influence of syllable structure and frequency .....	134
10.2.4 On the validity of the test results .....	139
10.3 Summary .....	141
11. The Cluster Similarity Study.....	143
11.1 On the background of the study .....	144
11.2 Details of the study .....	148
11.3 On rating and scaling .....	149
11.4 Natural voice: Similarity profile of pre-nuclear consonant clusters .....	153

11.5 Comparison of the similarity profile of natural and synthetic speech ....	158
11.6 Similarity profile for various vowel contexts .....	164
11.7 Summary .....	165
12. Conclusion .....	175
13. References .....	179
Definitions .....	199
Subject Index .....	201
Author Index .....	205
