Preface	xix
Preface to 2nd Edition	xxii
1 Introduction	1
1.1 History of Solar Corona Observations	1
1.2 Nomenclature of Coronal Phenomena	8
1.3 The Solar Magnetic Cycle	14
1.4 Magnetic Field of the Solar Corona	17
1.5 Geometric Concepts of the Solar Corona	20
1.6 Density Structure of the Solar Corona	23
1.7 Temperature Structure of the Solar Corona	26
1.8 Plasma- β Parameter of the Solar Corona	28
1.9 Chemical Composition of the Solar Corona	30
1.10 Radiation Spectrum of the Solar Corona	32
1.11 Summary	36
2 Thermal Radiation	37
2.1 Radiation Transfer and Observed Brightness	37
2.2 Black-Body Thermal Emission	39
2.3 Thermal Bremsstrahlung (Free-Free Emission)	42
2.4 Atomic Energy Levels	47
2.5 Atomic Transition Probabilities	50
2.6 Ionization and Recombination Processes	52
2.7 Ionization Equilibrium and Saha Equation	55
2.8 Emission Line Spectroscopy	57
2.9 Radiative Loss Function	61
2.10 First Ionization Potential (FIP) Effect	63
2.11 Summary	66
3 Hydrostatics	67
3.1 Hydrostatic Scale Height	67
3.2 Hydrostatic Weighting Bias	71
3.3 Multi-Hydrostatic Corona	76

3.4	Loop Geometry and Inclination	83
3.4.1	Vertical Semi-Circular Loops	83
3.4.2	Inclined Semi-Circular Loops	84
3.4.3	Diverging Semi-Circular Loops	85
3.4.4	Coordinate Transformations	86
	Image (or Observer's) Coordinate System	87
	Heliographic Coordinate System	88
	Loop Plane Coordinate System	88
	Column Depth of Loops with Constant Cross Section	89
3.5	Loop Line-of-Sight Integration	89
3.5.1	Bright Single Loop	90
3.5.2	Faint Single Loop	92
3.5.3	Statistical Distribution of Loops	92
3.6	Hydrostatic Solutions and Scaling Laws	93
3.6.1	Uniform Heating and RTV Scaling Laws	94
3.6.2	Nonuniform Heating and Gravity	96
3.6.3	Analytical Approximations of Hydrostatic Solutions	96
3.7	Heating Function	99
3.8	Instrumental Response Functions	108
3.9	Observations of Hydrostatic Loops	109
3.10	Hydrostatic DEM Distributions	113
3.11	Summary	116
4	Hydrodynamics	117
4.1	Hydrodynamic Equations	117
4.2	Steady-Flow and Siphon-Flow Solutions	122
4.3	Thermal Stability of Loops	127
4.3.1	Radiative Loss Instability	128
4.3.2	Heating Scale Instability	133
4.4	Observations of Flows in Coronal Loops	135
4.5	Observations of Cooling Loops	139
4.5.1	Cooling Delays	141
4.5.2	Iron Abundance and Filling Factors	142
4.5.3	Scaling Law of Cooling Loops	145
4.5.4	Catastrophic Cooling Phase	145
4.6	Observations of Non-Hydrostatic Loops	148
4.6.1	TRACE Observations	150
4.6.2	Theoretical Models	153
4.7	Hydrodynamic Numerical Simulations of Loops	155
4.8	Hydrodynamics of the Transition Region	159
4.9	Hydrodynamics of Coronal Holes	167
4.10	Hydrodynamics of the Solar Wind	172
4.11	Summary	173

5	Magnetic Fields	175
5.1	Electromagnetic Equations	176
5.1.1	Maxwell's Equations	176
5.1.2	Ampère's Law	176
5.1.3	Ohm's Law	177
5.1.4	Induction Equation	177
5.2	Potential Fields	178
5.2.1	Unipolar Field	179
5.2.2	Dipole Field	180
5.2.3	Potential-Field Calculation Methods	182
	Green's Function Methods	182
	Eigenfunction Expansion Methods	184
5.3	Force-Free Fields	186
5.3.1	Linear Force-Free Fields	187
5.3.2	Sheared Arcade	188
5.3.3	Nonlinear Force-Free Field Calculation Methods	190
	The Vertical Integration Method	190
	The Boundary Integral Method	192
	The Euler Potential Method	193
	Full MHD Method	194
	Potential Vector Grad—Rubin Method	195
	Evolutionary Methods	195
5.4	Magnetic Field in Active Region Corona	196
5.4.1	3D Stereoscopy of Active Region Loops	196
5.4.2	Alfvén Velocity in Active Regions	202
5.4.3	Non-Potentiality of Soft X-Ray Loops	205
5.4.4	The Width Variation of Coronal Loops	209
5.5	Magnetic Helicity	213
5.5.1	Uniformly Twisted Cylindrical Force-Free Fluxtubes	215
5.5.2	Observations of Sigmoid Loops	217
5.5.3	Conservation of Helicity	218
5.6	Magnetic Nullpoints and Separators	220
5.6.1	Topological Definitions	220
5.6.2	Observations of Coronal Nullpoints	222
5.7	Magnetic Field Measurements in Radio	224
5.7.1	Magnetic Fields Measured from Free-Free Emission	224
5.7.2	Gyroresonance Emission	227
5.7.3	Gyroresonance Stereoscopy	230
5.7.4	Non-Potential Field Modeling of Gyroresonance Emission	233
5.8	Magnetic Field in the Transition Region	234
5.8.1	The Magnetic Canopy Structure	235
5.8.2	Force-Freeness of the Chromospheric Magnetic Field	237
5.9	Summary	239

6	Magneto-Hydrodynamics (MHD)	241
6.1	MHD Equations	241
6.1.1	Particle Conservation	242
6.1.2	Momentum or Force Equation	243
6.1.3	Ideal MHD	244
6.1.4	Energy Equation	245
6.1.5	Resistive MHD	246
6.2	MHD of Coronal Loops	247
6.2.1	Magneto-Statics in Vertical Fluxtubes	247
6.2.2	Lorentz Force near Magnetic Nullpoints	249
6.2.3	Lorentz Force in Curved Fluxtubes	252
6.2.4	Dynamics of Twisted Fluxtubes	253
6.2.5	MHD Simulations of Emerging Fluxtubes	257
6.2.6	MHD Simulations of Coronal Loops	259
6.3	MHD Instabilities in Coronal Loops	263
6.3.1	Rayleigh–Taylor Instability	264
6.3.2	Kruskal–Schwarzschild Instability	265
6.3.3	Kelvin–Helmholtz Instability	265
6.3.4	Ballooning Instability	266
6.3.5	Convective Thermal Instability	266
6.3.6	Radiatively-Driven Thermal Instability	266
6.3.7	Heating Scale-Height Instability	268
6.3.8	Resistive Instabilities	268
6.3.9	Kink Instability ($m=1$)	269
6.3.10	Sausage Instability ($m=0$)	270
6.4	MHD of Quiescent Filaments and Prominences	270
6.4.1	Magnetic Field Configuration	272
6.4.2	Equilibrium Models	275
6.4.3	Formation and Evolution	278
	Coronal Condensation	278
	Chromospheric Injection	280
	Footpoint Heating	281
	Disappearance of Filaments/Prominences	281
6.5	Summary	282
7	MHD Oscillations	283
7.1	Dispersion Relation of MHD Waves	284
7.1.1	Unbounded Homogeneous Medium	285
7.1.2	Single Magnetic Interface	289
7.1.3	Slender Slab Geometry	291
7.1.4	Cylindrical Geometry	291
7.2	Fast Kink-Mode Oscillations	293
7.2.1	Kink-Mode Period	293
7.2.2	Magnetic Field Strength and Coronal Seismology	294
7.2.3	Observations of Kink-Mode Oscillations	295
7.2.4	Prominence Oscillations	301

7.3	Fast Sausage-Mode Oscillations	304
7.3.1	The Wave Number Cutoff	304
7.3.2	Sausage-Mode Period	306
7.3.3	Imaging Observations of Sausage-Mode Oscillations	307
7.3.4	Non-Imaging Observations of Sausage-Mode Oscillations	311
7.4	Slow-Mode (Acoustic) Oscillations	316
7.4.1	Slow-Mode Oscillation Period	316
7.4.2	Observations of Slow-Mode Oscillations	317
7.5	Damping of MHD Oscillations	320
7.5.1	Non-Ideal MHD Effects	321
7.5.2	Lateral Wave Leakage	322
7.5.3	Footpoint Wave Leakage	323
7.5.4	Phase Mixing	324
7.5.5	Resonant Absorption	325
7.5.6	Observational Tests	326
7.6	Summary	329
8	Propagating MHD Waves	331
8.1	Propagating MHD Waves in Coronal Loops	332
8.1.1	Evolutionary Equation for Slow-Mode MHD Waves	332
8.1.2	Observations of Acoustic Waves in Coronal Loops	334
8.1.3	Propagating Fast-Mode Waves in Coronal Loops	336
8.2	Propagating MHD Waves in the Open Corona	341
8.2.1	Evolutionary Equation of MHD Waves in Radial Geometry	341
8.2.2	Observations of Acoustic Waves in Open Corona	344
8.2.3	Spectral Observations of Alfvén Waves in the Open Corona	346
8.3	Global Waves	348
8.3.1	Moreton Waves, EIT Waves, and CME Dimming	348
8.3.2	Modeling and Simulations of Global Waves	352
8.4	Summary	354
9	Coronal Heating	355
9.1	Heating Energy Requirement	356
9.2	Overview of Coronal Heating Models	359
9.3	DC Heating Models	364
9.3.1	Stress-Induced Reconnection	364
9.3.2	Stress-Induced Current Cascade	366
9.3.3	Stress-Induced Turbulence	368
9.4	AC Heating Models	371
9.4.1	Alfvénic Resonance	371
9.4.2	Resonant Absorption	372
9.4.3	Phase Mixing	374
9.4.4	Current Layers	374
9.4.5	MHD Turbulence	375
9.4.6	Cyclotron Resonance	376
9.5	Other Coronal Heating Scenarios	377

9.5.1	Acoustic Heating	377
9.5.2	Chromospheric Reconnection	377
9.5.3	Velocity Filtration	378
9.6	Observations of Heating Events	380
9.6.1	Microflares — Soft X-ray Transient Brightenings	382
9.6.2	Nanoflares — EUV Transient Brightenings	387
9.6.3	Transition Region Transients — Explosive Events, Blinkers	388
9.7	Scaling Laws of Heating Events	390
9.7.1	Geometric Scaling	391
9.7.2	Density, Temperature, and Energy Scaling	393
9.7.3	Magnetic Scaling	396
9.8	Statistics of Heating Events	398
9.8.1	Theory of Frequency Distributions	398
9.8.2	Frequency Distributions of Flare Parameters	400
9.8.3	Energy Budget of Flare-like Events	402
9.8.4	Measurements of Frequency Distributions	403
9.9	Summary	406
10	Magnetic Reconnection	407
10.1	Steady 2D Magnetic Reconnection	408
10.1.1	Sweet—Parker Reconnection Model	409
10.1.2	Petschek Reconnection Model	410
10.1.3	Generalizations of Steady 2D Reconnection Models	412
10.1.4	Numerical Simulations of Steady 2D Reconnection	413
10.2	Unsteady/Bursty 2D Reconnection	414
10.2.1	Tearing-Mode Instability and Magnetic Island Formation	414
10.2.2	Coalescence Instability	416
10.2.3	Dynamic Current Sheet and Bursty Reconnection	417
10.3	3D Magnetic Reconnection	421
10.3.1	3D X-Type Reconnection	421
10.3.2	Topology of 3D Nullpoints	422
10.3.3	3D Spine, Fan, and Separator Reconnection	424
10.4	Magnetic Reconnection in the Chromosphere	426
10.4.1	Magnetic Flux Emergence	426
10.4.2	Magnetic Flux Cancellation	428
10.4.3	Chromospheric Reconnection Jets	435
10.5	Flare/CME Models	436
10.5.1	The Standard 2D Flare Model	436
10.5.2	The Emerging Flux Model	439
10.5.3	The Equilibrium Loss Model	441
10.5.4	2D Quadrupolar Flare Model	443
10.5.5	The Magnetic Breakout Model	445
10.5.6	3D Quadrupolar Flare Models	447
10.5.7	Unification of Flare Models	449
10.6	Flare/CME Observations	452
10.6.1	Evidence for Reconnection Geometry	452

X-Point Geometry	452
Quadrupolar Geometry	455
3D Nullpoint Geometry	459
10.6.2 Evidence for Reconnection Flows and Jets	460
10.6.3 Large-Scale Magnetic Restructuring	462
10.6.4 Open Issues on Magnetic Reconnection	462
10.7 Summary	463
11 Particle Acceleration	465
11.1 Basic Particle Motion	466
11.1.1 Particle Orbits in Magnetic Fields	466
11.1.2 Particle Drifts in Force Fields	467
11.1.3 Relativistic Particle Energies	468
11.2 Overview of Particle Acceleration Mechanisms	469
11.3 Electric DC-Field Acceleration	471
11.3.1 Sub-Dreicer DC Electric Fields	472
11.3.2 Super-Dreicer DC Electric Fields	474
11.3.3 Acceleration near Magnetic X-Points	476
11.3.4 Acceleration near Magnetic O-Points	478
11.3.5 Acceleration in Time-Varying Electromagnetic Fields	481
Betatron Acceleration	481
Field-Aligned Electric Potential Drops	482
Coalescence and X-Point Collapse	483
11.4 Stochastic Acceleration	486
11.4.1 Gyroresonant Wave-Particle Interactions	487
11.4.2 Stochastic Acceleration of Electrons	493
11.4.3 Stochastic Acceleration of Ions	497
11.4.4 Acceleration by Electrostatic Wave-Particle Interactions	499
11.4.5 General Evaluation of Stochastic Acceleration Models	500
11.5 Shock Acceleration	500
11.5.1 Fermi Acceleration	501
11.5.2 Shock-Drift (or First-Order Fermi) Acceleration	502
11.5.3 Diffusive Shock Acceleration	505
11.5.4 Shock Acceleration in Coronal Flare Sites	509
11.5.5 Shock Acceleration in CMEs and Type II Bursts	512
11.6 Summary	515
12 Particle Kinematics	517
12.1 Overview on Particle Kinematics	518
12.2 Kinematics of Free-Streaming Particles	520
12.2.1 Definition of Time-of-Flight Distance	520
12.2.2 Time-of-Flight Measurements	522
12.3 Kinematics of Particle Acceleration	524
12.3.1 Stochastic Acceleration	525
12.3.2 Electric DC Field Acceleration	526
12.4 Kinematics of Particle Injection	529

12.4.1	Scenarios of Synchronized Injection	529
12.4.2	Model of Particle Injection During Magnetic Reconnection . .	531
12.5	Kinematics of Particle Trapping	537
12.5.1	Magnetic Mirroring	537
12.5.2	Bifurcation of Trapping and Precipitation	539
12.5.3	Trapping Times	541
12.6	Kinematics of Particle Precipitation	543
12.6.1	Symmetric Traps	543
12.6.2	Asymmetric Traps	544
12.6.3	Collisional Limit	548
12.7	Summary	549
13	Hard X-Rays	551
13.1	Hard X-ray Instruments	552
13.1.1	SMM – HXRBS, GRS, HXIS	552
13.1.2	Yohkoh – HXT	553
13.1.3	CGRO – BATSE	554
13.1.4	RHESSI	555
13.2	Bremsstrahlung	556
13.2.1	Bremsstrahlung Cross Sections	556
13.2.2	Thick-Target Bremsstrahlung	558
13.2.3	Thin-Target Bremsstrahlung	561
13.3	Hard X-ray Spectra	562
13.3.1	Thermal-Nonthermal Spectra	562
13.3.2	Soft-Hard-Soft Spectral Evolution	565
13.3.3	Low-Energy and High-Energy Cutoffs	566
13.3.4	Spectral Inversion	567
13.4	Hard X-ray Time Structures	568
13.4.1	Pulse Observations	568
13.4.2	Distribution of Pulse Durations	569
13.4.3	Scaling of Pulse Duration with Loop Size	571
13.5	Hard X-Ray Time Delays	574
13.5.1	Time-of-Flight Delays	574
13.5.2	Scaling of TOF Distance with Loop Size	578
13.5.3	Conjugate Footpoint Delays	583
13.5.4	Trapping Time Delays	585
13.5.5	Thermal-Nonthermal Delays (Neupert Effect)	587
13.6	Hard X-ray Spatial Structures	589
13.6.1	Footpoint and Loop Sources	590
13.6.2	Footpoint Ribbons	596
13.6.3	Above-the-Looptop (Masuda) Sources	600
13.6.4	Occulted Flares	602
13.7	Hard X-Ray Statistics	603
13.7.1	Flare Statistics of Nonthermal Energies	603
13.7.2	Flare Statistics During Solar Cycles	604
13.8	Summary	606

14 Gamma-Rays	607
14.1 Overview on Gamma-Ray Emission Mechanisms	608
14.2 Electron Bremsstrahlung Continuum	611
14.2.1 Electron-Dominated Flares	613
14.2.2 Maximum Acceleration Energy	613
14.2.3 Long-Term Trapping Sources	614
14.3 Nuclear De-excitation Lines	618
14.3.1 Gamma-Ray Line Spectroscopy	618
14.3.2 Ion-Electron Ratios	620
14.3.3 Ion-Electron Timing	622
14.3.4 Directivity and Pitch Angle Distributions	624
14.3.5 Gamma-Ray Line Emission in Occulted Flares	627
14.3.6 Abundances of Accelerated Ions	628
14.4 Neutron Capture Line	629
14.5 Positron Annihilation Line	631
14.6 Pion Decay Radiation	634
14.7 Summary	635
15 Radio Emission	637
15.1 Overview on Radio Emission Mechanisms	638
15.2 Free-Free Emission (Bremsstrahlung)	640
15.2.1 Theory of Bremsstrahlung in Microwaves	640
15.2.2 Radio Observations of Free-Free Emission	642
15.3 Incoherent Gyroemission	644
15.3.1 Theory of Gyrosynchrotron Emission	644
15.3.2 Radio Observations of Gyrosynchrotron Emission	645
15.4 Plasma Emission	651
15.4.1 Electron Beams	651
15.4.2 Langmuir Waves	655
15.4.3 Observations of Plasma Emission	657
Metric Type III, J, U, and RS Bursts	657
Other Metric and Decimetric Bursts	661
15.5 Losscone Emission	664
15.5.1 Electron Cyclotron Maser Emission	664
15.5.2 Decimetric Observations	667
15.6 Summary	669
16 Flare Plasma Dynamics	671
16.1 Coronal Flare Plasma Heating	672
16.1.1 Resistive or Joule Heating	672
16.1.2 Anomalous Resistivity	673
16.1.3 Shock Heating	674
16.1.4 Electron Beam Heating	675
16.1.5 Proton Beam Heating	675
16.1.6 Inductive Current Heating	676
16.2 Chromospheric Flare Plasma Heating	676

16.2.1	Electron and Proton Precipitation—Driven Heating	676
16.2.2	Heat Conduction-Driven Heating	679
16.2.3	H α Emission	681
16.2.4	White-Light Emission	683
16.2.5	UV Emission	683
16.3	Chromospheric Evaporation	685
16.3.1	Hydrodynamic Simulations of Chromospheric Evaporation	687
16.3.2	Line Observations of Chromospheric Evaporation	689
16.3.3	Imaging Observations of Chromospheric Evaporation	691
16.3.4	Radio Emission and Chromospheric Evaporation	693
16.4	Postflare Loop Cooling	695
16.4.1	Cooling Delays of Flux Peaks	695
16.4.2	Differential Emission Measure Evolution	697
16.4.3	Conductive Cooling	699
16.4.4	Radiative Cooling	700
16.5	Summary	702
17	Coronal Mass Ejections (CMEs)	703
17.1	Theoretical Concepts of CMEs	704
17.1.1	Thermal Blast Model	704
17.1.2	Dynamo Model	704
17.1.3	Mass Loading Model	706
17.1.4	Tether Release Model	706
17.1.5	Tether Straining Model	707
17.2	Numerical MHD Simulations of CMEs	707
17.2.1	Analytical Models of CMEs	708
17.2.2	Numerical MHD Simulations of CMEs	708
17.3	Pre-CME Conditions	711
17.3.1	Photospheric Shear Motion	711
17.3.2	Kink Instability of Twisted Structures	713
17.4	Geometry of CMEs	714
17.5	Density and Temperature of CMEs	718
17.5.1	Density Measurements of CMEs	718
17.5.2	Temperature Range of CMEs	720
17.6	Velocities and Acceleration of CMEs	721
17.7	Energetics of CMEs	724
17.8	Coronal Dimming	727
17.9	Interplanetary CME Propagation	731
17.9.1	Interplanetary Magnetic Field (IMF)	731
17.9.2	Solar Wind	733
17.9.3	Interplanetary Shocks	734
17.9.4	Solar Energetic Particles (SEP)	735
17.9.5	Interplanetary Radio Bursts	736
17.10	Summary	737
	Problems	739

Solutions	759
Appendices	789
Appendix A: Physical Constants	789
Appendix B: Conversion of Physical Units	790
Appendix C: Maxwell's Equations in Different Physical Unit Systems	790
Appendix D: Plasma Parameters	791
Appendix E: Conversion Table of Electron Temperatures into Relativistic Parameters	792
Appendix F: EUV Spectral Lines	793
Appendix G: Vector Identities	794
Appendix H: Integral Identities	795
Appendix I: Components of Vector Operators	796
Notation	797
Physical Units Symbols	797
Latin Symbols	797
Greek Symbols	802
Acronyms	805
