

Thomas Bräunl

EMBEDDED ROBOTICS

Mobile Robot Design
and Applications
with Embedded Systems

Second Edition

With 233 Figures and 24 Tables

 Springer

CONTENTS

.....

PART I: EMBEDDED SYSTEMS

1	Robots and Controllers	3
1.1	Mobile Robots	4
1.2	Embedded Controllers	7
1.3	Interfaces	10
1.4	Operating System	13
1.5	References	15
2	Sensors	17
2.1	Sensor Categories	18
2.2	Binary Sensor	19
2.3	Analog versus Digital Sensors	19
2.4	Shaft Encoder	20
2.5	A/D Converter	22
2.6	Position Sensitive Device	23
2.7	Compass	25
2.8	Gyroscope, Accelerometer, Inclinator	27
2.9	Digital Camera	30
2.10	References	38
3	Actuators	41
3.1	DC Motors	41
3.2	H-Bridge	44
3.3	Pulse Width Modulation	46
3.4	Stepper Motors	48
3.5	Servos	49
3.6	References	50
4	Control	51
4.1	On-Off Control	51
4.2	PID Control	56
4.3	Velocity Control and Position Control	62
4.4	Multiple Motors – Driving Straight	63
4.5	V-Omega Interface	66
4.6	References	68

5	Multitasking	69
5.1	Cooperative Multitasking	69
5.2	Preemptive Multitasking	71
5.3	Synchronization	73
5.4	Scheduling	77
5.5	Interrupts and Timer-Activated Tasks	80
5.6	References	82
6	Wireless Communication	83
6.1	Communication Model	84
6.2	Messages	86
6.3	Fault-Tolerant Self-Configuration	87
6.4	User Interface and Remote Control	89
6.5	Sample Application Program	92
6.6	References	93

PART II: MOBILE ROBOT DESIGN

7	Driving Robots	97
7.1	Single Wheel Drive	97
7.2	Differential Drive	98
7.3	Tracked Robots	102
7.4	Synchro-Drive	103
7.5	Ackermann Steering	105
7.6	Drive Kinematics	107
7.7	References	111
8	Omni-Directional Robots	113
8.1	Mecanum Wheels	113
8.2	Omni-Directional Drive	115
8.3	Kinematics	117
8.4	Omni-Directional Robot Design	118
8.5	Driving Program	119
8.6	References	120
9	Balancing Robots	123
9.1	Simulation	123
9.2	Inverted Pendulum Robot	124
9.3	Double Inverted Pendulum	128
9.4	References	129
10	Walking Robots	131
10.1	Six-Legged Robot Design	131
10.2	Biped Robot Design	134
10.3	Sensors for Walking Robots	139
10.4	Static Balance	140

10.5	Dynamic Balance.....	143
10.6	References	148
11	Autonomous Planes	151
11.1	Application	151
11.2	Control System and Sensors	154
11.3	Flight Program	155
11.4	References	159
12	Autonomous Vessels and Underwater Vehicles	161
12.1	Application	161
12.2	Dynamic Model	163
12.3	AUV Design Mako	163
12.4	AUV Design USAL.....	167
12.5	References	170
13	Simulation Systems	171
13.1	Mobile Robot Simulation	171
13.2	EyeSim Simulation System	172
13.3	Multiple Robot Simulation	177
13.4	EyeSim Application.....	178
13.5	EyeSim Environment and Parameter Files	179
13.6	SubSim Simulation System	184
13.7	Actuator and Sensor Models	186
13.8	SubSim Application.....	188
13.9	SubSim Environment and Parameter Files	190
13.10	References	193

PART III: MOBILE ROBOT APPLICATIONS

14	Localization and Navigation	197
14.1	Localization	197
14.2	Probabilistic Localization	201
14.3	Coordinate Systems	205
14.4	Dijkstra's Algorithm	206
14.5	A* Algorithm.....	210
14.6	Potential Field Method	211
14.7	Wandering Standpoint Algorithm	212
14.8	DistBug Algorithm	213
14.9	References	215
15	Maze Exploration	217
15.1	Micro Mouse Contest	217
15.2	Maze Exploration Algorithms	219
15.3	Simulated versus Real Maze Program.....	226
15.4	References	228

16 Map Generation	229
16.1 Mapping Algorithm	229
16.2 Data Representation	231
16.3 Boundary-Following Algorithm	232
16.4 Algorithm Execution	233
16.5 Simulation Experiments	235
16.6 Robot Experiments	236
16.7 Results	239
16.8 References	240
17 Real-Time Image Processing	243
17.1 Camera Interface	243
17.2 Auto-Brightness	245
17.3 Edge Detection	246
17.4 Motion Detection	248
17.5 Color Space	249
17.6 Color Object Detection	251
17.7 Image Segmentation	256
17.8 Image Coordinates versus World Coordinates	258
17.9 References	260
18 Robot Soccer	263
18.1 RoboCup and FIRA Competitions	263
18.2 Team Structure	266
18.3 Mechanics and Actuators	267
18.4 Sensing	267
18.5 Image Processing	269
18.6 Trajectory Planning	271
18.7 References	276
19 Neural Networks	277
19.1 Neural Network Principles	277
19.2 Feed-Forward Networks	278
19.3 Backpropagation	283
19.4 Neural Network Example	288
19.5 Neural Controller	289
19.6 References	290
20 Genetic Algorithms	291
20.1 Genetic Algorithm Principles	292
20.2 Genetic Operators	294
20.3 Applications to Robot Control	296
20.4 Example Evolution	297
20.5 Implementation of Genetic Algorithms	301
20.6 References	304

Contents

21 Genetic Programming 307

21.1 Concepts and Applications 307

21.2 Lisp 309

21.3 Genetic Operators 313

21.4 Evolution 315

21.5 Tracking Problem 316

21.6 Evolution of Tracking Behavior 319

21.7 References 323

22 Behavior-Based Systems 325

22.1 Software Architecture 325

22.2 Behavior-Based Robotics 326

22.3 Behavior-Based Applications 329

22.4 Behavior Framework 330

22.5 Adaptive Controller 333

22.6 Tracking Problem 337

22.7 Neural Network Controller 338

22.8 Experiments 340

22.9 References 342

23 Evolution of Walking Gaits 345

23.1 Splines 345

23.2 Control Algorithm 346

23.3 Incorporating Feedback 348

23.4 Controller Evolution 349

23.5 Controller Assessment 351

23.6 Evolved Gaits 352

23.7 References 355

24 Outlook 357

APPENDICES

A Programming Tools 361

B RoBIOS Operating System 371

C Hardware Description Table 413

D Hardware Specification 429

E Laboratories 437

F Solutions 447

Index 451
