Contents

1	Tra	ansport in Freight Carrier Networks	1		
	1.1	Recent Trends in Freight Transportation			
	1.2	Carrier Transport Networks			
	1.3	Network Design, Configuration and Deployment.			
	1.4	Distribution and Collection Planning.			
	1.5	Aims of this Book and Used Methods			
2	Operational Freight Transport Planning				
	2.1	Decision Problems	16		
		2.1.1 Request Acceptance	16		
		2.1.2 Mode Selection	17		
		2.1.3 Routing	19		
		2.1.4 Freight Optimization	20		
	2.2	Hierarchical and Simultaneous Planning.	22		
		2.2.1 Hierarchical Approach	22		
		2.2.2 Simultaneous Routing and Freight Optimization	23		
	2.3	Generic Models for Simultaneous Problems	24		
		2.3.1 Maximal-Profit Selection	25		
		2.3.2 Bottleneck Selection.	25		
		2.3.3 Selection with Compulsory Requests	26		
		2.3.4 Selection with Postponement.	27		
	2.4	Conclusions.	29		
3	Pic	ckup and Delivery Selection Problems	31		
	3.1	Problems with Pickup and Delivery Requests.	31		
		3.1.1 Problems with Depot-Connected Requests	33		
		3.1.2 Problems with Direct Delivery Requests	33		
		3.1.3 Simultaneous Problems	34		
	3.2	Pickup and Delivery Paths and Schedules	34		
	3.3	Optimization Problem	36		
	34	Problem Variants	37		

VI	II (Contents	
		3.4.1 The PDSP with LSP Incorporation	38
		3.4.2 The Capacitated PDSP	39
		3.4.3 The PDSP with Compulsory Requests	
		3.4.4 The PDSP with Postponement	
	3.5	Test Case Generation	
		3.5.1 Generation of Pickup and Delivery Requests	
		3.5.2 Freight Tariff	
		3.5.3 Benchmark Suites	
	3.6	Conclusions.	48
4	Me	metic Algorithms	
	4.1	Algorithmic Solving of Problems with PD-Requests.	
	4.2	Evolutionary Algorithms.	
	4.3	Genetic Algorithms.	
		4.3.1 Terminus Technici	
		4.3.2 General Framework.	
		4.3.3 Applicability of Genetic Search	
		4.3.4 Limits of the Genetic Search	
	4.4	Repairing and Improving the Genetic Code	
	4.5	Conclusions	.64
5		metic Algorithm Vehicle Routing	
	5.1	Genetic Sequencing	
	5.2	Genetic Clustering	
	5.3	Combined Genetic Sequencing and Clustering.	
	5.4	Advanced MA-Approaches: The State-of-the-Art	
		5.4.1 Multi-Chromosome Memetic Algorithms.	
		5.4.2 Co-Evolution with Specialization.	
	~ ~	5.4.3 Co-Evolution of Partial Solutions.	
	5.5	Conclusions	/6
6	Me	metic Search for Optimal PD-Schedules	
	6.1	Permutation-Controlled Schedule Construction.	78

Construction of Routes for more than one Vehicle 78

Determination of the Request Instantiation Order 84

Mutation 90 Population Model 92

Representation of a PD-Schedule 84
Configuration of the Memetic Algorithm 85
6.3.1 Initial Population 85

6.1.2

6.1.3

6.3.2

6.3.3

6.3.4

6.2

		6.4.2 Impacts of Spatial Distribution and Time Window		
		Tightness	97	
		6.4.3 Identification of Profit-Maximum Request Selections		
		6.4.4 Consideration of Capacity Limitations		
		6.4.5 Identification of Deferrable Requests		
	6.5	Conclusions	.113	
7	Coping with Compulsory Requests		.115	
	7.1	Limits of Fitness Penalization		
		7.1.1 Static Penalties		
		7.1.2 Dynamically Determined Penalties		
		7.1.3 Adaptive Penalization		
	7.2	A Double-Ranking Approach		
	7.3	Converging-Constraint Approach.		
		7.3.1 Alternating and Converging Constraints		
		7.3.2 ACC-Algorithm Control		
	7.4	Assessing QC-MA and ACC-MA: Numerical Results		
		7.4.1 Experimental Setup		
		7.4.2 Numerical Results.		
		7.4.3 Impacts of Intermediate Cost Reductions: An Example .		
	7.5	Conclusions	.133	
8	Request Selection and Collaborative Planning			
	8.1	The Portfolio Re-composition Problem		
		8.1.1 Literature Review.		
		8.1.2 Formal Problem Statement.		
	8.2	Configuration of the Groupage System		
		8.2.1 Bundle Specification by the Carriers		
		8.2.2 Bundle Assignment by the Mediator		
	8.3	Computational Experiments.		
		8.3.1 Test Cases		
		8.3.2 Collaborative Planning Approach	142	
		8.3.3 Reference Approach		
		8.3.4 Results	.143	
	8.4	Conclusions	147	
9	Conclusions			
	9.1	Understanding Freight Carrier Decision Problems.	.149	
	9.2	Model Building	.150	
	9.3	Methodological. Enhancements
