

Table of Contents

Introduction.....	1
1 Quantification and Calculation in Nature	7
1.1 Why and How has Arithmetic Cognition Evolved?	7
1.2 The Numerical Competence of Animals	9
1.3 The Numerical Competence of Human Infants.....	13
1.4 A Brief Account from Neuroscience	16
1.5 Stand Up and Count (and Get Smarter!).....	18
2 The Cells of the Brain.....	21
2.1 Molecular Neurobiology.....	21
2.2 Fuzzy Formal Languages.....	27
2.3 Ambiguity.....	30
2.4 The Hierarchy of Fuzzy Grammars	36
2.5 Fuzzy Languages, Distributed Processing and Biological Diversity	41
2.6 Knowledge Adaptation and Evolution	43
2.7 Self-Controlled Expression.....	46
2.8 Speeding up Brain Processing.....	47
2.9 The Chemical Talk at the Synapse	50
2.10 Summary.....	52
3 Brain: A Distributed Intelligent Processing System.....	53
3.1 Distributed Intelligent Processing Systems	53
3.2 Distributed Processed Languages.....	55
3.3 The Nervous System.....	59
3.4 The Brain	60
3.5 Brain Communication Channels	64
3.6 The Basics of DIPS Learning.....	66
3.7 Evolutionary Learning.....	70
3.8 Summary.....	77
4 Neural Computational Mechanisms Supporting Cognitive Processes	79
4.1 Basic Concepts of Quantum Computation	79

4.2 Cellular Processing	82
4.3 Current Physical Implementations of Quantum Computers	86
4.4 The Dendritic Spine as a Quantum Computing Device.....	89
5 The Brain and Quantum Computation.....	93
5.1 The Dendritic Spine as an Ion Trap Quantum Computing Device.	93
5.2 The Deutsch-Josza Algorithm	96
5.3 The Quantum Cortical Recognition Device.....	100
5.3.1 The Model.....	100
5.3.2 Learning	104
5.3.3. Recognizing Faces.....	105
5.4 Fuzzy Logic and Conflict in $O(G H, S_b)$	106
5.5 Recurrent Architecture Generates Entanglement Supporting Consciousness.....	109
5.6 Superdense Codes.....	113
5.7 Quantum Computing and Working Memory	114
6 Memetics and Cognitive Mathematics	117
6.1 Memes.....	117
6.2 The Formal Meme	119
6.3 Improving Meme Spread.....	120
6.4 Memetic Channels and the Brain.....	122
6.5 The Evolution of our Mathematical Competence.....	123
6.6 How Memes Spread.....	126
6.7 How the Number Meme Spread.....	131
6.8 Future Perspectives in the Memetics of Cognitive Mathematics .	132
7 Modeling of Arithmetic Reasoning	135
7.1 Counting.....	135
7.2 A Model for Number Sense.....	136
7.2.1 Identifying numerosities	137
7.2.2 Quantification trajectory control.....	140
7.3 The Crisp Numbers.....	141
7.5 Doing Arithmetic	145
7.6 The Evolution of Arithmetic Knowledge	149
7.7 Representation of Other Abstract Entities	151
8 Brain Maps of Arithmetic Processes in Children and Adults	153
8.1 The Study of the Mathematical Brain	153
8.2 The Technique	155
8.2.1 Theory.....	155
8.2.2 The Methods	157

8.3 Agent Commitment Experimentally Measured.....	162
8.3.1 Males are Faster than Females in Arithmetic Calculations ...	164
8.3.2 Size Number Effect.....	169
8.4 The Distributed Mathematical Brain	170
8.5 Building the Distributed Mathematical Brain	175
8.6 Conclusion	177
9 Arithmetic Learning Capability in Congenitally Injured Brains ..	179
9.1 Dyscalculia	179
9.2 Damaged Brains	180
9.3 Neural Plasticity	191
9.4 Developmental Dyscalculia	192
9.5 Conclusion	197
10 Learning Arithmetic: Why So Difficult?.....	199
10.1 The Nature of Arithmetic Knowledge	199
10.2 The Invention of Crisp Numbers	202
10.3 Learning by Observing	203
10.4 Arithmetic Meme Diffusion in School.....	206
10.5 Evolving Arithmetic Knowledge in the School.....	209
References.....	213
Index.....	225
