

H. Adachi · T. Mukoyama · J. Kawai (Eds.)

Hartree-Fock-Slater Method for Materials Science

The DV- $X\alpha$ Method for Design
and Characterization of Materials

With 132 Figures and 33 Tables

 Springer

Contents

Part I Fundamental

1 DV- $X\alpha$ Method and Molecular Structure

<i>H. Adachi</i>	3
1.1 Molecular Orbital Theory	3
1.2 Discrete Variational (DV) $X\alpha$ Molecular Orbital Method	5
1.3 Molecular Orbital Calculation of H_2	10
1.4 Covalency and Ionicity	13
1.5 DV- $X\alpha$ Molecular Orbital Calculation for CO Molecule	15
References	20

Part II Materials Science

2 Alloy Design Based on the DV- $X\alpha$ Cluster Method

<i>M. Morinaga, Y. Murata, H. Yukawa</i>	23
2.1 Introduction	23
2.2 DV- $X\alpha$ Molecular Orbital Method	24
2.3 Alloying Parameters	25
2.3.1 d -Orbital Energy Level, Md	25
2.3.2 Bond Order, Bo	26
2.3.3 Average Parameter Values for Typical Alloys	27
2.4 Estimation of Alloy Properties Using Alloying Parameters	29
2.4.1 Nickel Alloys	29
New PHACOMP Method	30
Alloying Vector	30
Target Region for Alloy Design	32
Alloy Modification Using the $\overline{Bo}-\overline{Md}$ Diagram	32

2.4.2	High-Cr Ferritic Steels	33
	Alloying Vector	33
	δ Ferrite Formation	34
	Evolution of Ferritic Steels	34
2.5	Design of Structural Alloys	36
2.5.1	Nickel-Based Single-Crystal Superalloys	36
2.5.2	High-Cr Ferritic Steels	36
2.6	Crystal Structure Maps for Intermetallic Compounds	37
2.7	Hydrogen Storage Alloys	37
2.7.1	Metal-hydrogen Interaction	38
2.7.2	Roles of Hydride-Forming and Non-Forming Elements	40
2.7.3	Criteria for Alloy Design	41
	Alloy Cluster Suitable for Hydrogen Storage	41
	Alloy Compositions	42
	Mg-Based Alloys	43
2.8	Proton-Conducting Perovskite-type Oxides	44
2.9	Conclusion.....	46
	References	46

3 Chemical Bonding Around Lattice Imperfections in 3d-Transition Metal Compounds

<i>M. Mizuno</i>	49
3.1 Introduction	49
3.2 Computational Method	50
3.3 Effect of Solute Atoms on the Chemical Bonding of Fe ₃ C	51
3.3.1 Crystal Structure and Cluster Models for Fe ₃ C with Solute Atoms	51
3.3.2 Pure Fe ₃ C	54
3.3.3 Fe ₃ C with Solute Atoms	55
3.3.4 Effect of Solute Atoms on Fe ₃ C	57
3.3.5 Effect of Solute Atoms in Other Transition Metal Carbides	60
3.4 Chemical Bonding at the Fe/TiX (X = C, N, or O) Interfaces	65
3.4.1 Model Clusters for the Fe/TiX Interfaces	66
3.4.2 1 Bulk TiC, TiN, and TiO	68
3.4.3 Preferred Position of Fe Atoms at the Fe/TiC Interface	70
3.4.4 Analysis of the Chemical Bonding at the Fe/TiC, Fe/TiN, and Fe/TiO Interfaces	72
3.4.5 Other Interfaces	76
3.5 Conclusions	81
References	82

4 Ceramics

<i>T. Kamiya, N. Ohashi, J. Tanaka</i>	85
4.1 General Introduction	85

4.2	Characterization of Ceramics with the Assistance of DV- $X\alpha$ Calculations	87
4.2.1	Assignments for Electron Spectroscopy	88
	Introduction	88
	Calculation	91
	Results	92
	Remarks	92
4.2.2	Prediction of Atomic Arrangements	93
	Introduction	93
4.2.3	Theory and Calculation	94
4.3	Results	96
	Remarks	97
4.3.1	Assignments for the ESR Spectra Using Electron Density Calculations by DV- $X\alpha$	98
	Introduction	98
	Theory and Calculation	98
4.3.2	Results	100
4.4	Property and Structure Predictions for Ceramics Using DV- $X\alpha$...	102
4.4.1	Calculation of Structural and Dielectric Properties of Inorganic Crystals Using DV- $X\alpha$ Basis Functions	103
	Introduction	103
	Calculation	104
	Results	105
4.4.2	Tight-binding Approach Using the DV- $X\alpha$ Method	106
	Introduction	106
	Calculation	107
4.4.3	Results	108
4.4.4	Indirect Prediction of the Piezoelectric Property Change of $\text{Pb}(\text{Zr},\text{Ti})\text{O}_3$ Induced by the Addition of Impurities ...	112
	Introduction	112
	Calculation	113
	Results	114
4.5	Remarks	118
	References	118
5 Magnetic Properties		
	<i>K. Fukushima</i>	121
5.1	Introduction	121
5.2	Computational Method and Models	123
5.3	Results and Discussion	125
5.4	Conclusions	127
	References	127

6 Optical Materials

<i>K. Ogasawara, H. Adachi</i>	129
6.1 Introduction	129
6.1.1 Optical Materials Based on Transition-Metal Ions	129
6.1.2 Ligand-Field Theory	131
6.1.3 First-principle Calculation of Multiplets	132
6.1.4 DV-ME Method	133
6.2 DV-ME Method	133
6.2.1 Configuration Interaction	133
6.2.2 CDC Approach	135
6.2.3 Correlation Correction	136
6.2.4 Transition Probability	137
6.3 Calculation of the Absorption Spectrum of Ruby	138
6.3.1 Model Cluster	138
6.3.2 One-Electron Energy Level	138
6.3.3 Multiplet Energy Level	138
6.3.4 Absorption Spectra	139
6.4 Calculation of the Absorption Spectrum of $\text{Co}^{2+}:\text{ZnS}$	141
6.4.1 Model Cluster	141
6.4.2 One-Electron Energy Level	141
6.4.3 Multiplet Energy Level	141
6.4.4 Absorption Spectrum	142
6.5 Summary	143
References	144

7 Heavy Elements

<i>T. Ishii, M. Yamashita, R. Sekine, T. Enoki</i>	147
7.1 Introduction	147
7.2 Method of Calculation	148
7.3 Results and Discussion	150
References	159

Part III Spectroscopy**8 Radiative Transitions**

<i>T. Mukoyama</i>	163
8.1 Introduction	163
8.2 Transition Probability	165
8.3 Dipole Matrix Element	168
8.4 Molecular X-Ray Emission	171
8.5 Test for X-Ray Emission Rates	173
8.5.1 Validity of the DV Integration Method	173
8.5.2 Electronic Relaxation Effect	174
8.5.3 Contributions from Interatomic Transitions	177

8.6	Chemical Effect of the $K\beta/K\alpha$ Ratios for 3d Elements	178
8.7	Relation between $K\beta/K\alpha$ Ratios and the Number of 3d Electrons	182
8.8	Summary	186
	References	187

9 Response to the Creation of a Core Hole in Transition-Metal Compounds

<i>J. Kawai</i>	189
9.1 Core-hole Spectroscopic Techniques	189
9.2 Ionic Chemical Bond as a Perturbation of Atomic Structure	194
9.3 Covalent Bond Formation Due to a Core Hole	196
9.4 Charge Transfer Due to a Core Hole	197
9.5 Calculation Details	198
9.5.1 Cluster Size	198
9.5.2 Difference Between $1s\downarrow^{-1}$ and $1s\uparrow^{-1}$ Hole States	199
9.5.3 Difference Between $1s^{-1}$ and $2p^{-1}$ Hole States	200
9.5.4 Effect of Bond Length Difference	200
9.6 Charge-Transfer Effect	201
9.7 Concluding Remarks	204
References	205

10 Determining Electronic Structure from Auger Spectra in the Cluster Approximation

<i>L. Kövér</i>	209
10.1 Introduction	209
10.2 Effects of the Atomic Environment of Auger Spectra Excited from Solids	210
10.3 X-ray Excited Auger Spectroscopy for Studying Chemical and Solid State Effects on Auger Spectra	211
10.4 Local Charges in Binary Alloys	211
10.4.1 Experimental	213
10.4.2 Charge Transfer in CuPd Alloys	213
10.4.3 Charge Transfer in Al ₃ Ni and AlNi ₃ Alloys	214
10.5 Generalized Electrostatic Model for Interpreting Auger Parameter Shifts and Final State Relaxation/Polarization	217
10.6 Interpretation of K-Auger Satellite Structures in 3d Metals and in Fluorides, Using the MO Cluster Approach ..	219
10.6.1 <i>KLL</i> Auger Spectra of Metallic Cu and Ni: Calculation of the Satellite Main Line Energy Separation Using the DV-X α Cluster Molecular Orbital Model	219
10.6.2 F <i>KLL</i> Spectra in Fluorides: Determination of the Resonance Energy and Multiplet Structure Using DV-X α Cluster Molecular Orbital Calculations	222
10.7 Information on Local Electronic Structure and Correlation from Core-valence Auger Lineshapes	226

10.7.1	Local Electronic Structures in Phosphorus Oxyanions	227
10.7.2	Core-valence <i>K</i> -Auger Spectra of Metallic Al	227
10.7.3	Local Electronic Structure in Al-Ni Alloys	230
10.8	Summary	234
	References	234
	Index	237
