

Harald Ibach

Physics of Surfaces and Interfaces

With 350 Figures

 Springer

Contents

1	Structure of Surfaces.....	1
1.1	Surface Crystallography.....	2
1.1.1	Diffraction at Surfaces.....	2
1.1.2	Surface Superlattices.....	7
1.2	Structure of Surfaces.....	12
1.2.1	Face Centered Cubic (fcc) Structures.....	12
1.2.2	Body Centered Cubic (bcc) Structures.....	17
1.2.3	Diamond, Zincblende and Wurtzite.....	19
1.2.4	Surfaces with Adsorbates.....	30
1.3	Defects at Surfaces.....	32
1.3.1	Line Defects.....	33
1.3.2	Point Defects.....	46
1.4	Observation of Defects.....	51
1.4.1	Diffraction Techniques.....	51
1.4.2	Scanning Microprobes.....	55
1.5	The Structure of the Solid/Electrolyte Interface.....	58
2	Basic Techniques.....	63
2.1	Ex-Situ Preparation.....	63
2.1.1	The Making of Crystals.....	63
2.1.2	Preparing Single Crystal Surfaces.....	65
2.2	Surfaces in Ultra-High Vacuum.....	71
2.2.1	UHV-Technology.....	71
2.2.2	Surface Analysis.....	81
2.2.3	Sample Preparation in UHV.....	88
2.3	Surfaces in an Electrochemical Cell.....	95
2.3.1	The Three-Electrode Arrangement.....	95
2.3.2	Voltammograms.....	97
2.3.3	Preparation of Single Crystal Electrodes.....	101
3	Basic Concepts.....	103
3.1	Electronic States and Chemical Bonding in Bulk Solids.....	103
3.1.1	Metals.....	103
3.1.2	Semiconductors.....	106
3.1.3	From Covalent Bonding to Ions in Solutions.....	109

3.2	Charge Distribution at Surfaces and Interfaces	112
3.2.1	Metal Surfaces in the Jellium Approximation.....	112
3.2.2	Space Charge Layers at Semiconductor Interfaces.....	116
3.2.3	Charge at the Solid/Electrolyte Interface.....	121
3.3	Elasticity Theory	125
3.3.1	Strain, Stress and Elasticity.....	125
3.3.2	Elastic Energy in Strained Layers.....	129
3.3.3	Thin Film Stress and Bending of a Substrate.....	132
3.4	Elastic Interactions Between Defects	139
3.4.1	Outline of the Problem.....	139
3.4.2	Interaction Between Point and Line Defects	142
3.4.3	Pattern Formation via Elastic Interactions.....	144
4	Equilibrium Thermodynamics	149
4.1	The Hierarchy of Equilibria.....	149
4.2	Thermodynamics of Flat Surfaces and Interfaces.....	152
4.2.1	The Interface Free Energy.....	152
4.2.2	Surface Excesses	158
4.2.3	Charged Surfaces at Constant Potential.....	161
4.2.4	Maxwell Relations and Their Applications.....	164
4.2.5	Solid and Solid-Liquid Interfaces	168
4.3	Curved Surfaces and Surface Defects.....	172
4.3.1	Equilibrium Shape of a Three-Dimensional Crystal	172
4.3.2	Rough Surfaces	180
4.3.3	Step Line Tension and Stiffness	184
4.3.4	Point Defects.....	187
4.3.5	Steps on Charged Surfaces.....	188
4.3.6	Point Defect on Charged Surfaces	194
4.3.7	Equilibrium Fluctuations of Line Defects and Surfaces.....	196
4.3.8	Islands Shape Fluctuations.....	201
5	Statistical Thermodynamics of Surfaces	207
5.1	General Concepts.....	207
5.1.1	Internal Energy and Free Energy.....	207
5.1.2	Application to the Ideal Gas	208
5.1.3	The Vapor Pressure of Solids	210
5.2	The Terrace-Step-Kink Model	211
5.2.1	Basic Assumptions and Properties	211
5.2.2	Step-Step Interactions on Vicinal Surfaces	215
5.2.3	Simple Solutions for the Problem of Interacting Steps	218
5.2.4	Models for Thermal Roughening.....	221
5.2.5	Phonon Entropy of Steps	223
5.3	The Ising-Model	225
5.3.1	Application to the Equilibrium Shape of Islands.....	225
5.3.2	Further Properties of the Model.....	228

5.4.	Lattice Gas Models.....	233
5.4.1	Lattice Gas with No Interactions.....	233
5.4.2	Lattice Gas or Real 2D-Gas?	235
5.4.3	Segregation	238
5.4.4	Phase Transitions in the Lattice Gas Model	240
6	Adsorption	245
6.1	Physisorption and Chemisorption – General Issues.....	245
6.2	Isotherms, Isosters, and Isobars	254
6.2.1	The Langmuir Isotherm	254
6.2.2	Lattice Gas with Mean Field Interaction – the Fowler-Frumkin Isotherm	255
6.2.3	Experimental Determination of the Heat of Adsorption ...	260
6.2.4	Underpotential Deposition	264
6.2.5	Specific Adsorption of Ions.....	269
6.3	Desorption	273
6.3.1	Desorption Spectroscopy	273
6.3.2	Theory of Desorption Rates	276
6.4	The Chemical Bond of Adsorbates	284
6.4.1	Carbon Monoxide (CO).....	284
6.4.2	Nitric Oxide.....	287
6.4.3	The Oxygen Molecule.....	288
6.4.4	Water.....	289
6.4.5	Hydrocarbons.....	291
6.4.6	Alkali Metals.....	295
6.4.7	Hydrogen.....	300
6.4.8	Group IV-VII Atoms	303
7	Vibrational Excitations at Surfaces	309
7.1	Surface Phonons of Solids.....	309
7.1.1	General Aspects	309
7.1.2	Surface Lattice Dynamics	312
7.1.3	Surface Stress and the Nearest Neighbor Central Force Model	315
7.1.4	Surface Phonons in the Acoustic Limit	317
7.1.5	Surface Phonons and Ab-Initio Theory	319
7.1.6	Kohn Anomalies.....	321
7.1.7	Dielectric Surface Waves.....	323
7.2	Adsorbate Modes	327
7.2.1	Dispersion of Adsorbate Modes	327
7.2.2	Localized Modes.....	330
7.2.3	Selection Rules.....	333
7.3	Inelastic Scattering of Helium Atoms.....	339
7.3.1	Experiment	339
7.3.2	Theoretical Background.....	342

7.4	Inelastic Scattering of Electrons.....	347
7.4.1	Experiment.....	347
7.4.2	Theory of Inelastic Electron Scattering	351
7.5	Optical Techniques	362
7.5.1	Reflection Absorption Infrared Spectroscopy	362
7.5.2	Beyond the Surface Selection Rule.....	366
7.5.3	Special Optical Techniques.....	369
7.6	Tunneling Spectroscopy	373
8	Electronic Properties.....	379
8.1	Surface Plasmons.....	379
8.1.1	Surface Plasmons in the Continuum Limit.....	379
8.1.2	Surface Plasmon Dispersion and Multipole Excitations ...	381
8.2	Electron States at Surfaces	383
8.2.1	General Issues.....	383
8.2.2	Probing Occupied States – Photoemission Spectroscopy...	386
8.2.3	Probing Unoccupied States	391
8.2.4	Surface States on Semiconductors	394
8.2.5	Surface States on Metals	401
8.2.6	Band Structure of Adsorbates.....	407
8.2.7	Core Level Spectroscopy	410
8.3	Quantum Size Effects	413
8.3.1	Thin Films	413
8.3.2	Oscillations in the Total Energy of Thin Films	417
8.3.3	Confinement of Surface States by Defects	420
8.3.4	Oscillatory Interactions between Adatoms	425
8.4	Electronic Transport	427
8.4.1	Conduction in Thin Films – the Effect of Adsorbates	427
8.4.2	Conduction in Thin Films – the Solution of the Boltzmann Equation	431
8.4.3	Conduction in Space Charge Layers	435
8.4.4	From Nanowires to Quantum Conduction	437
9	Magnetism.....	445
9.1	Magnetism of Bulk Solids.....	445
9.1.1	General Issues	445
9.1.2	Magnetic Anisotropy of Various Crystal Structures.....	447
9.2	Magnetism of Surfaces and Thin Film Systems.....	451
9.2.1	Experimental Methods.....	451
9.2.2	Magnetic Anisotropy in Thin Film Systems.....	455
9.2.3	Curie Temperature of Low Dimensional Systems	459
9.2.4	Temperature Dependence of the Magnetization	463
9.3	Domain Walls.....	467
9.3.1	Bloch and Néel Walls	467
9.3.2	Domain Walls in Thin Films	468
9.3.3	The Internal Structure of Domain Walls in Thin Films	470

9.4	Magnetic Coupling in Thin Film Systems	473
9.4.1	Exchange Bias	473
9.4.2	The GMR Effect	476
9.4.3	Magnetic Coupling Across Nonmagnetic Interlayers	479
9.5	Magnetic Excitations	482
9.5.1	Stoner Excitations and Spin Waves	482
9.5.2	Magnetostatic Spin Waves at Surfaces and in Thin Films..	485
9.5.3	Exchange-Coupled Surface Spin Waves	486
10	Diffusion at Surfaces	491
10.1.	Stochastic Motion	491
10.1.1	Observation of Single Atom Diffusion Events	491
10.1.2	Statistics of Random Walk.....	495
10.1.3	Absolute Rate Theory	498
10.1.4	Calculation of the Prefactor.....	500
10.1.5	Cluster and Island Diffusion	503
10.2	Continuum Theory of Diffusion.....	505
10.2.1	Transition from Stochastic Motion to Continuum Theory..	505
10.2.2	Smoothing of a Rough Surface.....	508
10.2.3	Decay of Protrusions in Steps and Equilibration of Islands after Coalescence.....	511
10.2.4	Asaro-Tiller-Grinfeld Instability and Crack Propagation...	514
10.3	The Ehrlich-Schwoebel Barrier	518
10.3.1	The Concept of the Ehrlich-Schwoebel Barrier	518
10.3.2	Mass Transport on Stepped Surfaces	520
10.3.3	The Kink Ehrlich-Schwoebel Barrier	522
10.3.4	The Atomistic Picture of the Ehrlich-Schwoebel Barrier ..	523
10.4	Ripening Processes in Well-Defined Geometries	525
10.4.1	Ostwald Ripening in Two-Dimensions	525
10.4.2	Attachment/Detachment Limited Decay	530
10.4.3	Diffusion Limited Decay	532
10.4.4	Extension to Noncircular Geometries	535
10.4.5	Interlayer Transport in Stacks of Islands	536
10.4.6	Atomic Landslides.....	538
10.4.7	Ripening at the Solid/Electrolyte Interface.....	540
10.5	The Time Dependence of Step Fluctuations	542
10.5.1	The Basic Phenomenon	542
10.5.2	Scaling Laws for Step Fluctuations	544
10.5.3	Experiments on Step Fluctuations	550
11	Nucleation and Growth	555
11.1.	Nucleation under Controlled Flux	556
11.1.1	Nucleation	556
11.1.2	Growth Without Diffusion.....	561
11.1.3	Growth with Hindered Interlayer Transport.....	565
11.1.4	Growth with Facile Interlayer Transport	567

11.2 Nucleation and Growth under Chemical Potential Control	572
11.2.1 Two-Dimensional Nucleation	572
11.2.2 Two-Dimensional Nucleation in Heteroepitaxy	574
11.2.3 Three-Dimensional Nucleation	576
11.2.4 Theory of Nucleation Rates	580
11.2.5 Rates for 2D- and 3D-Nucleation	587
11.2.6 Nucleation Experiments at Solid Electrodes	593
11.3 Nucleation and Growth in Strained Systems.....	597
11.3.1 2D-Nucleation on Strained Layers.....	597
11.3.2 3D-nucleation on Strained Layers	600
11.4 Nucleation-Free Growth.....	603
11.4.1 The Steady State Concentration Profile	603
11.4.2 Step Flow Growth	605
11.4.3 Meander Instability of Steps	607
Appendix: Surface Brillouin Zones.....	613
