

Table of Contents

Part I Complex Structured Condensed Matter

Spatial Statistics and Micromechanics of Materials	
<i>Dominique Jeulin</i>	3
Characterising the Morphology of Disordered Materials	
<i>Christoph H. Arns, Mark A. Knackstedt, Klaus R. Mecke</i>	37
Topological Characterization of Porous Media	
<i>Hans-Jörg Vogel</i>	75
Nanotomography: Real-Space Volume Imaging with Scanning Probe Microscopy	
<i>Robert Magerle</i>	93
Bicontinuous Surfaces in Self-assembling Amphiphilic Systems	
<i>Ulrich Schwarz, Gerhard Gompper</i>	107
Morphology of Langmuir Monolayer Phases	
<i>Mathias Lösche and Peter Krüger</i>	152
Spatial Order in Liquid Crystals: Computer Simulations of Systems of Ellipsoids	
<i>Friederike Schmid, Nguyen H. Phuong</i>	172
Two-Dimensional Fluid Foams at Equilibrium	
<i>François Graner</i>	187

Part II Spatial Statistics and Morphology

Morphological Texture Analysis: An Introduction	
<i>Pierre Soille</i>	215
Vector- and Tensor-Valued Descriptors for Spatial Patterns	
<i>Claus Beisbart, Robert Dahlke, Klaus Mecke, Herbert Wagner</i>	238
Computational Topology for Point Data: Betti Numbers of α-Shapes	
<i>Vanessa Robins</i>	261

The Euler Number of Discretized Sets
– On the Choice of Adjacency in Homogeneous Lattices
Joachim Ohser, Werner Nagel, Katja Schladitz 275

Shape Statistics for Random Domains and Particles
Dietrich Stoyan, Ashot Davtyan, Daulet Turetayev 299

A Survey on Contact Distributions
Daniel Hug, Günter Last, Wolfgang Weil 317

Mark Correlations: Relating Physical Properties to Spatial Distributions
Claus Beisbart, Martin Kerscher, Klaus Mecke 358

Spatial Jump Processes and Perfect Simulation
Kasper K. Berthelsen, Jesper Møller 391

Statistics for Non-sparse Spatially Homogeneous Gibbs
Point Processes
Gunter Döge, Dietrich Stoyan 418

Spatial Statistics of a Turbulent Random Multiplicative Branching Process
Martin Greiner 428

Subject Index 435
