1 Computer Simulations of Undercooled Fluids and Glasses

<i>K. Binder, D. Herzbach, J. Horbach, M.H. Müser</i>	1
1.1 Introduction	1
1.2 A Tutorial Review of the MD Technique	4
1.2.1 The Verlet Algorithm	4
1.2.2 How to Estimate Intensive Thermodynamic Variables from Microcanonical MD Runs: Realization of Other Ensembles	7
1.2.3 Diffusion, Hydrodynamic Slowing Down, Einstein and Green-Kubo Relations	9
1.3 A Comparative Test of Model Potentials for Silica	12
1.4 Simulations of Molten and Glassy Silicon Dioxide	23
1.5 Mixtures of Silicon Dioxide with Sodium Oxide and Aluminium Oxide	27
1.6 Conclusions	29
References	30

2 Simulation of Inorganic Nanotubes

<i>A.N. Engashin, S. Gemming, G. Seifert</i>	33
2.1 Introduction	33
2.2 Design of Inorganic Nanotubes	34
2.3 General Criteria for the Stability of Inorganic Nanotubes	38
2.4 Theoretical Prediction of the Properties of Non-Carbon Nanotubes	40
2.4.1 Nanotubes of the IVA Group Elements	41
2.4.2 Nanotubes of the VA Group Elements	43
2.4.3 Nanotubes of Boron and Borides	43
2.4.4 Nanotubes of Boron Nitride and its Analogues	45

2.4.5	Nanotubes of Chalcogenides	47
2.4.6	Nanotubes of Oxides	50
2.5	Conclusion	54
	References	55

3 Spintronics: Transport Phenomena in Magnetic Nanostructures

<i>P. Zahn</i>	59
3.1 Introduction	59
3.2 Magnetism in Nanostructures	61
3.2.1 Magnetism in Reduced Dimensions	61
3.2.2 First Principals Computational Scheme	62
3.2.3 Magnetic Interlayer Exchange Coupling	64
3.3 Transport Phenomena	66
3.3.1 Transport Theory	66
Diffusive and Coherent Transport Regime.....	67
Boltzmann Theory	68
Residual Resistivity	69
Landauer Theory	70
3.3.2 Giant Magnetoresistance	72
Basics	72
Microscopic Origin	73
Applications	77
3.3.3 Tunneling Magnetoresistance	78
Basics	78
Microscopic Origin	80
Applications	85
References	86

4 Theoretical Investigation of Interfaces

<i>S. Gemming, M. Schreiber</i>	91
4.1 Interfaces – Boundaries Between Two Phases.....	91
4.1.1 Introduction	92
4.1.2 Interactions	95
Coulomb Interaction	95
Elastic Interaction	96
Electron Transfer	97
Pauli Repulsion	98
Image Charge Interaction	98
4.2 Theoretical Methods	98
4.2.1 Theory of the Electronic Structure.....	99
Density-Functional Theory.....	99
Computational Details of Bulk State Calculations	100
Density-Functional Tight-Binding Approaches	100

4.2.2	Classical Modelling	101
	Image-Charge Models	101
	Effective Many-Body Potentials	102
	Ionic Models	103
4.3	Homophase Boundaries	104
4.3.1	Pristine Boundaries	105
4.3.2	Non-Stoichiometric and Doped Boundaries	108
4.4	Heterophase Boundaries	109
4.4.1	Wetting and Growth of Metal Layers	110
4.4.2	Metal-Ceramic Boundaries	112
4.4.3	Reactive Metal-Semiconductor Interfaces	116
4.5	Summary and Outlook	118
	References	119

5 Electronic Structure and Transport for Nanoscale Device Simulation

	<i>A. Trellakis, P. Vogl</i>	123
5.1	Introduction	123
5.2	Electronic Structure of Semiconductors	125
5.2.1	Bloch Theory and the Band Structure	125
5.2.2	The k-p-Approximation	127
5.2.3	Conduction and Valence Band Models	128
5.3	Heterostructures	130
5.3.1	The Envelope Function Approximation	130
5.3.2	Elastic Deformation and Strain	131
5.3.3	Carrier Densities at Non-Zero Temperature	132
5.3.4	Charge Distributions and the Poisson Equation	134
5.4	Carrier Transport in Nanostructures	135
5.4.1	Classical Ballistic Transport	135
5.4.2	Scattering and the Boltzmann Equation	136
5.4.3	The Drift-Diffusion Equations	138
5.4.4	Quantum Corrected Drift-Diffusion	139
5.4.5	Quantum Ballistic Transport	140
5.5	The nextnano ³ Simulation Package	141
5.5.1	Capabilities Overview	141
5.5.2	Numerical Methods	142
5.5.3	Example Application	144
	References	145

6 Metallic Nanocrystals and Their Dynamical Properties

	<i>Jens-Boie Suck</i>	147
6.1	Introduction	147
6.2	Production of Nanocrystalline Materials	150
6.3	Characterization of Nanocrystalline Materials	155

6.4	Some General Properties of Grains and Grain Boundaries of Nanocrystals	158
6.5	Some Examples of the Special Properties of Nanocrystals	160
6.5.1	Melting Temperature	160
6.5.2	Some Magnetic Properties of Nanocrystalline Materials	161
6.5.3	Some Mechanical Properties of Nanocrystalline Materials	164
6.6	Vibrational Properties of Metallic Nanocrystalline Materials	168
6.6.1	General Remarks on the Atomic Dynamics of Metallic Nanocrystals	168
6.6.2	Phonon Confinement	171
6.6.3	Grain-Size Dependence of the Atomic Dynamics	172
6.6.4	Comparison with the Atomic Dynamics of Metallic Nanocrystals and the Related Amorphous Solids	175
6.6.5	Specific Investigations Concerning the Contribution of the Grain Boundaries and Surfaces to the Observed Spectra	176
