Contents

Random Media and Spin Glasses: An Introduction into Some Mathematical Results and Problems

<i>Erwin Bolthausen</i>	1
1 Introduction	1
2 The Basic Mathematical Models	3
3 The Sherrington–Kirkpatrick Model	6
3.1 Basic Properties of the SK-Model	7
3.2 The Replica Computation	9
3.3 The Parisi Ansatz	12
4 Mathematically Rigorous Results for the SK-Model	16
4.1 Guerra’s Interpolation Method	16
4.2 Mathematical Variants of the Cavity Method	20
5 The Random Energy Models	23
5.1 The REM	23
5.2 The Generalized Random Energy Model	26
5.3 The Aizenman–Sims–Starr Proof of Guerra’s Bound of the SK Free Energy	30
6 Some Open Problems: Ultrametricity and Chaos	35
7 Other Models: Some Comments about the Perceptron	39
8 Dynamic Problems and Aging	41
References	43

Spin Glasses: A Perspective

<i>David Sherrington</i>	45
1 Introduction	45
2 Random Magnetic Alloys	45
2.1 More Details	47
3 Discontinuous Transitions	55
4 Beyond Magnetic Alloys	56
4.1 Complex Many-Body Problems	56

5	Dynamics	58
5.1	Examples	59
6	Conclusion	60
7	Acknowledgements	61
	References	61

Mean Field Models for Spin Glasses: Some Obnoxious Problems

	<i>Michel Talagrand</i>	63
1	Introduction	63
2	Guerra's Replica-Symmetric Bound	66
3	Guerra's Broken Replica-Symmetry Bound	70
4	The Ultrametricity Conjecture	75
5	The Chaos Problem	77
	References	80

Much Ado about Derrida's GREM

	<i>Anton Bovier and Irina Kurkova</i>	81
1	Introduction	81
1.1	History of the Models	82
1.2	Geometry of Gibbs Measures	85
1.3	Point Process of Extremes	87
1.4	Organisation of the Paper	88
2	Convergent Point Processes Associated to the GREM	88
3	GREM: Detailed Analysis	92
3.1	Fluctuations of the Partition Function	92
3.2	Gibbs Measure: Approach via Ruelle's Probability Cascades	94
3.3	Distribution of the Overlaps	95
3.4	Ghirlanda-Guerra Identities	96
3.5	Empirical Distance Distribution Function $\mathcal{K}_\beta$	99
4	CREM: Implicit Approach	99
4.1	Maximum of the Hamiltonian. Limit of the Free Energy	99
4.2	Two-Replicas Ultrametric Distance Distribution Function	101
4.3	Ghirlanda-Guerra Identities	101
4.4	Marginals of $\mathcal{K}_\beta$ in Terms of Ruelle's Probability Cascades	102
5	Genealogies and Neveu's Branching Process	103
5.1	Problems with the Explicit Description of Limiting Gibbs Measures	103
5.2	Genealogical Map of a Flow of Probability Measures	104
5.3	Coalescent Associated with a Flow of Probability Measures	106
5.4	Finite N Setting for the CREM	106
5.5	Genealogy of a Continuous State Branching Process	108
5.6	Main Result	109
5.7	Coalescence and Ghirlanda-Guerra identities	110
	References	113

Dynamics for Spherical Models of Spin-Glass and Aging

<i>Alice Guionnet</i>	117
1 Introduction	117
2 Spherical Sherrington–Kirkpatrick Model	121
3 Spherical p -spins Model	132
4 Future problems	141
References	142

Local vs. Global Variables for Spin Glasses

<i>Charles M. Newman and Daniel L. Stein</i>	145
1 Local Variables and Thermodynamic Limits	145
2 Nearest-Neighbor Ising Ferromagnets	148
3 Finite-Range and Infinite-Range Spin Glasses	149
4 A New Global Order Parameter for Spin Glasses?	151
5 What are Metastates, Anyway?	155
References	157

Short-Range Spin Glasses: Results and Speculations

<i>Charles M. Newman and Daniel L. Stein</i>	159
1 Introduction	160
2 The Trinity of Scenarios	161
2.1 Heuristic Description	162
2.2 Description via the Metastate	164
3 Replica Symmetry Breaking for Short-Range Models	166
4 Wild Possibilities	168
4.1 Phase Transition Without Broken Spin–Flip Symmetry	169
4.2 Highly Chaotic Temperature Dependence	172
References	174
