

Pierre Meystre · Murray Sargent III

Elements of Quantum Optics

Fourth Edition

With 124 Figures

 Springer

Contents

1	Classical Electromagnetic Fields	1
1.1	Maxwell's Equations in a Vacuum	2
1.2	Maxwell's Equations in a Medium	4
1.3	Linear Dipole Oscillator	10
1.4	Coherence	17
1.5	Free-Electron Lasers	22
	Problems	32
2	Classical Nonlinear Optics	35
2.1	Nonlinear Dipole Oscillator	35
2.2	Coupled-Mode Equations	38
2.3	Cubic Nonlinearity	40
2.4	Four-Wave Mixing with Degenerate Pump Frequencies	43
2.5	Nonlinear Susceptibilities	48
	Problems	50
3	Quantum Mechanical Background	51
3.1	Review of Quantum Mechanics	52
3.2	Time-Dependent Perturbation Theory	64
3.3	Atom-Field Interaction for Two-Level Atoms	71
3.4	Simple Harmonic Oscillator	82
	Problems	86
4	Mixtures and the Density Operator	93
4.1	Level Damping	94
4.2	The Density Matrix	98
4.3	Vector Model of Density Matrix	106
	Problems	112
5	CW Field Interactions	117
5.1	Polarization of Two-Level Medium	117
5.2	Inhomogeneously Broadened Media	124
5.3	Counterpropagating Wave Interactions	129
5.4	Two-Photon Two-Level Model	133
5.5	Polarization of Semiconductor Gain Media	139
	Problems	146

6	Mechanical Effects of Light	151
6.1	Atom-Field Interaction	152
6.2	Doppler Cooling	157
6.3	The Near-Resonant Kapitza-Dirac Effect	158
6.4	Atom Interferometry	166
	Problems	169
7	Introduction to Laser Theory	171
7.1	The Laser Self-Consistency Equations	172
7.2	Steady-State Amplitude and Frequency	175
7.3	Standing-Wave, Doppler-Broadened Lasers	181
7.4	Two-Mode Operation and the Ring Laser	187
7.5	Mode Locking	191
7.6	Single-Mode Semiconductor Laser Theory	194
7.7	Transverse Variations and Gaussian Beams	198
	Problems	203
8	Optical Bistability	209
8.1	Simple Theory of Dispersive Optical Bistability	210
8.2	Absorptive Optical Bistability	215
8.3	Ikeda Instability	217
	Problems	220
9	Saturation Spectroscopy	223
9.1	Probe Wave Absorption Coefficient	224
9.2	Coherent Dips and the Dynamic Stark Effect	230
9.3	Inhomogeneously Broadened Media	238
9.4	Three-Level Saturation Spectroscopy	241
9.5	Dark States and Electromagnetically Induced Transparency	244
	Problems	247
10	Three and Four Wave Mixing	249
10.1	Phase Conjugation in Two-Level Media	250
10.2	Two-Level Coupled Mode Coefficients	253
10.3	Modulation Spectroscopy	255
10.4	Nondegenerate Phase Conjugation by Four-Wave Mixing	259
	Problems	260
11	Time-Varying Phenomena in Cavities	263
11.1	Relaxation Oscillations in Lasers	264
11.2	Stability of Single-Mode Laser Operation	267
11.3	Multimode Mode Locking	271
11.4	Single-Mode Laser and the Lorenz Model	274
	Problems	276

12 Coherent Transients	281
12.1 Optical Nutation	282
12.2 Free Induction Decay	284
12.3 Photon Echo	285
12.4 Ramsey Fringes	288
12.5 Pulse Propagation and Area Theorem	289
12.6 Self-Induced Transparency	293
12.7 Slow Light	295
Problems	296
13 Field Quantization	299
13.1 Single-Mode Field Quantization	299
13.2 Multimode Field Quantization	302
13.3 Single-Mode Field in Thermal Equilibrium	304
13.4 Coherent States	307
13.5 Coherence of Quantum Fields	311
13.6 Quasi-Probability Distributions	314
13.7 Schrödinger Field Quantization	318
13.8 The Gross-Pitaevskii Equation	322
Problems	324
14 Interaction Between Atoms and Quantized Fields	327
14.1 Dressed States	328
14.2 Jaynes-Cummings Model	333
14.3 Spontaneous Emission in Free Space	338
14.4 Quantum Beats	344
Problems	348
15 System-Reservoir Interactions	351
15.1 Master Equation	353
15.2 Fokker-Planck Equation	362
15.3 Langevin Equations	364
15.4 Monte-Carlo Wave Functions	369
15.5 Quantum Regression Theorem and Noise Spectra	374
Problems	379
16 Resonance Fluorescence	383
16.1 Phenomenology	384
16.2 Langevin Equations of Motion	387
16.3 Scattered Intensity and Spectrum	390
16.4 Connection with Probe Absorption	396
16.5 Photon Antibunching	400
16.6 Off-Resonant Excitation	403
Problems	405

17 Squeezed States of Light	409
17.1 Squeezing the Coherent State	410
17.2 Two-Sidemode Master Equation	414
17.3 Two-Mode Squeezing	417
17.4 Squeezed Vacuum	421
Problems	425
18 Cavity Quantum Electrodynamics	427
18.1 Generalized Master Equation for the Atom-Cavity System ...	428
18.2 Weak Coupling Regime	430
18.3 Strong Coupling Regime	432
18.4 Velocity-Dependent Spontaneous Emission	435
18.5 Input-Output Formalism	440
Problems	443
19 Quantum Theory of a Laser	445
19.1 The Micromaser	447
19.2 Single Mode Laser Master Equation	454
19.3 Laser Photon Statistics and Linewidth	460
19.4 Quantized Sidemode Buildup	468
Problems	470
20 Entanglement, Bell Inequalities and Quantum Information	473
20.1 Einstein-Podolsky-Rosen Paradox and Bell Inequalities	473
20.2 Bipartite Entanglement	477
20.3 The Quantum Beam Splitter	480
20.4 Quantum Teleportation	483
20.5 Quantum Cryptography	484
20.6 Toward Quantum Computing	486
Problems	488
References	489
Index	499
