

Contents

General introduction.....	1
Caraway: Basic facts.....	1
Breeding goals and breeding methods in caraway breeding.....	1
Available caraway germplasm.....	4
Utilization of molecular-genetic methods in caraway breeding.....	5
Objectives.....	6
Chapter 1) On genetic diversity in caraway: Genotyping of a large germplasm collection ¹	8
Chapter 2) Breeding synthetic varieties in annual caraway: observations on the outcrossing rate in a polycross using a high-throughput genotyping system ²	27
Chapter 3) On heterosis, inbreeding depression and general combining ability in annual caraway (<i>Carum carvi</i>) ³	43
General discussion.....	58
Significance of results for future caraway breeding and prospects of achieving breeding goals.....	58
Scientific advance, limitations and future prospects of genetic analyses within caraway breeding research.....	61
Summary.....	65
Zusammenfassung.....	67
References.....	70
