

Contents

1	Introduction	1
1.1	Research Goals	4
1.2	Methodology	5
1.3	Structure of the Thesis	6
2	Requirements for Production Scheduling in Flexible Manufacturing	9
2.1	Foundations of Flexible Job-Shop Scheduling Problems	9
2.2	Requirement Analysis of Flexible Scheduling Solutions	12
2.2.1	Influences on Warehouse Control Systems	12
2.2.2	Influences on Manufacturing Control Systems	16
2.2.3	Derived and Ranked Requirements	21
2.3	State of the Art: Approaches to Solve Job-Shop Scheduling Problems	23
2.3.1	Conventional Scheduling Solutions	24
2.3.2	Reinforcement Learning Scheduling Solutions	26
2.4	Identification of the Research Gap	27
2.5	Contribution of this Work: Extended Flexible Job-Shop Scheduling Problem	29
3	Reinforcement Learning as an Approach for Flexible Scheduling	31
3.1	Understanding the Foundations: Formalization as a Markov Decision Process	31
3.1.1	Agent-Environment Interaction	32
3.1.2	Policies and Value Functions	34
3.1.3	Challenges Arising in Reinforcement Learning	36

3.2	Deep Q-Learning	38
3.2.1	Temporal Difference Learning and Q-Learning	38
3.2.2	Deep Q-Network	39
3.2.3	Loss Optimization	41
3.3	State of the Art: Cooperating Agents to Solve Complex Problems	42
3.3.1	Multi-Agent Learning Methods	44
3.3.2	Learning in Cooperative Multi-Agent RL Setups	46
3.4	Summary	48
4	Concept for Multi-Resources Flexible Job-Shop Scheduling	51
4.1	Concept for Agent-based Scheduling in FMS	51
4.1.1	Overall Concept	52
4.1.2	Job Specification	52
4.1.3	Petri Net Simulation	53
4.2	Formalization as a Markov Decision Process	55
4.2.1	Action Designs	56
4.2.2	State Designs	57
4.2.3	Reward Design	62
4.3	Considered Flexible Manufacturing System	66
4.4	Evaluation of the Technical Functionalities	72
4.5	Summary	74
5	Multi-Agent Approach for Reactive Scheduling in Flexible Manufacturing	75
5.1	Training Set-up	76
5.2	Specification of the Reward Design	80
5.3	Evaluation of Suitable Training Strategies	85
5.3.1	Evaluation of MARL Algorithms	86
5.3.2	Selection of MARL Learning Methods	88
5.3.3	Evaluation of Parameter Sharing and Centralized Learning	89
5.4	Training Approach to Present Situations	91
5.5	Summary	97
6	Empirical Evaluation of the Requirements	99
6.1	Generalization to Various Products and Machines	100
6.2	Achieving the Global Objective	103
6.2.1	Comparison of Dense and Sparse Global Rewards	103
6.2.2	Cooperative Behavior	106

6.3	Benchmarking against Heuristic Search Algorithms	108
6.3.1	Evaluation for Unknown and Known Situations	109
6.3.2	Evaluation of Real-time Decision-Making	111
6.4	Consolidated Requirements Evaluation	112
6.5	Summary	115
7	Integration into a Flexible Manufacturing System	117
7.1	Acceptance Criteria for the Integration Concept	118
7.2	Integration Concept of MARL Scheduling Solution	119
7.2.1	Integration in the MES	119
7.2.2	Information Exchange	122
7.3	Design Cycle	123
7.3.1	Functioning Scheduling	123
7.3.2	Efficient Production Flow	123
7.3.3	Handling of Unforeseen Events	126
7.3.4	Handling of New Machine Skills	127
7.3.5	Handling of New Machines	129
7.4	Summary	132
8	Critical Discussion and Outlook	135
9	Summary	139
	Bibliography	141
