Abstract	i
Kurzfassung	iii
1 Motivation and Contributions	1
1.1 Wireless Technologies for Body-Centric Applications	1
1.2 Localization in Sensor Networks	4
1.3 Posture and Activity Recognition	6
1.4 Contributions, Publications, and Structure	7
1.5 Acknowledgments and Joint Work	10
2 Coil Antennas and Magneto-Inductive Coupling	13
2.1 Inductive Coupling and Limiting Assumptions	13
2.2 Electrically Small and Thin-Wired Coils	15
2.3 Inductive Coupling in a Network of Coil Antennas	19
3 Fundamental Theory	21
3.1 Circuit-Based Multiport Model	21
3.2 Noise Model	26
3.3 Matching, Equivalent Model, and Further Assumptions	28
3.4 Parameter Estimation and Cramér-Rao Lower Bound	32
4 Range Estimation and Localization	37
4.1 Range Estimation for Active and Passive Agents	37
4.2 Scaling Behavior for Practical Design Parameters	39
4.3 Impact of Anchor Placement and Density	42
4.4 Impact of Agent Placement	46
4.5 Conclusions	48
5 Passive Relays and Relay-Aided Localization	51
5.1 Incorporation of Passive Relay Coils	52
5.2 Localization Impact of Passive Relays for Selected Topologies	53
5.3 Load Switching of Passive Relays	60
5.4 Localization Performance for Random Relay Topologies	64

5.5	Conclusions	70
6	Cooperative Localization	73
6.1	Weakly-Coupled Channel Gain and Noise Model	74
6.2	Position Error Bounds	76
6.3	Cooperative and Non-Cooperative Deployment Estimators	78
6.4	Performance Evaluation for IoT Topologies	82
6.5	Conclusions	90
7	Topology Classification Using Purely Passive Tags	93
7.1	Topology Classification System Concept	93
7.2	General Design Challenges and Considerations	94
7.3	Possible Use Cases for Topology Classification	95
7.4	Simplified System Model	96
8	Human Posture Recognition: A Case Study	99
8.1	Body Models and Postures	99
8.2	Noise Models	101
8.3	Coil Types and Placement	107
8.4	Data Set Generation and Classifiers	114
8.5	Performance Evaluation	117
8.6	Conclusions	122
9	Posture Recognition Demonstrator	125
9.1	Demonstrator and Measurement Setup	125
9.2	Single-Frequency System	129
9.3	Multi-Frequency System	134
9.4	Conclusions	140
10	Summary	147
	APPENDICES	149
A	System Model Derivatives and Fisher Information	149
A.1	Relay-Specific Derivatives	152
B	Trace Maximization for Pairwise Distance Estimates	155

C Preliminary Measurements of an Anchor-Tag Coil Pair	157
C.1 General Detuning Observations for an Anchor-Tag Pair	158
C.2 Impact of Distorting Objects	160
C.3 Noise Characterization	161
Mathematical Notation and Operators	163
List of Acronyms	164
Bibliography	167
