Contents

1. **Nonlinear Waves in Homogeneous Media** 1
   - 1.1 Preliminaries 1
     - 1.1.1 Equations of Motion of a Homogeneous Nonlinear Rod 1
     - 1.1.2 Riemann Invariants and Characteristics 2
     - 1.1.3 Simple Wave Equation 3
     - 1.1.4 Conditions on the Strong Shock 4
     - 1.1.5 Stability Condition for the Strong Shock 5
     - 1.1.6 Weak Shocks 7
   - 1.2 Nonlinear Hyperbolic Equations of the First Order 7
     - 1.2.1 Conditions on the Shock 7
     - 1.2.2 Constancy of the Integrals of Solutions 8
     - 1.2.3 Solution of the Boundary Value Problem Method of Characteristics 9
     - 1.2.4 Wave Breaking 11
     - 1.2.5 Principle of Equal Areas 12
     - 1.2.6 An Example 13
     - 1.2.7 Ordinary Differential Equation for a Shock Propagating into an Undisturbed Domain 14
   - 1.3 Exact Factorization of the Nonlinear Wave Equation with Constant Coefficients 15
     - 1.3.1 Introductory Observations 15
     - 1.3.2 Factorization Theorem for the Wave Equation for Stress 16
     - 1.3.3 Difference Between Linear and Nonlinear Factorization 17
     - 1.3.4 Factorization Theorem for the Deformation Wave Equation 18
     - 1.3.5 Earnshaw's Theorem 18
     - 1.3.6 Generalization of Earnshaw's Theorem 19
     - 1.3.7 A Boundary Value Problem Posed in Terms of Displacements 20
   - 1.4 Shock-Wave in a Simple System 22
     - 1.4.1 Formulation of the Problem 22
     - 1.4.2 Nonconformity of the Single-Wave Equation to the Shock Condition 23

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

1.4.3 Transformation of the Single-Wave Equation. Integral Equation for $g(\sigma)$ Generating the Transformation 24
1.4.4 Construction of the Function $g(\sigma)$ 25
1.4.5 Discussion of the Results 27
1.5 The Shock-Wave in a Simple System (Continuation) 30
1.5.1 Application of the Principle of Equal Areas 30
1.5.2 Application of Euler's Method 31

2. Nonlinear Short Waves of Finite Amplitude in Inhomogeneous Media 33
2.1 Asymptotic Factorization of the Nonlinear Wave Equation with a Variable Coefficient 33
2.1.1 Representation of the Nonlinear Wave Equation with a Variable Coefficient 33
2.1.2 Formulation of the Boundary Value Problem. Conditions of Asymptotic Factorization 37
2.1.3 Single-Wave Solution of the Boundary Value Problem 38
2.2 When is the Factorization Exact? 39
2.2.1 Nonlinear Case 39
2.2.2 Linear Case 40
2.3 Asymptotic Factorization of the General Nonlinear Wave Equation with Variable Coefficients 42
2.3.1 Preliminary Notes 42
2.3.2 Notation 42
2.3.3 Representation of the General Nonlinear Wave Equation with Variable Coefficients 43
2.3.4 Formulation of the Boundary Value Problem Conditions of Asymptotic Factorization 46
2.3.5 Linear Case 47
2.4 Evolution of Maximal Amplitude of the Stress Wave 48
2.4.1 Formulation of the Problem 48
2.4.2 Equation for Maximal Amplitudes 48
2.4.3 The Curve of Maximums as a Characteristic 49
2.5 Propagation of a Stress Wave in a Homogeneous Nonlinear Elastic Rod Located in the Gravity Field 50
2.5.1 Formulation of the Problem 50
2.5.2 Uselessness of Exact Factorization 51
2.5.3 Asymptotic Factorization 52
2.5.4 Single-Wave Solution of the Problem 53

3. **Nonlinear Waves in Media with Memory** 55
3.1 Hereditary Elasticity 55
3.1.1 Linear Equations 55
3.1.2 Nonlinear Equations 56
3.2 Small Quadratic Nonlinearity 58
3.2.1 Asymptotic Factorization of the Nonlinear Wave Equation with Memory 58
3.2.2 Why Can't the Factorization be Exact? 60
3.2.3 Single-Wave Equation 60
3.2.4 Condition on the Shock for the Stress Wave 61
3.2.5 New Notation 62
3.3 Continuous Stationary Profile Waves and Nonzero Solutions of Homogeneous Integral Volterra Equations 63
3.3.1 Waves Propagating in an Undisturbed Medium 63
3.3.2 Integral Equation for the Wave of Stationary Profile 63
3.3.3 Estimate of the Solution of the Integral Equation .. 64
3.3.4 Existence of Stationary Profile Waves. Special Case 66
3.3.5 Existence of the Wave of Stationary Profile. General Case 69
3.3.6 The Exponential Kernel 71
3.3.7 The Simplest Oscillatory Kernel 72
3.3.8 A More Complicated Oscillatory Kernel 73
3.3.9 Waves Propagating in a Prestressed Medium 75
3.3.10 The Exponential Kernel 77
3.4 Stationary Profile Shock-Waves and Self-Coordinated Integral Volterra Equations 80
3.4.1 Waves Propagating in an Undisturbed Medium 80
3.4.2 Integral Equation for Stationary Profile Waves 81
3.4.3 Estimate of the Solution of the Integral Equation .. 82
3.4.4 Existence of Stationary Profile Shock-Waves 83
3.4.5 The Power Kernel 85
3.4.6 The Exponential Kernel 86
3.4.7 Waves Propagating in a Prestressed Medium 87
3.5 Waves Tending to a Stationary Profile 89
3.5.1 Intuitive Approach 89
3.5.2 Rok's Method 92
3.6 Nonstationary Waves Analog of the Landau-Whitham Formula 93
3.6.1 Formulation of the Problem 93
3.6.2 Linear Case 93
3.6.3 Case of Small Quadratic Nonlinearity 94
3.6.4 Estimate of Quality of the Approximate Solution .. 95
3.6.5 Single-Wave Equation for Deformation 96

3.6.6 Single-Wave Equation for Displacement 97
3.6.7 A Boundary Value Problem Posed in Terms of Displacement 98
3.7 General Nonlinearity. Further Factorization Theorems for Nonlinear Wave Equations with Memory 99
3.7.1 Preliminary Notes 99
3.7.2 The Exact Factorization Theorem 99
3.7.3 The Asymptotic Factorization Theorem 101
3.7.4 Waves in Rods in the Presence of External Friction 104
3.8 Nonstationary Waves for an Exponential Memory Function 105
3.8.1 Formulation of the Problem 105
3.8.2 Derivation of a Single-Wave Differential Equation 106
3.8.3 The Analytic Solution in a Smoothness Domain ... 106
3.8.4 Wave Breaking 107
3.8.5 Case of Small Amplitudes. Asymptotic Analysis of the Shock-Wave 109
3.9 Reflection of a Wave from the Boundary Between Linear Elastic and Nonlinear Hereditary Media ... 111
3.9.1 Formulation of the Boundary Value Problem 111
3.9.2 Reduction of the Problem to an Integro-Functional Equation 112
3.9.3 Solution of the Integro-Functional Equation 114
3.10 The Exactly Factorizable Linear Wave Equation with Memory and a Variable Coefficient 115
3.10.1 Factorization Theorem 115
3.10.2 Solution of the Boundary Value Problem 116
