Chapter 1. The Chemistry of Starches and Sugars Present in Food

<i>M. W. Kearsley and P. J. Sicard</i>	1
Introduction	1
Natural Carbohydrates	2
Granular Starch Modifications	8
Extensive Chemical and Enzymatic Hydrolysis of Starch	16
Simple Natural Carbohydrates and Their Derivatives	21
Conclusions	28

Chapter 2. Structure of Starch in Food: Interaction of Starch and Sugars with Other Food Components

<i>P. Würsch</i>	35
Introduction	35
Gelatinisation, Retrogradation and Resistant Starch	35
Changes in Starch During and After Technological Treatments	37
Protein–Starch Interaction	39
Starch–Lipid Interaction	40
Interaction of Starch and Sugars with Minerals	41
Sugars and Protein	41
Conclusions	44
Addendum	45

Chapter 3. The Digestion of Starches and Sugars Present in the Diet

<i>B. Flourié</i>	49
Digestion of Dietary Carbohydrates	49
Assessment of Dietary Carbohydrate Digestibility	51
Factors Affecting the Digestion of Dietary Carbohydrates	56
Conclusion	61

Chapter 4. The Role of the Gut Microflora in the Digestion of Starches and Sugars: With Special Reference to Their Role in the Metabolism of the Host, Including Energy and Vitamin Metabolism

<i>D. A. T. Southgate</i>	67
Classification of Carbohydrates in Foods	68
Sugars	68
Starches	70
The Intestinal Microflora	73
Implications of the Interactions with the Microflora	78
Conclusions	80

Chapter 5. Dietary Carbohydrate and the Kinetics of Intestinal Functions in Relation to Hexose Absorption

<i>R. J. Levin</i>	89
Introduction	89
The Handling of Carbohydrate by the Mammalian Small Intestine	90
Transport Mechanisms for the Monosaccharides	91
Characterisation of Transport Mechanisms by Kinetic Analysis	96
Fructose Absorption	100
Are There Any Remaining Controversies in Hexose Absorption?	101
Absorption of Free Glucose and Galactose Compared with Those Produced from Disaccharides	104
Adaptations Induced by Changes in Dietary Carbohydrate ...	106
Conclusion	111

Chapter 6. The Role of Dietary Starches and Sugars and Their Digestive End Products on Gastrointestinal Hormone Release

<i>T. L. Peeters</i>	119
Gastrointestinal Hormones	119
Release of Gastrointestinal Hormones by Carbohydrates	121
Conclusions	127

Chapter 7. The Metabolism of Sugars and Starches

<i>V. Marks and P. R. Flatt</i>	135
Introduction	135
Metabolism: General Considerations	136
Glucose Metabolism	137
Starch	137
Glucose: Whole Body Economy	138
Galactose	139
Fructose	141
Fructose and the Liver	141
Fructose and Adipose Tissue	142

Fructose Metabolism and Hyperuricaemia	144
Polyols	144
Carbohydrate Metabolism and Vitamins	145
Non-enzymatic Glycosylation	146

Chapter 8. Glycaemic Responses to Sugars and Starches

<i>V. Marks</i>	151
Introduction	151
Reasons for Measuring Blood Glucose Concentrations	152
Factors Affecting Glycaemic Responses to Meals	153
Glycaemic Response to Sugars and Starches in Solution	158
Glycaemic Response to Sugars in Solution Versus Solid Food	159
Blood Glucose Responses to Meals	160
Acute and Chronic Glycaemic Responses to Sugary and Starchy Diets	160
Reactive Hypoglycaemia	162
Comment	162
Summary and Conclusions	163

Chapter 9. The Relationship Between Lipid Metabolism and Dietary Starches and Sugars

<i>I. Macdonald</i>	169
Plasma Lipids	169
Adipose Tissue	173
Liver Lipid	174
Conclusion	175

Chapter 10. The Effects on Energy Input and Output of Dietary Starches and Sugars

<i>I. Macdonald</i>	181
History	181
Effects on Respiratory Quotient	181
Effects on Dietary-Induced Thermogenesis	182
Effects on Body Weight	184
Possible Explanations for the Differences Between the Effects of Dietary Carbohydrates on Body Weight Loss	186
Effects on Carbohydrates on Energy Input	187
Conclusions	187

Chapter 11. The Influence of Starch and Sugar Intake on Physical Performance

<i>C. Williams</i>	193
Physical Performance	193
Fatigue	195
Dietary Carbohydrate Intake and Physical Performance	196
Starch and Sugar Intake and Performance	199

Pre-exercise Carbohydrate Intake	203
Carbohydrate Intake During Exercise	206
Summary	208

Chapter 12. Insulin, Glucagon and Catecholamine Responses to the Ingestion of Various Carbohydrates

<i>M. Laville, S. Picard, S. Normand and J. P. Riou</i>	213
Regulation of Glycaemia During an Oral Glucose Load	213
Acute Insulin Response to Carbohydrates	215
Acute Glucagon Response to Carbohydrates	217
Acute Catecholamine Response to Carbohydrates	218
Long-term Effect of Carbohydrate Feeding on the Metabolic and Hormonal Response to a Glucose Load	219
Future Research and Overview	219

Chapter 13. The Effect of Dietary Starches and Sugars on Satiety and on Mental State and Performance

<i>D. A. Booth</i>	225
Satiety Effects of Carbohydrates	225
Measurement of Satiety and its Mechanisms	226
Satiety Effects of Sugar Solutions	228
Satiety Effects of Disguised Maltodextrin	230
Satiety Effects of Sweetness and of Energy Metabolism	231
An Overview of Carbohydrate Actions in Satiety	233
Sugary Versus Starchy Foods	236
Practical Implications of Satiety Effects	237
Improved Analysis of Satiety Mechanisms	239
Effects on Mental Performance and Mood	242

Subject Index	251
